In September 2006, the U.S. Consumer Product Safety Commission issued recalls on
many lithium computer batteries due to overheating, including instances of smoke
and fire. Go to www.cpsc.gov and search for "lithium computers" (without the
quotes) and you will find many such recalls. One recall notice
http://www.cpsc.gov/CPSCPUB/PREREL/prhtml06/06270.html said:

Hi folks.

>From the look of the article cited above, the noteworthy part for us hams is

"the TSA is worried about loose, spare batteries. These are batteries with
uncovered electrical contacts, which, if touched by other metal objects
could cause an explosion and fire during a flight"

Now, non-technical folk may well leave battery terminals exposed but I would
bet that (hopefully) every ham is wise enough to cover battery terminals so
they cannot be shorted together. Lithium batteries may be a (relatively) new
hazard but NiCd batteries have been around for a long time and they are also
a hazard if their terminals are shorted.

Happy travelling.

My only "loose" Lithium-Ion batteries are my backup camera batteries
which are shipped in a snap-in plastic case that by design covers the
exposed terminals, and in those cases they stay until put into
service. I use similar cases from a kitchen-ware store for spare
Ni-Cad batteries as well.

9. ARS License Numbers for December 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2008-01-05 21:17:07 UTC
From: N2EY@aol.com
Message-ID: <72b4f2fc-21d6-4179-8d2d-a9505dbd7641@m77g2000hsc.googlegroups.com>
Source record: 3380

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of December 2, 2007:

Novice - 20,634 (3.1%)
Technician - 293,165 (44.7%)
Technician Plus - 21,586 (3.3%)
General - 142,579 (21.8%)
Advanced - 65,629 (10.0%)
Extra - 111,806 (17.1%)

Total Tech/TechPlus - 314,751 (48.0%)

Total all classes - 655,399

As of December 9, 2007:

Novice - 20,587 (3.1%)
Technician - 293,520 (44.8%)
Technician Plus - 21,390 (3.3%)
General - 142,608 (21.8%)
Advanced - 65,553 (10.0%)
Extra - 111,852 (17.1%)

Total Tech/TechPlus - 314,910 (48.0%)

Total all classes - 655,510

As of December 22, 2007:

Novice - 20,507 (3.1%)
Technician - 294,270 (44.9%)
Technician Plus - 21,019 (3.2%)
General - 142,713 (21.8%)
Advanced - 65,424 (10.0%)
Extra - 111,991 (17.1%)

Total Tech/TechPlus - 315,289 (48.1%)

Total all classes - 655,924

Changes:

>From May 14, 2000, to February 22, 2007:

What the code enforcement types get vexed about is were you have two different Grounding Electrode Systems (GES) that are not bonded together into a single system. So if you have one concrete encased electrode in your tower base, another concrete encased electrode in your homes footer, and a driven rod array electrode just outside the radio room wall and you do not bond them together into a single GES that is a code violation. It is also a code violation to connect any conductor that carries power and light current to ground at any point in the wiring system that is not at the Service Disconnecting Means (SDM). The SDM is the first switch, breaker, or fused pull out that can be used to disconnect the ungrounded current carrying conductors of the wiring system from the service entry conductors. In most homes this is the main breaker or the main fuse pull out. The code name for the white wire in North American wiring practice is the "Grounded Current Carrying Conductor." In many cases it is also the neutral conductor but that is not always the case. It is that white wire that most of us call the neutral; albeit sometimes mistakenly; that must be connected to the GES at one and only one point. That point is the portion of the service entrance grounded conductor that is between the splices that connect it to the utility company's conductors and the SDM.

A practice that was very popular in the computer industry was to ground the computer equipment power supplies of main frame computers to a new and separate grounding electrode at the computers location. Connecting that ground back to the power service ground was carefully avoided on the belief that doing so would cause ground loops on the signal circuits between the main frame and the associated terminal equipment. Some self qualifying authorities recommended the same approach for radio equipment. That left the earth between the two electrode systems as the only return path for current faulting to ground at the improperly isolated ground equipment. With the resistance to earth of most driven rod electrodes being over fifty ohms the series resistance of such a fault current pathway was often over a hundred ohms. Such a high impedance would limit the fault current flowing back to the utility transformer from whence it came to a flow too small to trip the Over Current Protective Device (OCPD) protecting the faulted circuit. You

then have a situation in which all of the exposed conductive parts of the radio or computer equipment is energized at 120 volts relative to earth or any body that will behave as the earth does electrically. Since it only takes about a third of an ampere to kill a human being the user could be electrocuted without ever tripping the OCPD. Because the danger to life was of a greater concern to code authorities then the difficulties caused by ground loops on signal lines the electronic engineers lost that war with the electrical engineers and the rule forbidding separate grounding electrode systems survived the attempts to remove it from the nations electrical codes.

The good news for us as amateur radio practitioners is that what is safe is also good operating practice. By bonding all of our grounding electrode systems together into a single system we get a better ground for most purposes and we greatly decrease the likelihood of equipment damage or operator injury / death.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

Not a bad idea at all, but some caveats are in order.

The ARS would be a communications avenue that you and your fellow firefighters could use if your normal assigned communications fail. That would be how I would approach it to your board of directors. It's not a bad idea, but here come the caveats.

There has been a misconception among a lot of emergency service providers that the ARS is going to be another tool in their belt. IOW, all the employees are going to get their Technician license, and will use the local repeater in their work.

We'd seen a this in our area, where some folks who have no interest in Amateur radio, or any kind of radio for that matter, have come in and started telling us what we have to do.

We've been working hard at trying to get everyone on the same page here. It hasn't been easy though. We run into a lot of "Everything we do is a matter of life and death, so by definition, we can priority use your system at any time we wish." That is one of those things that is true on a very broad scale, but not true in the details.

In other words, don't try to sell them the idea that Ham radio is going to be a back channel for the department, or that this is new communications channels that are opening up for them. It's for emergency use only, (when operating as you are working) and used in its proper place.

Note this isn't to say that the new hams can't get on the repeater and chat like the rest of us do!

And the other half of the equation is "when there are no other means
of communication available". That includes other radio channels,
cellphones, landlines, and (figuratively) smoke signals. Very few
instances of claiming the exemption turn out to be justified.

15. Seeking advice about crossposted Amateur Radio bulletins

Newsgroup: rec.radio.amateur.moderated
Date: 2008-01-19 05:42:34 UTC
From: rram@panix.com
Message-ID: <fms2gr$5no$1@reader2.panix.com>
Source record: 3386
Cross-posted to: rec.radio.amateur.moderated,uk.radio.amateur,aus.radio.amateur.misc,rec.radio.info

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

Consistent with rec.radio.info's past usage and message traffic, we had resumed collecting and aggregating many popular weekly amateur radio bulletins and crossposting them to the newsgroups. We selected bulletins that were available via E-mail or Web page, had reprint/relay permission, were in the English language, and could be automatically gatewayed to the newsgroups in plain text. These included:

AMSAT Weekly Satellite Report (Amateur Satellite Corporation)
AMSAT News Service Weekly Bulletins (Amateur Satellite Corporation)
WIANews (Wireless Institute of Australia)
DXNL (Deutscher Amateur Radio Club)
IRTS Radio Bulletin (Irish Radio Transmitters Society)
GB2RS News (Radio Society of Great Britain)
SARL News in English (South African Radio League)
The ARRL Letter (American Radio Relay League)
Amateur Radio Newsline (Newsline, Bill Pasternak)
RAC Bulletin (Radio Amateurs of Canada)

(The Ohio/Penn DX Bulletin had continued to be directly posted, via prior arrangement and authorization, during the absence of an active moderation team.)

The original charter of rec.radio.info:

http://www.faqs.org/ftp/usenet/news.announce.newgroups/rec/rec.radio.info

was to serve as a crossposting target for information bulletins, newsgroup charter announcements, and newsgroup Frequently-Asked Questions (FAQ) lists. Implicitly, that rec.radio.info should not "steal" articles from other newsgroups, or require readers to know that rec.radio.info exists and that all bulletins/FAQ's/etc. have been redirected to it. It was also potentially awkward (possibly rude) for us to redirect followup discussion from the FAQ's/bulletins to a newsgroup where the original root article of the thread wasn't posted in the first place. Also, as indicated by its place on the namespace hierarchy (rec.radio.*, not rec.radio.amateur.*), rec.radio.info was not intended to be just an amateur radio newsgroup. Other newsgroups' bulletins that were intended to be crossposted included rec.radio.broadcasting, rec.radio.shortwave, and rec.radio.scanner.

When an article is simultaneously crossposted, only one article is propagated over the networks, and most newsreaders should show it only once. In this way, the rec.radio.info newsgroup becomes an information concentrator of articles that already exist in the news spool, not contributing extra bandwidth or duplication, much like rec.music.info or news.answers. It was also felt that a good test of whether a bulletin was worthwhile to post to the newsgroups was whether or not it was tolerated in a subject-specific "home" newsgroup. When we took over the newsgroup in February of 2007:

http://www.big-8.org/dokuwiki/doku.php?id=nan:2007-02-23-rec.radio.info-announce

we originally sought to continue both the letter and intent of the original charter.

In cooperation with the rec.radio.amateur.moderated newsgroup and moderation team, we chose that newsgroup as the principal crossposting target for general amateur-radio related bulletins. Some members of that moderation team felt that crossposting the bulletins, and allowing followup discussion, could serve as useful discussion starters for their new newsgroup. Due to their size, frequency, and special interest topic, the AMSAT bulletins continued to be crossposted to rec.radio.amateur.space only. The DXNL bulletin was also crossposted to rec.radio.amateur.dx. The country-specific bulletins that had their own country-specific newsgroups were also crossposted to those newsgroups (aus.radio.amateur.misc for WIANews and uk.radio.amateur for GB2RS News).

We commenced a 90-day test of relaying the bulletins, from March to May of 2007, and considered both internal and external feedback. There were no internal objections, though about half of the moderation team wanted a disclaimer at the bottom of each bulletin (to supplement the disclaimers already in the headers of each approved message for the moderated newsgroups). We only received one external objection, from an individual who felt that the ARRL Letter was more of a public-relations and advertising message than a true news bulletin.

Concluding that we had readership support for relaying these bulletins, we then continued to post these bulletins, and as simultaneous crossposts. Starting around October of 2007, the rec.radio.amateur.moderated Moderation Team started to have internal discussion about whether crossposting bulletins to rec.radio.amateur.moderated was worthwhile. Some felt strongly that if posted, they should be posted to rec.radio.info only, and not any other newsgroup, with followups directed either to poster, or possibly even to a newsgroup for which the bulletin was not originally posted. This would be a change of charter for rec.radio.info. Because of this, we decided to have a 90-day test and moratorium, from October 2007 to January 2008, where we would not relay the bulletins and see if anyone noticed or complained. We received no external feedback regarding these bulletins during that time, nor did anyone complain about their absence.

Since our two 90-day tests, one with the bulletins, and one without, were inconclusive with respect to reader feedback, we would like to now explicitly solicit reader feedback at this time in order to make an appropriate decision about the format and target newsgroups of any relayed bulletins. Examples of feedback that would be useful to us would include answers to the following questions:

- Do you read the bulletins?

- Which bulletins do you read?

- Which bulletins, if any, do you feel have inappropriate advertising or public relations content for posting to the newsgroups?

- In what newsgroup do your prefer to read the bulletins first, or read them at all (subject-specific, rec.radio.info, or none)?

- Would you read the bulletins if they were posted to rec.radio.info only?

- Would you be interested in initiating followup discussion based on the contents of the bulletins? To which newsgroups? Via E-mail to the originators?

- Would you be able to follow any followup discussion that was directed to newsgroups other than to which the original bulletins were posted?

We would be most interested in hearing about how *you* personally have read, or intend to read, the bulletins on the Usenet newsgroups, and intend to submit followup discussion (or not). Speculation or demands concerning how others "should" or "should not" read or react to the bulletins would be much less helpful to us. In particular, we wish to avoid expending a lot of ongoing effort to relay bulletins that will be substantially ignored, or shunted off to newsgroups that are not widely read.

Please respect the "Followup-To: poster" line and direct all feedback via E-mail to the Reply-To: address of rec-radio-info-request@panix.com.

Consistent with their newsgroup charters, followup discussion posts on this subject made to rec.radio.amateur.moderated or rec.radio.info will be rejected.

Thanks in advance for any thoughtful feedback on this subject. Such feedback will weigh strongly on our decision how to proceed in the future.

--
The rec.radio.info Moderation Team
rec-radio-info-request@panix.com

16. Moonbounce: HAARP / 40M

Newsgroup: rec.radio.amateur.moderated
Date: 2008-01-22 06:21:45 UTC

Message-ID: <HKdlj.41158$Pv2.16717@newssvr23.news.prodigy.net>
Source record: 3387

So I listened for the moonbounce echoes on 6792.5 kHz this weekend.

With a Kenwood R-2000 and a random wire, with a significant (s3-s5)
local
noise level, I was able (barely) to hear the reflected signals.

There was much fading. I note this in others reports as well.

I understand the mechanism (I think...) for fading with normal sky-wave.
How is the QSB explained on a direct signal from/to the moon?

Does the effective path length through the upper atmosphere actually
vary
by as much as 1/2 wavelength? When moving directly up through the
atmosphere?

What's the story?

Regards

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet |
newsgroups is the RadioBanter site: |

http://www.radiobanter.com |

sponsored by the NewsgroupBanter project: |

http://www.newsgroupbanter.com |

It, too, supports both reading and posting. |

-- Will the material appearing in rec.radio.info be archived somewhere? |

Yes. See Google Groups and RadioBanter above. |

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

For that matter so are plain old 9volt transistor
batteries. Since both terminals are at one end there is some
danger of their shorting if you carry a battery in your
pocked with change or keys and no protection over the
terminals. I don't think a 9V alkaline battery would explode
but they get hot enough to hurt you.

Hot enough to hurt is a few orders of magnitude below the danger posed by
lithium batteries. Lithium batteries burn with an extraordinarily hot fire
which cannot be extinguished by normal fire extinguishers. In addition, the
combustion products are highly toxic.

..

Lithium ion batteries are a lot safer than the original lithium batteries.

The problem of exploding batteries is one that we have inadvertently
brought upon ourselves. A good example is laptops, as we clamor for ever
smaller laptops, (Darn, that new Apple "Air is cool) and batteries that
last longer and longer, the manufacturers are kind of forced to go to
higher and higher energy densities to pack power into less and less volume.

As energy density increases, so does the excitement of any related failure.

And yet I think that the typical customer thinks that since it is
smaller, it must use less power. Kind of like how a lot of people think
that since highway driving nets better gas milage than in-town, that
traveling 80 miles per hour must give you better gas milage than
traveling 55. Logic, but bad logic nonetheless.

The battery rules are actually very good ones. See below.

I don't think a 9V alkaline battery would explode
> but they get hot enough to hurt you.

I have felt that warm and fuzzy feeling from carrying a 9 volt battery
in my pocket with some loose change. You can bet I don't do that any more.

Along similar lines, a few years ago, I bought one of the early lithium
(not LI ion) batteries in 9 volt form. There is a battery that should
never have been made!

his.

Maybe I'm lucky but I've never had overheat problems with any of my
Li-Ion batteries.

When in doubt, check the FCC/WTB site. No guarantee of accuracy or
even of being there.

And don't forget that "safer" doesn't mean they are safe. Loose batteries are just not acceptable among polite company! Or anywhere else for that matter. I supposedly know about these things, and yet I once put that 9 volt battery in my pocket.

For all the grief screeners take, this is a good ruling. It should have been around a long time ago.

I'm sorry - I did find out that it's no longer available on the public
ULS lookup site but the WTB does keep those statistics. You may want
to call the FCC/ULS Customer Support Hotline - 1-877-480-3201 - and
ask. them.

If you want information about a specific license, it is available for
public lookup on the ULS.

Hello all -

I am looking for a replacement fiber optic cable that was used in the ICOM IC-901A/E multi-band radio system.

The ICOM Fiber Optic Cable part numbers that will work are: OPC-172, OPC-172A or OPC-189.

I have looked at the manufacturer's site and talked to their support staff, they are no longer stocking or supporting these parts. I have also looked on e-Bay and several other sites without success

If someone knows where I might find any of these part numbers, either new or used, I'd be grateful.

Thanks for any help.

Message-ID: <fp226t$1hje$1@f04n12.cac.psu.edu>
Source record: 3251

Has anyone tried out CW Skimmer?

This looks like a product that could really change the way contesting and DX is done.

http://www.dxatlas.com/CwSkimmer/

This software can be used with a wideband SDR radio such as one of the "SoftRock kits to read a band. It can also be used with your own radio if you care to do a little surgery.

It will "read" the CW signals on a band, and sift through them to find the call signs, and display the same.

It probably will not appeal at all to the purists out there, but at least for myself, I find it an intriguing bit of software.

URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

I have to admit that I checked the calendar to be sure it wasn't April after reading about this.

I did a little searching on the web and found the same sales pitch repeated several times. I did find an article by Pete Smith N4ZR at http://www.pvrc.org/~n4zr/Articles/Skimmer.pdf that had some real-world data.

My question, based on limited experience with the ability of computers to copy CW in less-than-ideal conditions, is how many of the signals on a crowded contest band it would actually be able to successfully decode. Maybe this technology has made great leaps forward since I last tried to use it, but I just can't see it being effective enough to dig the signals out of the QRM and parse out the callsign.

I didn't find any actual use in a contest, so such real-world experience would be most interesting.

Hi Steve,

I've been experimenting with some of the CW reading and sending
software. due to my hearing issues. Background is that I have profound
tinnitus, don't hear much of anything over 2KHz, and weirdly enough, my
brain processes all sounds with equal weight. Noise is given equal
importance to what I actually want to listen to. So I can work CW if
condx are perfect, but most of the time I don't do very well.

Enough of my whining...

There is a new engine out there, of which I think Skimmer is using. I
have another program called MRP (something)that looks very similar. It
works very well indeed. It has that visual dot/dash display on a
horizontal waterfall, (also a big help) and the interesting thing is
that it seems to be doing something where it "looks behind" and will
sometimes correct itself as it goes along. I think that the software is
operating more akin to how humans decipher Morse.

Well, I'm not going to re-interpret how the
human brain works, but I think the operative
phrase is "adaptive re-programming" (more or
less). Some of that "adaptive" stuff has
been operating in sonar electronics for over
two decades. Sonar apparently used the first
"waterfall" displays to interpret sounds
under water...in order to separate 'fish
from foul' (so to speak) of all those low
frequency sounds.

I look at this new product as a very nice
peripheral to interpret on-off keying for
those of us who don't really care to bother
with audible on-off keying communications.
Since my human brain is highly adaptive to
visual input, I think of it as a good
adjunct to 'see' what PARTS of the [HF]
ham bands are doing. Also, radio contesting
has no personal interest to me so my
interest would only be in 'reading the mail'
to find out what is going on in the low
ends of the HF ham bands.

I have a fondness for electronics aids to
human senses and appreciate my Icom 746's
audio filtering. The old BFO in superhets
might be the very first 'aid' to hearing
on-off keying signals...compared to the
hiss and noise from old crystal sets!

The 746Pro also includes a little 5-level ('Baudot') teleprinter reader, apparently included as an afterthought in Icom's control system. A single line tiny display, it isn't much, but their internal control micros probably had enough program code space to include it. Too bad (for me) that Icom didn't also add the 8-bit ASCII TTY decoder. :-)

Personally, I LIKE to see these new aids to anything. About 35 years ago I got to use the equivalent of VNAs for RF measurement (HP Network Analyzer using an ancient HP 16-bit minicomputer) at work and thought it a FANTASTIC improvement over the grunge-work manual measurement on RF. Now I can get (if I want) reasonably-low-priced VNAs (with precise frequency control) from two amateur radio companies and Antenna Analyzers (with internal VNA) from at least six others. Antenna Analyzers beat the heck out of using a Noise Bridge and a scientific calculator to interpret the Bridge reads into meaningful complex quantities. :-)

at the risk of an OT digression who does this work, that is do you
have an opion on how well the machine does as this sounds neat to me

W4LT tested it last night on 40 meters. After the contest is over I'll see if I can find & excerpt his post. He seemed fairly impressed.

I wonder to what degree the improvement in Morse sending has made this kind of project more effective? The quality of transmitted Morse (in terms of spacing & element lengths being correct - and in terms of fewer errors) has improved considerably since I got my license in 1973.

Certainly the ascendancy of keyers has helped, but even then, older
software had some issues with noise, signal level, and adjacent signals.

I'm a real dilletente on the subject, but I think that the older
versions of CW decoding software relied heavily on timing to try to
emulate the human brain's decoding of Morse. Trouble is, I don't think
our brains work that way, because humans can decode some Morse that is
sent pretty badly.

But the old software could have big problems when the sender didn't use
the proper space timing, or when the dashes or dots were significantly
long or short. The human just adapted in real time.

I think that is what the new software is starting to tackle.

Available softwares for such time-related, adaptive programming have
been aided by technology such as flash memory and larger memories
in microprocessors (as stand-alone decoders). Adaptive programming
has been known in computer programming for at least 50 years but
hasn't had a resurgence until about a decade ago. The main thing
about its 'non-use' for morse code is that there really isn't a big
market for it outside of amateur radio.

Elsewhere there is the speech decoder used with a very few telephone
menu robots that can recognize numbers and certain letters or words.
A bundle with my WordPerfect 8 upgrade word processor (slightly over
8 years old now) was 'Dragon Naturally Speaking' which would process
word sounds and convert them to text. 'Naturally Speaking' would
'learn' the sound patterns associated with a particular voice
(repetition
required to have the adaptive programming do the 'learning'), then go
to a look-up table in memory and do the conversion into speech.
Outside
of trying out, I found that my faster typing skills (learned over six
decades)
would serve me better...the little free microphone was useful for
other

things...:-)

Adaptive programming is found in some higher-level visual graphics processors used in motion picture and television production around this corner of the USA. Those allow 'in-between' frame merging of movements similar to what was done in cartoon animation in the early 1930s. [lower-rank animators were assigned the tasks of making the 'in-between' drawings of major animator's drawings for the final inking and painting, hence the name 'in-betweeners'] There has been a MAJOR field of work in motion graphics software in the last couple of decades, but that is a niche activity, although a much more profitable one.

The little credit-card-sized MFJ 'morse reader' is more of a toy since it has rather simplistic adaptive programming ('learning' involved only in setting the approximate rate of words sensed) but is somewhat successful in that. More advanced adaptive programming would require more memory and processing of relative space-dot-dash sensing on-the-fly to determine the 'bad fists' of certain morse senders. As of the end of 2007, Microchip has brought out several newer microcontroller models with much more memory and faster operating clock speeds for those wanting to experiment with useful adaptations.

It is less of a 'softwares' comparison of 'old' v. 'new' but rather an intellectual experimentation project of applying adapative programming methods to such 'learned human' activities. It is probably NOT 'the way the brain works' (nobody is really certain of that anyway) but that is irrelevant in the task of determining the time-related sound patterns of on-off keying beeps and translating that back to some form of text that anyone (who knows the western alphabet) can read. It is an eminently POSSIBLE thing to do and I'm glad that some are willing to tackle the task.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

==> KOSOVO AND DXCC

Kosovo declared its independence from Serbia on February 17, setting off
new speculations on what this means to Amateur Radio and specifically,
to the DXCC program. ARRL DXCC Manager Bill Moore, NC1L, said he
understands that there are many questions about the DXCC status of
Kosovo, especially concerning whether or not the new state will be added
to the DXCC list.

Moore said the DXCC rules, modified in 2000 to better handle inclusion
to DXCC, are clear on how additions can be made: "For inclusion in the
```

DXCC List, certain conditions must be met. Gaining entry on the DXCC List is not contingent upon whether operation has occurred or will occur, but only upon the qualifications of the Entity."

According to Moore, adding Kosovo to the DXCC List would be considered under the "Political Entity" DXCC guidelines. The DXCC rules state that "Political Entities are those areas which are separated by reason of government or political division. They generally contain an indigenous population which is not predominantly composed of military or scientific personnel."

Kosovo, according to the DXCC rules, would then be added to the DXCC List as a Political Entity if it meets one or more of the following criteria:

* The entity is a UN Member State.

* The entity has been assigned a call sign prefix block by the ITU. (The exceptions to this rule are international organizations, such as the UN and ICAO. These Entities are classified under Special Areas, 3.a; and Ineligible Areas, 4.b.) A provisional prefix bloc assignment may be made by the Secretary General of ITU. Should such provisional assignments not be ratified later by the full ITU, the Entity will be removed from the DXCC List.

* The Entity contains a permanent population, is administered by a local government and is located at least 800 km from its parent. To satisfy the "permanent population" and "administered by a local government" criteria of this sub-section, an Entity must be listed on either (a) the US Department of State's list of "Dependencies and Areas of Special Sovereignty" as having a local "Administrative Center," or (b) the United Nations list of "Non-Self-Governing Territories."

"New Entities satisfying one or more of the conditions above will be added to the DXCC List by administrative action as of their 'Event Date.' Kosovo will be added to the DXCC list if it becomes a member of the UN, or if it receives a prefix bloc from the ITU. The third condition does not apply," Moore said. "The 'Event Date' will be either the date Kosovo became a UN member or it receives its prefix from the ITU. Contacts made before the Event Date will be counted as Serbia."

==> HOMEBREW CHALLENGE WINNERS ANNOUNCED

The Homebrew Challenge (HBC) <http://www.arrl.org/qst/hbc/> was announced in the August 2006 issue of QST and on the ARRL Web site. Entrants were encouraged to submit a home-constructed voice and CW, 5 W minimum output radio by August 1, 2007. The radio had to be reproducible from no more than $50 of new parts.

In October of 2006, by popular demand, HBC organizers at ARRL offered a second category to the competition that allowed a PC to be used as part of the control, display or processing function; it could also be used to program a microprocessor.

QST Technical Editor Joel R. Hallas, W1ZR, found four entries that passed the documentation and price confirmation check. These entries also went through an ARRL Laboratory evaluation to make sure that they met all the ARRL and FCC technical requirements before being subjected to a thorough operational evaluation by ARRL staffers.

The judges announced two winners in the HBC, one in each category. The PC-supported winner was Jim Veatch, WA2EUJ, who gathered the most points in the evaluation by our judges; an article describing his radio will appear in the May 2008 issue of QST. In a way, Hallas said, Veatch's radio could be considered a contender for the other award as well, since he has agreed to provide his firmware onto builders' processors at no cost if they don't have programming capabilities.

The winner with a radio totally without use of a PC is Steve Weber, KD1JV, who came in close behind in overall scoring by the judges. His radio will be described in a subsequent QST article.

In addition to these winners, entries were received from Dave Cripe, NM0S, and Doug Pongrance, N3ZI. Hallas said the judging panel enjoyed exploring and operating each radio; each radio had its strong points and unique features, making selection difficult. The judges spent many hours operating, comparing and scoring the radios based on their technical proficiency, as well as operating features and reports from distant stations.

Hallas thanked the judges for contributing their time to this effort: W1AW Station Manager Joe Carcia, NJ1Q; ARRL Lab Manager Ed Hare, W1RFI; Contest Branch Manager Sean Kutzko, KX9X, and QEX Editor Larry Wolfgang, WR1B. Hallas also served as a judge. Almost all the judges have considerable experience operating low power (QRP) radios in contests and other venues. Hare has served as a judge for various QRP equipment contests sponsored by the QRP Amateur Radio Club International (QRPARCI) and noted these entries stood well in comparison to many he has judged previously.

Hallas also thanked ARRL Lab Engineer Michael Tracy, KC1SX, for fitting in HBC testing between product review evaluations and his other responsibilities, as well as for helping set up the operational evaluation suite in the newly renovated W1HQ/W1INF Headquarters Operators Club shack.

==> NEW ARRL SECTION MANAGERS IN SAN DIEGO, LOUISIANA AND VIRGINIA

In the only contested Section Manager race this winter, Steve Early, AD6VI, was elected ARRL San Diego Section Manager with 332 votes; his opponent, Pat Bunsold, WA6MHZ, received 264 votes. Election ballots were counted February 19 at ARRL Headquarters.

Early, whose two-year term begins on April 1, 2008, said that he is looking forward to the opportunity to serve. He has been active in several Amateur Radio clubs and ARES, as well as providing public service support to agencies such as the American Red Cross and CERT (Community Emergency Response Team); he is president of the Palomar

Amateur Radio Club (PARC). Early takes over from Harry Hodges, W6YOO, who was appointed to fill the vacant position in November 2007.

Louisiana will also be getting a new Section Manager on April 1. Gary Stratton, K5GLS, of Shreveport, the Louisiana Section Emergency Coordinator for the last three years, will be taking the reins from Mickey Cox, K5MC. Cox, who has served as Section Manager for the past eight years, decided not to run for another term of office.

Carl Clements, W4CAC, of Portsmouth, Virginia, returns to the Virginia Section Manager's post on April 1. He previously served as Virginia Section Manager from May 2001-March 2006. Glen Sage, W4GHS, the outgoing Virginia Section Manager, did not seek a new term of office.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning April 1, 2008: Pete Cecere, N2YJZ, Eastern New York; Eric Olena, WB3FPL, Eastern Pennsylvania; Tim Slay, N4IB, North Carolina; Richard Beebe, N0PV, South Dakota, and Bob Schneider, AH6J, Pacific.

==> WHAT'S COMING UP IN THE MARCH/APRIL ISSUE OF QEX

The March/April issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, Milt Cram, W8NUE, and George Heron, N2APB, describe the design and construction details of their "NUE-PSK Digital Modem." The authors provide complete technical details as a companion to their March QST article. Cornell Drentea, KW7CD, presents some schematic diagrams and circuit descriptions for his "Star-10 Transceiver," in Part 2 of this series.

Jack Smith, K8ZOA, provides an interesting look at carbon composition resistor aging as well as inductive and capacitive effects of other resistor construction types in "Carbon Composition, Carbon Film and Metal Oxide Film Resistors." Contributing Editor L. B. Cebik, W4RNL, looks at several impedance matching options for modern HF and VHF beam antennas in "Antenna Options."

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Author's Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> NAME THE W1HQ MASCOT

W1HQ, the Laird Campbell Memorial HQ Operators Club, has a mascot in need of a name. Membership Manager Katie Breen, W1KRB, purchased the six-foot long stuffed yellow-green toy snake as a way to make the refurbished station a bit friendlier.

Breen said, "In addition to the physical upgrades to W1HQ, we realized that it is our club -- therefore it should be fun too! It just seemed so natural to have a mascot for our club station. The snake comes in handy when stressed out trying to get that DX that is just out of reach! With all the serious sides of ham radio, it's important to remember that it is fun -- and not to take ourselves too seriously sometimes!"

Breen and the rest of the W1HQ team are calling on the Amateur Radio community to help give the as-yet unnamed snake a name: "We encourage all amateurs to submit a name for the snake. We will get together and go over all the entries to choose the best one and announce the winner at our W1HQ special event around the first of April."

"I will be blogging again and posting YouTube videos of the event," Breen said. "We'll announce the winner over the air, on the blog and in video, too." She previously blogged the Hello-Live! event and the W1AW HF Open House.

The contributor of the winning entry will receive their choice of a current edition of "The ARRL Operating Manual," "The ARRL Handbook for Radio Communications" or "The ARRL Antenna Book." All entries should be family-friendly (G-rated) and sent via e-mail <w1hqsnake@arrl.org>.

==> KANSAS HAMS WORKING TO GET ANTENNA BILL PASSED

After an unsuccessful attempt eight years ago to get a PRB-1 type bill signed in Kansas, radio amateurs in that state are trying once again. A hearing for HB 2805 <http://www.kslegislature.org/bills/2008/2805.pdf> in front of the Kansas House Elections and Governmental Organization Committee is scheduled for Monday, February 25. The bill, "An Act Concerning Telecommunications; Establishing The Kansas Emergency Communications Preservation Act," was written by Rep Arlen Siegfreid (R-15).

JD Spradling, KC0NYS, of Olathe, Kansas, is chairman of the committee <http://www.hamsforkansas.org/> leading the charge to get a PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1.html> law on the books in that state. He commented: "Many local zoning boards don't give FCC regulations adequate consideration when making zoning decisions and across the country amateurs have found that state laws are a more effective tool for influencing local zoning regulations. So beginning in the 1990s, amateurs began lobbying for legislation that would place PRB-1-type language into their state laws."

The bill states that if a municipality takes any action that regulates the placement, screening, number or height of a station antenna structure, the action must "Reasonably accommodate federally licensed amateur radio service communications; and constitute the minimum regulation practicable to carry out the legitimate purpose of the

governing body." Antenna support structures that were constructed prior to the bill's effective date (if passed) "are exempted from subsequent changes in zoning regulations...and may be repaired as required."

Spradling said the bill was introduced on February 11 and referred to committee the next day. The Committee will hear the bill on Monday, February 25 in Room 784 in the Docking Building in Topeka at 3:30. If hams plan on testifying Monday, please e-mail <c3smaxi@mokancomm.net> Spradling the written testimony so he can prepare a final list to give to the Committee Chairman Secretary. "If you cannot be present on Monday, you can always send written testimony and I will make sure it becomes part of the written record," Spradling said.

==>SOLAR UPDATE

Tad "Tipt round with silver from the Sun's bright eyes" Cook, K7RA, this week reports: No sunspots yet, and the sun has been blank for 17 days. For a week, one sunspot was visible prior to the spotless period, and that followed a 20-day spotless run. NOAA and the US Air Force have predicted daily solar flux (the amount of energy we receive from the Sun at a wavelength of 10.7 cm or 2800 MHz) right at 70 recently, but bumps that to 72 for March 1, continuing into April. This is a minor change, but perhaps this signals that forecasters don't expect any more spots during February. NOAA also predicts low geomagnetic activity until February 28-29 with the planetary A index at 5 through February 26, then 8, 20, 15 and 12 through March 1. Geophysical Institute Prague predicts quiet conditions February 22-26, quiet to unsettled February 27 and unsettled February 28. Sunspot numbers for February 14-20 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 70.6, 69.7, 70.3, 71.1, 71.2, 71.7 and 70.9 with a mean of 70.8. Estimated planetary A indices were 15, 10, 9, 5, 12, 12 and 7 with a mean of 10. Estimated mid-latitude A indices were 10, 8, 8, 3, 9, 10 and 5 with a mean of 7.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is on February 22. The Russian PSK WW Contest is February 22-23. Look for the CQ 160 Meter Contest (SSB), the REF Contest (SSB), the UBA DX Contest (CW), the Mississippi QSO Party and the North American QSO Party (RTTY) on February 23-24. The High Speed Club CW Contest is February 24. The North Carolina QSO Party is February 24-25 and the SKCC Sprint is February 27. Next weekend is the ARRL International DX Contest (Phone) on March 1-2. The NCCC Sprint is February 29 and the Wake-Up! QRP Sprint is March 1. Thelow band portion of the Open Ukraine RTTY Championship; the high band portion is March 2. The DARC 10 Meter Digital Contest is

March 2 and the RSGB 80 Meter Club Championship (Data) is March 3. The ARS Spartan Sprint and another running of the NCCC Sprint are March 4. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March, 9, 2008, for these online course sessions beginning on Friday, March, 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* 2008 Field Day Web Page Good to Go: The official 2008 ARRL Field Day Web page <http:// www.arrl.org/FieldDay> is up and running. The page includes a summary of available resources, with links to Field Day forms and rules, logos and reference links. There is also a link for ordering commemorative Field Day T-shirts, pins and other supplies. ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, said supplies will begin shipping in early March, but it's not too early to place a pre-order now. Radio clubs are encouraged to order early.

* ARRL Handbook a "Must-Have" for Broadcast Industry: A broadcast industry trade publication has named "The ARRL Handbook for Radio Communications" as the top-rated reference book of broadcast engineers. In an article <http://radioworld.com/pages/s.0047/t.11230.html> in the February 13 edition of "Radio World," the various annual versions of the "Handbook" received the most mentions of necessary literature on the engineer's desk. Doug Fearn, K3KW, an independent handcrafter of audio equipment and a former chief engineer, said, "Not only did I learn electronics from that book, but the old editions are superb examples of how to explain things clearly." Andy Butler, senior director for systems engineering at PBS and a former president of the Society of Broadcast Engineers (SBE), also recommended the "Handbook," calling it "The best, most comprehensive, cheapest guide to technology you will ever need."

* From the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 3Y0E DXpedition to Bouvet Island from December 2007-February 2008 has been approved for DXCC credit.

* W1AW Endowment Campaign to Start in March: The W1AW Endowment campaign is ready to launch next month. Contributions to help preserve and maintain W1AW, the Hiram Percy Maxim Memorial Station <http://www.arrl.org/w1aw.html> will help ARRL continue the work to upgrade the Amateur Radio equipment that sends the daily bulletins and code practice sessions, as well as equipment in the visitor operating suites. All new antennas have been installed and filters added in 2007. With more new transceivers and amplifiers, W1AW will continue to live up to its role as the flagship Amateur Radio station. Contributions can be made by mail, telephone (860-594-0397) or online <http://www.arrl.org/endoww1aw>.

* Rod Dinkins, AC6V (SK): Rod Dinkins, AC6V, of Oceanside, California, passed away Saturday, February 16. An ARRL member, he was 77. Many hams considered Dinkins, the author and developer of the Web site www.ac6v.com, <http://www.ac6v.com> to be the final word on anything to do with ham radio. His Web site has more than 130 pages covering thousands of Amateur Radio-related topics, everything from amps (A) to impedance (Z); some hams have said that if a topic is not found on or linked to Dinkins' Web site, it's safe to say that topic does not exist in the Amateur Radio world. Dinkins was also the author of a number of ham radio books, including "FM101x: Using FM Repeaters" and "DX101x: HF + 6 Meters DXing." Dinkins started in radio in the late 1940s with his Knight Kit Ocean Hopper receiver, listening in to the ham bands. In 1977, he received his Amateur Radio license with call sign WA6WTO. He served as an Aviation Electronics Technician from 1951-1955. Re-entering civilian life, Dinkins spent four years as an electronics instructor, followed by two years as a vocational electronics teacher at a junior college. For more than 30 years, Dinkins worked in the aerospace industry as an electronics technical writer. He was a member of the San Diego DX Club (SDDXC) and the Palomar Amateur Radio Club (PARC), and was the former newsletter editor of the Northern California DX Club (NCDXC). Son Jeff has hosted his father's Web site for the past five years and has plans to keep it up and running; Jeff plans on getting his Amateur Radio license and applying for his father's call sign. Dinkins is survived by his wife Karla, sons Jeff and Steve and two grandchildren, Rory and Ewan. Jeff Dinkins told the ARRL that a funeral with full military honors will take place March 13 at Fort Rosecrans National Cemetery in San Diego.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL -- the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site

<http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline" Report 1593 - February 22, 2008

Amateur Radio Newsline report number 1593 with a release date of Friday, February 22nd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The SouthEastern Repeater Association announces the beginning of digital voice repeater coordination, hams answer the call as floods hit Hawaii and the next Global Amateur Radio Emergency Communications Conference will take place this spring in Germany. Find out the details on Amateur Radio Newsline" report number 1593 coming your way right now.

(Billboard Cart Here)

REPEATER COORDINATION: SERA ANNOUNCES DIGITAL VOICE BANDPLANS

Someone had to take the lead in coordinating digital voice repeaters and the SouthEastern Repeater Association has. While not the first digital voice repeater plan, it represents the largest geographic area and likely will have an impact on neighboring states and those states neighbors. Amateur Radio Newsline's Don Carlson, KQ6FM has the details:

--

Acting on a motion presented by Mississippi Director Steve Grantham, AA5SG, the giant SouthEastern Repeater Association has adopted provisions to allow for the introduction of digital voice technology systems. This includes such entities as P 25 and D-Star repeaters.

To make this happen association President Roger Gregory, W4RWG, appointed a working committee to implement the needed changes on the groups web site. While the web presentation is described as a work-in-progress there are already links to the newly posted 144 to 148 MHz and 420 to 450 MHz Frequency Utilization Plans.

And it appears as if the SouthEastern Repeater Association has taken the positron that the introduction of digital voice technology must have minimal impact on all existing analog operations in both the repeater and non repeater portions of any band. A quick glance shows that on both bands the coordinating body has chosen to keep most, though not all, digital voice operation within current repeater subbands. It uses interleaving between existing F-M repeaters to accomplish this.

But the committee has a lot more work ahead of it to make this all happen smoothly. This includes modifying any association documents or forms

requiring change. Its also tasked with assisting district coordinators in matters pertaining to the introduction of such digital repeaters. The committee will also continue to study and bring forth new information as needed to facilitate ongoing effective digital repeater coordination efforts.

Whether or not the SouthEastern Repeater Association plan will be adopted nationally is not known, but it opens the door to a coordinated effort to introduce digital voice repeaters while protecting all other spectrum users. And that's definitely a step in the right direction.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM

--

For those not aware, the SouthEastern Repeater Association is the nations largest repeater band-planning body. It provides voluntary frequency coordination for Amateur Radio repeaters in Georgia, South Carolina, North Carolina, Virginia, West Virginia, Kentucky, Tennessee, and Mississippi. The action on digital voice repeaters came at the organization's winter board meeting on January 5th. You can see its new 2 meter and 70 centimeter bandplans on line at:

OVERVIEW OF SERA PLAN:
http://www.sera.org/D-Star%20Position%20Statement%20-%203.htm

SERA 144-148 MHz Frequency Utilization Plan: http://www.sera.org/2.html

SERA 420-450 MHz Frequency Utilization Plan: http://www.sera.org/440.html

(From SERA release)

**

REPEATER COORDINATION: UTAH VHFS ON DIGITAL REPEATER CHANNEL SPACING

Still with digital voice repeaters, word that the Utah VHF Society has produced what observers are calling a very useful article on channel spacing for D-Star digital relay devices. Titled "Analysis and recommendations of channel spacing for D-Star operations on the VHF and UHF amateur bands" the article addresses the issues of co-channel D-Star interference. It also covers adjacent channel interference issues between D-Star and existing analog FM systems.

The article is well worth the time to read. You will find it on line at www. utahvhfs.org/dstar_channel_spacing/html (From Utah VHFS release)

**

RESCUE RADIO: HAMS RESPOND TO THE FLOODS IN HAWAII

Hams in Hawaii were quick to respond in early February when heavy rain caused flooding in many parts of the state. According to ARRL Pacific Section Manager Bob Schneider, AH6J, Skywarn and several nets were activated. Information came in from several areas including Hawaii County Civil Defense.

IRLP and Echolink were used in conjunction with VHF and HF radio to keep the information flowing. Harvey Motomura, AH6JA, also sent several test messages from Hawaii County C-D by Winlink. This, to prove that e-mail is still possible even if wire and cable connections are lost.

Even though hurricane season in Hawaii officially ended last November 30th, continued weather problems remind hams in the Island State that they are never completely out of danger. (From Hawaii SM Report)

**

RESCUE RADIO: GAREC-08 AT FREDRICHSHAFEN HAM SHOW

The fourth Global Amateur Radio Emergency Communications Conference, GAREC-2008, will take place on June 26th and 27th. This, in conjunction with the 2008 Ham Radio convention in Friedrichshafen, Germany.

The event will be organized by the IARU Region 1 Emergency Coordinator, Seppo Sisatto, OH1VR with the team that already put together the previous conferences in Tampere, Finland, in 2005 and 2006. Global Amateur Radio Emergency Communications Conference 08 will focus on the cooperation among IARU member societies with specialized groups working on emergency communications in the Amateur Radio Service.

General information on subjects such as travel and accommodation is available at http://www.hamradio-friedrichshafen....l/en/index.php and details of program. The URL for on-line registration will be announced on the IARU pages at http://www.iaru.org/emergency/ in a few weeks. (HB9AQS)

**

RESCUE RADIO: THE UN AND INDUSTRY COMBINE IN RESPONSE EMCOMMS

But hams are not the only ones looking at the future of first response emergency communications. A new United Nations program to train communications experts to respond faster in dangerous and hostile environments got a boost at the recent World Mobile Congress in Spain. This with word that the Vodafone Group Foundation has pledged $6.3 million for the effort. Bruce Tennant, K6PZW, has more:

--

According to the news release, training and deployment in time of crisis will be handled through Vodafone's technology partnership with the private United Nations Foundation. The U.N.'s World Food Program is designated as the lead communications agency in international crises. This, by nature of its longtime first-responder role.

By way of example of what these and other fly-away operations can do, when a suicide bomber struck a U.N. office in Algeria last December it not only killed 17 U.N. employees. The bomb also took out the agency communications infrastructure necessary for it to respond to the tragedy. Two communications experts were dispatched from Dubai with satellite telephones and a radio transmitting gear. They were up and running less than 24 hours after the attacks providing emergency communications support needed in the

aftermath of this terrorist attack.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Obviously there is a lot of interest growing in split second emergency communications response, world wide. (Vodafone)

**

WORLDBEAT - RWANDA: EA5RM VS DJ9ZB OVER RWANDA

A big rift in D-X circles over a team of German operators beating out a Spanish operator to be the first to activate Rwanda. Antonio Gonzalez, EA5RM, who now also holds the call sign 9X0R says in a statement posted to his website that DJ6SI, DK2WV and DJ9ZB used political lines of communications that he developed to slip in and operate from that rare one before his DXpedition could arrive.

EA5RM claims that he was the one who traveled to Rwanda and secured permission for hams to once again take to the airwaves. He says that as a courtesy that he informed the German DX Foundation of his plans. He also requested that the Federation supply a member to his team

Gonzalez says that instead German DX'ers DJ6SI, DK2WV and DJ9ZB got their own Rwandan licenses and quickly mounted the 9-X-Zero operation that was on the air through February 21st. EA5RM says that because of this that he is returning the German DX Foundation funds donated to his upcoming 9X0R operation because he and his operators believe that the actions of its President, Franz Langner, DJ9ZB, are not the proper ones to promote amateur radio and DX. Gonzalez also asks everyone who took part in the German lead operation to and remember which kind of hams you were trying to contact.

No response to EA5RM's charges from DJ9ZB or his team They have been to busy running the pileups that they have been crating on the air from Rwanda. (EA5RM from various DX news sources)

PUBLIC SERVICE: VOLUNTEERS NEEDED FOW WINTER OLYMPICS IN 2010

The 2010 Winter Olympics is seeking amateur radio volunteers. This with the announcement that the Vancouver Olympics Committee has given Radio Amateurs of Canada details of their search for ham radio volunteers to

assist during the 2010 Olympic Winter Games and Paralympic Winter Games.

Of the 25,000 volunteers required, Amateur Radio operators are especially needed to help in technical roles during the events, and perhaps earlier. Volunteers must have their own local accommodation in Greater Vancouver or Whistler areas.

The on-line volunteer application form at www dot vancouver2010 dot com includes space to list skills and experience. If the applicant wishes a communications or technical role, the or she should add a key phrase on their application form to make it easy for planners to identify them. And on the fifth application page, add the words "Amateur Radio Operator" in a box called "Additional Information."

Again, if you want to volunteer to provide communications support for the 2010 Olympic Winter Games and Paralympic Winter Games go to www dot vancouver2010 dot com and fill out the form. (Radio Amateurs of Canada)

**

ENFORCEMENT: FCC TELLS TEXAS HAM TO STAY OFF TWO REPEATERS

The FCC has told a Texas ham that he must obey the orders of repeater trustees who want him to keep off of their repeaters. In a January 29th Warning Notice to Travis L. Maltese, AD5CT, of Edna the FCC states that he trustees of the W5DSC and K5SOI repeaters have requested in writing that Maltese refrain from use of the repeaters.

The FCC say that the letters were issued as a result of Maltese alleged failure to follow operational rules set forth by the licensee/control operators of the repeater systems for their users. As such, the regulatory agency says that Maltese will be expected to abide by the requests to stay off the W5DSC and K5SOI systems and any other such requests by repeater licensees, control operators or trustees.

The FCC notice also warns Maltese that should he use these repeaters again after receipt of its letter, that the agency will initiate enforcement action against his license. This could include revocation, monetary forfeiture of his license or a modification proceeding to restrict the frequencies on which AD5CT may operate. Fines normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: FLORIDA MAN TOLD TO STAY OFF HAM BANDS

And the FCC has warned a Florida non-amateur to stay off the ham bands. In its January 29th letter to Joseph Goldberg of Tavernier, the regulatory agency warns him that he could face a fine of up to $10,000 if he's again caught operating without a license. The FCC gave no other details but did add that this is the last warning that Goldberg will receive. (FCC)

**

RADIO LAW: COMCAST UNDER FCC SCRUTINY OVER INTERNET DELAYS
The FCC is looking into complaints that a telecommunications giant is tinkering with communications over the Internet. Jim Davis, W2JKD, is here with the details:
--
FCC Chairman Kevin Martin says that the FCC will investigate complaints that Comcast Corporation actively interferes with Internet traffic as its subscribers try to share files online. January 8th release says that a coalition of consumer groups and legal scholars asked the agency in November 2007 to stop Comcast from discriminating against certain types of data. The two groups also asked the FCC to fine the nation's No. 2 Internet provider $195,000 for every affected subscriber.
Comcast denies that it blocks file sharing, but acknowledged that it was "delaying" some of the traffic between computers that share files. The company said intervention was necessary to improve the surfing experience for the majority of its subscribers.
The FCC's policy statement makes an exception for "reasonable traffic management." Comcast has said its practices fall under that exception.
I'm Jim Davis, W2JKD.

--
The government will be looking to see if Comcasts actions fit the permitted exception. (FCC)

**

RADIO REGULATIONS: THE FCC CHANGES BANKS

U.S. Bank has replaced the Mellon Bank as the incoming lockbox for all FCC programs except auction related payments. A lockbox bank serves as the filing and processing agent for a corporation or government entity. Fees and payments along with associated identifying information, are sent directly to the lockbox account. The address of U.S. Bank is 1005 Convention Plaza; SL-MO-C2-GL; St. Louis, MO 63101. (RW)

**

RADIO BUSINESS: MOTOROLA MAY OPT OUT OF THE CELLPHONE BUSINESS

Motorola says that it is considering separating its loss-making mobile phone unit. The world's third-largest mobile phone maker has been losing market share to market leader Nokia Corp and Samsung Electronics. It now says that is looking at a structural and strategic realignment to help it recapture market share and enhance shareholder value. Options include spinning off or selling the phone division, which accounts for about half of revenue.

Motorola is best known for its commercial two-way land mobile radio equipment. The company recently completed a deal to acquire control of Vertex Standard Corporation which manufactures its own line of two-way land mobile equipment and Yaesu brand Amateur Radio gear. It also manufacturers television set-top box and network equipment.

As already noted, potential suitors for it mobile telephone division are believed to include rivals such as Samsung Electronics, which took the number two ales position from Motorola in 2007, or number five ranked LG Electronics.

Contrary to the rumors being circulated by uninformed Internet bloggers and web rumor mongers, any sale of Motorola's mobile phone business is not expected to in any way impact on the manufacture and sales of Yaesu brand ham radio gear. (Published reports, ARNewsline")

**

NAMES IN THE NEWS: ARRL SECTION MANAGERS ELECTED

Some names in the news. The ARRL reports that in the only contested Section Manager race this winter, Steve Early, AD6VI, has been elected ARRL San Diego Section Manager. Early has been active in several Amateur Radio clubs and ARES, as well as providing public service support to agencies such as the American Red Cross and the Community Emergency Response Team.

Louisiana will also be getting a new Section Manager. Gary Stratton, K5GLS, of Shreveport, the Louisiana Section Emergency Coordinator for the last three years, will be taking the reins from Mickey Cox, K5MC. Cox, who has served as Section Manager for the past eight years, decided not to run for another term of office.

Carl Clements, W4CAC, of Portsmouth, Virginia, returns to the Virginia Section Manager's post. He had previously served in this position from May 2001 to March 2006. Glen Sage, W4GHS, the outgoing Virginia Section Manager, did not seek a new term of office.

All other incumbent ARRL Section Managers facing re-election faced no opposition and were declared winners. Ballots were counted at ARRL Headquarters on February 19th. All begin their new terms of office on April 1st. (ARRL)

**

THE SOCIAL SCENE: MT BEACON HAMFEST IN NY IN APRIL

Turning to the ham radio social scene, word that the 2008 Mt. Beacon Amateur Radio Club Hamfest takes place on Sunday April 1. The venue is Tymor Park in LaGrangeville, New York. More is on-line at www.wr2abb.org. (WA2BSS)

**

THE SOCIAL SCENE: IOTA DINNER IN CALIFORNIA IN APRIL

The 13th annual Islands On The Air or I-Oh-T-A Dinner will be held on Friday, April 25th, in the Birch Room of the Holiday Inn Hotel and Conference Center in Visalia, California. This, in conjunction with the 58th annual Visalia International DX Convention. In addition to dinner, G3ZAY will present a talk on the Islands On The Air program and how it functions. For additional information regarding this event, please

contact: Jim Zimmerman N6KZ, by e-mail to: jimzim1 at mindspring dot com

(OPDX)

**

THE SOCIAL: SCENE: TAPR IN CHICAGO IN SEPTEMBER

The Tucson Amateur Packet Radio Corporation has announced that the 2008 joint Digital Communications Conference with the ARRL will take place September 26th to the 28th. This, at the Holiday Inn Hotel in Elk Grove Village, Illinois, a suburb of Chicago, near O'Hare airport.

The conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications. Forums will feature the latest developments in Amateur Radio digital communications, as well as demonstrations of emerging digital technology.

More information is available on line at www.tapr.org/dcc.html (TAPR)

**

RADIO ENTERTAINMENT: THE BANK JOB AND HAM RADIO

And a new British movie titled The Bank Job features Amateur Radio. Due for release before months end, the film is a fictionalization of a daring, unsolved robbery, which took place in London more than 35 years ago. In the film, handhelds used by the criminals are intercepted by a ham radio operator who becomes involved in the attempt to catch them. An official website at www.bankjobmovie.co.uk gives 5 movie clips to view. But be aware. This film does carry an R rating. (Southgate)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: ROD DINKINS, AC6V, S.K.

Some truly sad news out of California's Palomar Amateur Radio Club. Word that Rod Dinkins, AC6V, the man behind the famed www dot ac6v dot com ham radio information website, has become a silent key.

Called the Google of ham radio by some, www dot ac6v dot com quickly became the place to go for information on anything amateur radio related. Its 132

pages contain 700 topics and 6000 links. If its not found on or linked to www dot ac6v dot com its safe to say it does not exist in ham radios world. Rod was also the author of a number of ham radio related books including the Amateur Radio DX Reference Guide and DX 101 for HF and 6 Meters. .

Rod Dinkins started in radio in the late 1940's as an SWL, AM, and ham band listener with a Knight Kit Ocean Hopper receiver but it was not until 1977 that he became a radio amateur with the call WA6WTO. But his career was all radio and electronics. He spent four years in the US Navy during the Korean War as an Aviation Electronics Technician. Re entering civilian life, Dinkins spent four years at Convair in Pomona, California as an instructor of electronics and guided missiles. This was followed by 2 years as a vocational electronics teacher at a Junior college level in Walnut California and over 30 years as an Electronics Technical Writer within the aerospace industry.

Rod Dinkins, AC6V, passed away on Saturday, February 16th at the Tri-City Hospital in the city of Oceanside. He is survived by his wife Karla. At airtime funeral arrangements were pending. (W6VR, others)

**

HAM RADIO IN SPACE SOUTH AFRICA'S SUMBANDILA SAT DELAYED

South Africa's Sumbandila Sat launch has been delayed indefinitely. The satellite, which includes an amateur radio payload, was to have been launched from a Russian submarine last year but arrangements went sour when the two defense authorities could not agree on a reciprocal satellite arrangement.

Word is that the South African Ministry of Foreign Affairs was recently in Russia this week as part of a technical and scientific cooperation mission. Its likely that an alternative launch was to have been discussed. Meantime there is no official comment on what may have transpired and Sumbandila Sat is still sitting in the clean room at the nations Sunspace launch assembly facility. (SA AMSAT)

**

HAM RADIO IN SPACE: HOUSTON SATELLIE NET CHANGES BIRDS

The Houston AMSAT Net has moved to the K-band the SkyScanner Satellite Radio Network on the Galaxy-25 geostationary satellite. The net was formerly retransmitted on the SBS-6 bird over the W0KIE Satellite Radio Network. No reasons was given for the change which took place on February 5th. (ANS)

**

WORLDBEAT - EUROPE: CZECH HAMS TO GET 4 METER BAND

The Czech Telecommunication Office has announced that nations radio amateurs will soon have access to the 4 meter band. The

telecommunications regulator plans to issue up to 20 special permits for 70.2 to 70.3 MHz with 10 Watts ERP. This is a band unique to parts of Europe but not available to radio amateurs in I-T-U Region 2. The Czech permits will be valid until 31 Dec 2008. (Southgate)

**

RADIOSPORTS: CQ UPDATES THE WPX AWARD PROGRAM

CQ magazine and W-P-X Awards Manager Steve Bolia, N8BJQ, have announced several changes to that program. Under the new rules, contacts on all bands between 160 and 6 meters will count for W-P-X award credit. In addition, new band endorsements will now be available for 5 MHz, 10 MHz, 18 MHz, 24 MHz and 50 MHz contacts.

And a separate digital W-P-X award has also been added. It covers contacts made on RTTY, PSK and other keyboard modes. 300 confirmed prefixes required for the basic level of the award. digital-mode contacts will also count toward the existing Mixed award, as will those prefixes worked on the newly added bands.

The changes are effective immediately. Details on these and other changes will be published in the March issue of CQ magazine. They are also posted along with the March issue highlights at www.cq-amateur-radio.com. (CQ)

**

DX

In D-X, the 3Y0E Bouvet Island Dxpedition went QRT at 19:15 U-T-C on February 9th. Any contacts made with any station claiming to be 3&0E after that time and date will be considered as fakes. All log issues will be double checked and all operators concerned will be informed of their log status at that time

G3SWH and G3RTE will be active from Georgetown, Guyana, through February 29th. The callsign is 8R1PW. As there have been two operations from Guyana in 2007 which used mainly SSB, their activity is CW only on 160 to 10 meters. WSL via the bureau.

And word that SM4XDJ is active as S21XJ from Dhaka, Bangladesh for a few weeks. He's reportedly operating SSB and digitalmodes during his evening hours and the weekends. QSL via SM4XIH.

And G3TBK will once again be active from Saint Vincent signing J88DR for the March 1st and 2nd ARRL DX Phone Contest and the following week. Activity will be on all HF bands using CW, SSB, RTTY and SSTV. QSL via G3TBK, direct or by the RSGB Bureau.

Look for 11 Lithuanian special event stations to be active with the prefix LY90 from February 16th through March 16th.. This, to celebrate the 90th anniversary of independence in the Lithuanian Republic. QSL as directed on the air.

Lastly, keep an ear open for G3RWF who is active from Uganda as 5X1NH through March 22nd. His operation will be limited because he is on holiday but he expects to operate all bands except 160m and 6 meters. Modes will be CW, SSB, RTTY and PSK at 100 watts to wire antennas. QSL to G3RWF.

From various DX news sources

**

THAT FINAL ITEM: NASA SENDS "ACROSS THE UNIVERSE" ACROSS THE UNIVERSE

And finally, using a highly directional antenna NASA has transmitted The Beatles' song "Across the Universe" toward the North Star. The transmission originated from the NASA Deep Space Network of antenna array. It marked the 40th anniversary of the song along with the 45th anniversary of the Deep Space Network and the 50th anniversary of NASA itself.

The transmission is aimed at Polaris in the constellation Ursa Major some 431 light years away. The song is currently traveling toward it at a peed of 186,324 miles per second. The target audience, assuming something is one out there, won't hear the broadcast until the year 2439.

According to a NASA press release the Beatles Paul McCartney responded to the planned broadcast by asking NASA to end his love to the aliens. Yoko Ono, the widow of Beatle John Lennon, was a pit more introspective. She said that she sees this as the beginning of the new age in which we will communicate with billions of planets across the universe.

Meantime we have been sitting around the Newsline office trying to think of some other songs that NASA might want to beam into space. Two came immediately to mind. First is Metaphor from the off-Broadway show The Fantasticks. The other is a bit more obvious but shows our age. "I Told Every Liittle Star" by songsters Linda Scott recorded back in 1961. (RW)

Source record: 3265

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

Due the renewing of Technician Pluses as Technicians, the number of
Novices now exceeds the number of Technician Pluses.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of February 23, 2008:

Novice - 20,119 (3.1%)
Technician - 297,709 (45.3%)
Technician Plus - 18,973 (2.9%)
General - 142,812 (21.7%)
Advanced - 64,883 (9.9%)
Extra - 112,411 (17.1%)

Total Tech/TechPlus - 316,682 (48.2%)

Total all classes - 656,857

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to February 23, 2008:

Novice - decrease of 29,210
Technician - increase of 92,315
Technician Plus - decrease of 109,887
General - increase of 30,135
Advanced - decrease of 34,949
Extra - increase of 33,661

Total Tech/TechPlus - decrease of 17,572

Total all classes - decrease of 17,935

>From February 22, 2007, to February 23, 2008:

Novice - decrease of 2,777
Technician - increase of 4,201
Technician Plus - decrease of 11,845
General - increase of 12,674
Advanced - decrease of 4,217
Extra - increase of 4,141

Total Tech/TechPlus - decrease of 7,644

Total all classes - increase of 2,177

Therefore the change from Feb 22, 2007 to Feb 23, 2008 was 0.33% increase.

Here are the guesses that were on the list.
N8UZE: 1% less to 1% more --> Average = 0% change <--- "winner"
of guessing game
N2EY: 1% more to 2% more --> Average = 1.5% growth <--- "3rd
place" in guessing game
KH6HZ: 1% less to 0% change --> Average = 0.5% decline <--- "2nd
place" in guessing game
N3KIP: 2% more to 6% more --> Average = 4.0% growth
KH6O: 6% more to 10% more --> Average = 8.0% growth
KK6J: 12% more to 14% more --> Average = 13.0% growth
KC2HMZ: 5% more --> Average = 5% growth
K8BSG: 2% to 3% more --> Average = 2.5% growth

Perhaps the next year will bring more growth or perhaps it won't.

What I think is important is that new Hams are coming on board to
replace those that were lost after the big drop-off happened. That drop
is very likely to have been caused by the so called "honeydo" Hams who
became inactive with the ascendency of cell phones.

It will take a lot of new Hams testing to replace that dropoff. It looks
like we are doing it, slow and steady. Just as it should be.

The focus of of this poll is to judge the impact of the elimination
of element 1 on the numbers of Hams. Is it possible that given the other
issue of drop offs, that it is very difficult to draw a reliable
conclusion from it?

> Perhaps the next year will bring more growth or perhaps it won't.

Hard to disagree with that! 8^)

Hi Alan

It is so hard to determine. It is possible that no one cared, or that it just takes time for news to get out - Hams are not a noisy publicity seeking bunch.

Or it could be that New hams are coming along nicely. We are testing and granting licenses at a pretty good clip. I don't have the numbers handy, Anyone out there have them? We did have that big drop off of Hams who have since moved on to cell phones - those who used the first non element 1 tested group to use repeaters for local family comms, which is probably continuing, and it will take several years and a lot of new hams just to tread water.

I think we won't really know until around 7 to 10 years have passed.

Easy - just go to

http://www.hamdata.com/fccinfo.html

For example, in the last 365 days FCC has licensed 27,211 new
amateurs.

> I think we won't really know until around 7 to 10 years have passed.

Complicated by the fact that the rules are rarely left alone for
anywhere near that long.

Consider the past 25 years or so:

~1983: VE system created; question pools become public, license terms
doubled to 10 years
1987: Old General/Tech Element 3 split into 3A and 3B, making it
easier to get a Tech
~1990: Morse Code test waivers make any class license available with 5
wpm and a doctor's note.
1991: Technician loses its code test.
~1994:Vanity call program
2000: Restructuring reduces number of available-to-new-issue license
classes from 6 to 3 and reduces both code and written testing for all
classes
2006: HF 'phone bands widened, particularly 75 meters.
2007: Morse Code test eliminated.

On top of all that is the "anticipation effect". It takes FCC a long
time to make up its mind, and that delay can have effects of its own.
(If you were thinking of buying something and heard there would be a
big sale next month, wouldn't you tend to put off the sale until
then? Or if you heard the price was going to rise significantly,
wouldn't you tend to buy right now?) The treaty requirement for Morse
Code testing changed in July 2003 but it took FCC more than 3-1/2
years to get around to changing the rules. Could it be that there were
some folks waiting for the change to take place?

And that isn't too bad. It also illustrates the extent of the falloff that those 27K only makes for a small increase in the total. Just something we have to live with for a few years.

That 10 year thing is the direct precursor to the present dropoff. Of course it just delayed the start by 5 years 8^)

>

> some folks waiting for the change to take place?

Absolutely! I know several myself, and as a VE, I expect to hear from more in the future. I had hoped that once the requirement was dropped, that they would not have waited so long to implement it.

Alan WA4SCA <ALANBIDDLE70@YAHOO.COM> wrote:

> So perhaps the code issue wasn't all that important, anyway.

Perhaps it is just ONE factor among many. Other factors may include:

* the almost complete lack of any reporting of this change to the world outside ham radio. I would like to see a poll that asks people what they know about this. My guess is that if you take one step outside of ham radio circles, you will find that no one knows anything about it.

* the aging (and death) of the ham population. The ten year license term means that, on average, it will be five years before a dead ham is dropped from the rolls, assuming that his heirs do not notify the FCC.

* We have no way of knowing whether a licensed ham is active, so there again, it will take years for inactive hams to be dropped from the license database, assuming that they take no action to renew their licenses.

In sum, I believe that the small change in licensing numbers does not rise to the level of statistical significance. Given the magnitude of the unknowable quantities described above, we probably cannot tell whether the population of live, active hams has grown or shrunken. Is there a statistician in the house? I would like to see an estimate of the margin of uncertainty of those numbers (plus or minus x percent), given the various unknown factors.

I don't claim to be a statistician but it is an easy bet that there are sufficient variables to place the current result within the error of the measurement technique. This is especially true when you add that magic word "active" to your requirement.

The most reliable statistic is the number of new hams being licensed. Even for those, it's not possible to say if they're "active" (no matter what your definition might be for that term). But if 27,000 people invested the effort to obtain a license during the last year, at least we know that about 1 in 10,000 people cared enough to study for and pass the exam.

Since most of the "outside world" doesn't and didn't have a clue about the requirements to get a ham license, publicizing the elimination of the Morse code testing would have had little to no impact. The only way it might have helped was in letting people know that ham radio exists.

Try more like 6 years since there is a two year grace period after the expiration date that also needs to be factored in.

C.

That assumes an even distribution of expiration dates. That's not
necessarily a valid assumption, because events like changes in the
vanity call rules have resulted in a lot of expiration dates being
clustered in certain years, leaving other years rather lean.
>
> Try more like 6 years since there is a two year grace period
> after the
> expiration date that also needs to be factored in.

That depends on which numbers are used. The numbers posted at the
beginning of this thread include only current, unexpired licenses, not
those in the grace period. So the 5 year number is
correct if we assume an even distribution of license expirations by
year. The numbers on hamdata.com do include licenses that are
expired-but-in-the-grace-period.

btw, in Part 97 FCC uses the term "expire" to mean
the end of the 10 year license term, not the 2 year grace period.

I think that most people who are technically inclined to any
reasonable degree have had some awareness of ham radio, at some point in
their lives. Most were deterred from becoming involved in it by the need
to jump through the hoop of learning a useless and obsolete "skill"
(yes, I know, you probably don't see it as such) that they found
repellent. Now that that hoop has been eliminated, the reason that they
never became hams has been eliminated. Once that word gets around, I
believe that many technophiles will slowly gravitate to ham radio (as I
did).

Actually, that would bring it up to 7 years (5 year "expected value"
on the random variable of 'term of license remaining at time of death'
plus 2 years of grace).

> their lives.

Agreed. But new hams don't just come from the "technically inclined".
In fact,
in many cases what first interested someone in technology was ham
radio.

There's also the issue of "old/inaccurate information". I have come
across people who
were knowledgeable about ham radio 30-40 years ago, but thought it had
died out in
the 1970s or so. Or who thought that the equipment had to be large,
expensive and
power-consuming. Others thought ham radio and cb were the same thing,
or that cb had
replaced ham radio (!)

> Most were deterred from becoming involved in it by the need

Whatever your view of the *test*, Morse Code is still in wide use in
amateur radio.
Therefore, by definition, skill in its use is neither useless nor
obsolete for hams.

> Now that that hoop has been eliminated, the reason that they
> never became hams has been eliminated. Once that word gets around, I
> believe that many technophiles will slowly gravitate to ham radio (as I
> did).

Of course more new hams would be a Good Thing. However, the relatively
slow
growth of the past year, while welcome, means that either there aren't
so many
people out there who were repelled by the test, or that they haven't
yet found
out it's gone. Or both.

I will continue to post these numbers in an effort to document what's
happening.

> > Try more like 6 years since there is a two year grace period after the
> > expiration date that also needs to be factored in.

> Actually, that would bring it up to 7 years (5 year "expected value
"
> on the random variable of 'term of license remaining at time of death'
> plus 2 years of grace).

No, 6 years is the right number if the grace period is being
considered. Here's why:

If the license term is 10 years and the grace period is 2 years and
the likelihood of
a ham dying is the same for any given year, then the median value is
halfway through
that combined 12 year period. Which is 6 years.

IOW, all else being equal, half of the hams who die in the 12 year
license-term-plus-grace-period
interval will do so in the first 6 years, and half will do so in the
second 6 years.

If the grace period is not considered, the median value happens at 5
years.

Of course, that sort of tautology would still hold if there were an
FCC regulation that all ham radio conversation must take place in Latin
and all new hams must pass a test in Latin.

I disagree. All hams will get the full 2 year grace period AFTER they
die (assuming that the FCC is not told of their deaths). It is a
constant, not a variable. 'Term of license remaining at time of death'
is the only variable. It has an expected value of 5 years. The full
grace period is added to that by default.
Put another way, my assumption is that all hams will renew their
licenses for as long as they live. Even if they die the day before the
end of their final term, they will still get the full 2 year grace. For
your model to hold, they would have to allow their final term of license
to expire and then live on into the grace period.

It holds anyway. Nobody is saying you *must* use Morse, but that doesn't mean an appreciation of it is not of use.

Personally, I appreciate *all* modes of amateur radio, even though I don't use most of them. Conversely, I would expect anyone who doesn't use the modes that I use to appreciate that *I* like to use them.

That doesn't follow.

There isn't a regulation that radio amateurs must use Morse Code on
the air. Yet they do - by choice.
So having the skills to use it is neither useless nor obsolete.

There's a mistake in your reasoning, I think.

> Put another way, my assumption is that all hams will renew their
> licenses for as long as they live.

That's not valid assumption, though. The renewal window is 90 days
before expiration but two years after expiration. A considerable
number of hams renew in the grace period. How many? I do not know

> Even if they die the day before the
> end of their final term, they will still get the full 2 year grace.

Of course. But at the same time, they could renew on the last day of
the grace period, too.

> For
> your model to hold, they would have to allow their final term of license
> to expire and then live on into the grace period.

Which does happen. Some hams just forget, others need time to figure
out the new regs, etc. 90 days isn't that long of a time.

And some just lose interest, for a variety of reasons besides death.
This isn't a new thing - read some ham's bios, and more than a few
talk about how work, family, and other things crowded out ham radio
for them at some point, they sold their equipment and let their
license expire, and then came back years later. From the standpoint of
license numbers, it doesn't matter if a ham dies or just lets the
license expire, the same effect happens.

Actually, we need not consider the grace period at all, because we
have sources of numbers for the current, nonexpired numbers of
licenses.

It would be interesting for sure. Ham Radio is one of those niche activities that isn't geared toward the average person. And that really isn't all that bad a thing. Some people pick hobbies because a lot of other people are doing the same thing, Others pick ones like amateur astronomy or Ham radio because its what they enjoy.

At any rate, its all good, I think.

Isn't it great that Ham radio can be still pursued by older folks? I know that that is a bit of a non sequitar, but the thought just crossed my mind. 8^)

In an overall sense, it is a little hard to come to a definitive idea of how many are active, and most analysis only gives us rough trends.

I am pleased that the FCC is issuing a goodly number of new licenses, and that at least the big dropoff is at least negated for the present. I personally am happy with only a small increase in numbers.

I think that production of stats on active Hams is very difficult,
certainly it can't be gleaned from totals.

That would only be true if they knew what the requirements are. Very few
were aware that Morse code was required. No one is deterred by a
requirement that they don't even know exists.

Please define 'older folks.' That remark seems to me to be verging
too close to that of a confrontational remark. :-(

The practice of operating a radio has never been any sort of test
of athletic ability or that of stamina or physical strength only
possible by those in the 20s and 30s age groups.

The 25th of February 2008 was the first anniversary of my passing
my first amateur radio license test. That day was close to the
51st anniversary of my passing my first commercial radiotelephone
operator's test at age 23. I was 74 on 25 Feb 07 and it was no
more difficult nor easier a year ago than it was to pass a
similar FCC test 52 years ago.

Since I've kept daily statistics pages from both www.arrl.org and
www.hamdata.org, here's some items of information of the past year
(25 February, 2007 to 2008) from Hamdata that isn't reported on
the ARRL license stats page:

No Longer Licensed [Expired] : 26,127
NEW : 27,211 (positive offset by 1,084)

Class Changes : 32,021

License numbers, total of ALL amateur radio licenses -
2 July 2003 : 737,938
25 Feb 2008 : 722,588 (deficit of 15,350)

About the only thing one can infer from those is that there IS
a small increase in newcomers versus expirees...but the total
of all licenses is still short of what it was about 4 1/2
years ago. At the present rate of license totals increase,
that deficit will not be offset for another 15 to 16 years.

The number of existing-license class changes has been larger
for this past year than previous one-year periods. That seems
to be the major outfall of the latest change in regulations for
amateur radio licenses.

>> In sum, I believe that the small change in licensing numbers does not
>> rise to the level of statistical significance.
>
>In an overall sense, it is a little hard to come to a definitive idea of
>how many are active, and most analysis only gives us rough trends.

The word ACTIVE has two meanings as used in this thread. The
'active' amateur radio licensees in the FCC use of the word
refers to the license itself; i.e., whether it is valid for
legal operation of a transmitter as required by a particular
radio service. The word 'active' as many use it elsewhere
refers to whether or not one USES a license for the purpose of
transmitting (as required by law). There are no definitive
statistics on USE insofar as an amateur radio license that
I've seen.

>I think that production of stats on active Hams is very difficult,
>certainly it can't be gleaned from totals.

I disagree. One of the major uses of the first major computer
systems was searching, sorting, and compiling totals of some
programmed-in sorted-for subject. That was a selling point for
the old IBM punched-card tabulator in electro-mechanical IT
operations of the 1940s. Today it is greatly aided by the mass
memories of 250 GB to 2 TB hard drives...which anyone can buy
for reasonable cost off-the-shelf at places like Fry's
Electronics. Sorting and searching programming methods have
been well-known to IT programmers for half a century.

The FCC daily and weekly database files are all available to
anyone with high-speed access capabilities. Each is so large
in size that using a dial-up connection would require about
a half day to download. ALL statistical website providers use
the SAME database so none is more 'official' than others.
What the statistics providers DO with their data is up to them.

There isn't any sampling or 'plus or minus percentage' in
regard to the FCC license class information in its database
files. It isn't a result of polling of any kind. It is data
direct from the only agency that grants amateur radio
licenses in the USA. Totals are what they are.

"Radio for its own sake" (which is what amateur radio is really all
about) has never been a mainstream sort of thing. Just look at
the number of licensed US hams compared to the US population
at any time since licensing began.

> At any rate, its all good, I think.

Yep.

> Isn't it great that Ham radio can be still pursued by older folks?

It's great that people of all ages can be hams. Young, old,
middleage, newcomers, oldtimers, etc.

> > In sum, I believe that the small change in licensing numbers
> > does not
> > rise to the level of statistical significance.

IMHO, what *is* statistically significant is that what was a slow
decline has turned into a slow increase. What will be interesting
is if it continues long-term.

> I think that production of stats on active Hams is very difficult,
> certainly it can't be gleaned from totals.

There's also the problem of what constitutes an "active" ham.
Obviously someone who is dead or who never gets on the air
or otherwise participates isn't "active".

But what about the ham who operates a few contests a year?
Or the ham who does a lot of building and experimenting, but
little operating (and whose operating is mostly to check out the
latest project)? The ham whose activity is teaching classes,
running VE sessions, Elmering (in person and online), writing,
etc.? The ham whose focus is public service? Etc.

All sorts of activity - and it's all good!

The ARS numbers Feb 2008 thread got me to thinking, when the topic started shifting toward who knows about what relating to Ham radio.

I think it is pretty fair to say that the ARS will never be a mainstream hobby or avocation. I really don't think that that is even a good idea, after some thought.

For myself, I am a inveterate tinkerer, and love to build things. My license allows me to legally access some pretty high powered stuff and work on the same. My path to the fold was in looking at ways to apply amateur radio to my other hobby, Amateur astronomy. Funny though, the Ham radio took over, and is now my main hobby, I never did apply it to astronmomy.

What attracted you, and can we get some ideas from that to attract or identify and attract new blood?

It's much like other hobbies -- there are people who enjoy collecting stamps or snapping pictures, but these aren't "mainstream" either. There will always be competition for peoples' spare time, and ham radio is one of the things that people can enjoy in their spare time.

> What attracted you, and can we get some ideas from that to attract or
> identify and attract new blood?

I would certainly like to see some of those ideas.

I think my path into ham radio was fairly typical for the 60's -- I got interested in radio and electronics, had a friend who had similar interests, and ham radio was a good fit. Not only did it provide a way to learn about electronics but it got me introduced to many people who I would never have met otherwise.

I suspect that my analog in the current generation pursues a similar interest via their computer. There's an interesting correlation between meeting people at the club meeting and on the air, versus meeting them via the Yahoo Group, the chat room, or via online game playing.

My path back into ham radio was via the public-service aspect. When I retired and moved to a place where I could participate in the hobby, I got back on the air and tried several aspects of the hobby -- NTS, contests, DX, general ragchewing. None of them really caught my fancy, for various reasons. Then I ended up in Mississippi in the Katrina effort and that activity did capture my interest. Since then my ham-radio activity has been primarily related to public service and emergency communication.

I'm not suggesting that this is the only way to recruit people into the hobby or that it's the only segment of the hobby that's worth anything. It's MY primary interest, and if other folks enjoy DX or contests or whatever, that's wonderful. Different people enjoy different things, which is one of the great things about ham radio -- it's many different hobbies, all rolled up into one. The difficulty is selling this to the general public.

You missed my point. The figures for new licenses and expired licenses are, no doubt, perfectly accurate. However, those quantities may be eclipsed by two other variables that we cannot quantify:

1) The number of hams who have died but have not yet been dropped from the rolls because the FCC does not know that they are dead

2) The number of hams who have stopped turning on their radios

> identify and attract new blood?

>From as far back as I can remember, I was interested in technology - how things worked and what they could do. The kind of kid who's always asking questions, taking things apart and putting them together, etc. I found electricity particularly interesting.

This interest was aided and abetted by reading everything I could get my hands on. Libraries and bookstores were special places to me.

I did the usual Erector-set and battery/flashlight bulb stuff at a very young age. Then at about age 10 I found a book called "All About Radio and Television" which explained the basics of radio and how to build a simple radio using a razor-blade-and-pencil-graphite detector. I built one, strung a wire out to the crabapple tree in the back yard, and heard WPEN. I was hooked.

The book also mentioned various kinds of radio besides broadcast radio and TV. Of greatest interest to me was something called "amateur radio", where ordinary people of all ages and all walks of life had their own radio stations that they used to communicate with each other over great distances. Also of interest was "shortwave broadcasting" which came from other countries.

Nobody in my family was a ham, nor were any of my neighbors. None of them knew any hams, either. Not much detail on amateur radio was given in "All About Radio and Television", but I knew where to look for more info - other books. Soon I had a much clearer picture of what amateur radio and shortwave radio were all about. First order of business was to get a receiver in order to listen to "hams" and shortwave stations, so I built one based on information in the various books. It was a simple two-tube regenerative set, made mostly from salvaged parts. It wasn't the best receiver in the world but it worked well enough for me to hear BBC, Radio Moscow, the Voice of America - and "hams"! I wanted to talk to those folks!

The books explained that being a ham required earning an FCC license, so I set about doing that. I learned Morse Code by listening to hams use it on the air, and theory from the books and by building and improving the receiver. By the time I was 12 I figured I knew enough to pass the Novice test, so I set out to find a local ham who would be a volunteer examiner for me. I located one by the antenna in his yard, and he referred me to another amateur who did the tests. I passed on

the first go and built a simple transmitter while waiting for the license to arrive from FCC. Which it did on October 14, 1967.

I went on the air and began making contacts. It wasn't easy with the equipment I had and my basic skills, so I learned to be a better operator and how to build better equipment.

Now it's more than 40 years later and it's as much fun to me as ever.

What attracted me was the idea of building my own radio station and using it to communicate with like-minded folks all over the world. That the results were random and unpredictable only added to the attraction. I didn't think radio was "magic" or "mysterious", just a lot of fun.

A big factor in the attraction was the attitude expressed in the books. None of them said learning radio, getting a license or building equipment was difficult. None said a ham had to be older than a certain age, have a certain income, education or IQ level, be of a certain gender or ethnicity, etc. The required math, physics, chemistry and electricity, and Morse code, weren't presented as obstacles; just stuff that anybody could learn. The whole process was and is a lot of fun. A challenge, not a "hoop" or a "barrier".

None touted amateur radio as a replacement for other communication methods or as a social community, though they did mention the public-service aspect. Sure, there was no internet back then in the 1960s, no iPods, cell phones or video games, etc. But we had radio and TV, long distance telephones, music, movies, etc. Amateur radio wasn't a replacement for those things, it was fun in itself.

IMHO the way to "sell" amateur radio isn't to present it as a replacement for something else, but as a unique activity with many facets. Some will get it, others won't, no big deal.

Our Section Manager came up with a great idea. We have a very successful youth group in the far reaches of the state. There are, of course, a number of other amateur radio youth groups around the state, having varying levels of success.

In April, we are going to gather kids from all these groups together, ply them with pop and pizza, a have them tell us what it was that attracted them, and what we could do better. What better way to figure out how to attract new hams than by asking the new hams themselves, and especially the young ones who we need, and who are likely to be more open than their older counterparts.

By the way, that successful group out in the boonies has started another chapter in the state, and yet another in a neighboring state. They're doing something the kids lke.

That pretty much answers your question, Len. Lots of people who don't
"get around very well" can still have a blast. And fortunately there are
usually other Hams who can help with the more physical things like
putting up antennas, climbing towers, and the like.

Perhaps I should have been more clear. It is hard to determine if a Ham
is active or not by just being licensed. An active license is not
necessarily a sign of an active ham. Even trying to define "active" is

difficult.

In that instance, I was referring to Klystron's "active".

Let me clarify one point: I never suggested that Morse code was an obstacle because it was too hard. I have known any number of people who were put off by Morse, myself included, because it was archaic and unrelated to electronics. I have worked in the electronics field and I have met any number of people who knew a substantial amount about electronics in general, as well as ham radio, but were not hams. They often mentioned Morse when asked why that was.
If you can look at it objectively (I realize that it is an emotionally charged subject), you cannot make a plausible claim that there is anything inherent to radio or electronics about Morse. Morse is a linguistic construct, like a semaphore flag code, that was devised in order to enable communications using a device that was incapable of transmitting voice. It is as if prospective hams were told that before they could be allowed to handle electronic gear, RF emissions and high voltages, they first had to learn how the ancient Egyptians wrote with hieroglyphics. Then, they would have to write a page of hieroglyphics themselves and then read a page that someone else had written. If you think that that is absurd and that hieroglyphics have nothing to do with radio and that you would not be willing to waste your time on such a pointless and irrelevant digression, then you understand the frustration of electronics enthusiasts with the old system and with those who embraced it.
As far as the difficulty is concerned, I went from SWL to Amateur Extra in 9 weeks (3 separate test sessions, 3 weeks of studying per test). After leaving the material for about a month, I resumed studying and obtained a General Radiotelephone Operators License with a Radar Endorsement in about another month. I felt that the entirety of the material, on all six tests, amounted to the equivalent of about a semester of General Chemistry.

Same here.

>Nobody in my family was a ham, nor were any of my neighbors. None of

I had an uncle living some distance away, who sent me an old ARRL
Handbook that I loved to flip through, more looking at the pictures
than reading the text, thinking how neat it was to be able to build
stuff like that. Also there was long ago a radio section in Popular
Mechanics with construction articles. And the days when just about
every family had a radio receiver that would get shortwave as well
as broadcast band.

>What attracted me was the idea of building my own radio station and
>using it to communicate with like-minded folks all over the world.
>That the results were random and unpredictable only added to the
>attraction. I didn't think radio was "magic" or "mysterious", just a
>lot of fun.

I guess I was that way too - it's only fairly recently that I have
come to realize it is almost magic that you put a few watts of RF
into an antenna, and the energy is radiated out into space, and
induces a tiny signal in every conductor it passes, and if that
conductor is an antenna then the tiny signal is enough to amplify
and detect and use for communication.

I know another thing that pushed me along was RTTY - I had always
been fascinated by Teletype machines, and when I learned that hams
could have them and use them to communicate I was really excited.
Without that extra push I might have delayed getting a ham license,
or maybe just continued as an electronics experimenter and SWL.

I remember my first crystal set. It worked not very well, and my kid's mind thought "maybe if I put a battery in the circuit it might work better." Lot's of crackles and noises in the earphone, and pretty little sparks at the pencil/razor blade interface. Still didn't work, but I was still hooked.

That battery reaction should have held a clue why it didn't work in the first place. But hey, I was a dum liddle kid! ;^)

My first exposure to amateur radio came from a Boy Scout merit badge cook in which the scout would learn Morse code. I didn't get that badge, I stumbled over... well you know. Set mo off on the road to perfidy, hehe.

I was taking a lot of household appliances apart, and not being real clever about putting them back together. This caused quite a problem until my Grandfather decided to send me a "care package about every two months that had old radios and other electronic junk that he salvaged from where he worked. Joy!

That's fine, people have all sorts of reasons for not being hams.

However, Morse Code is *not* archaic, and *is* related to amateur
radio, because
hams do use it extensively - today, right now.

> If you can look at it objectively (I realize that it is an

That's one reason for it. But even after voice radio was invented,
Morse code
use in radio continued, because it has certain advantages over other
modes.

> It is as if prospective hams were told that before

Sorry, that's not a convincing analogy, because nobody uses Egyptian
hieroglyphics
in amateur radio - and they never did. But Morse Code was and is used
in amateur
radio. That's a big difference. Knowing Egyptian hieroglyphics doesn't
help one
with amateur radio operation, but knowing Morse Code sure does!

IMHO a better analogy is this: Suppose that all drivers had to
demonstrate the
ability to drive a car (in first gear, at 5 mph) with a manual
transmission in order
to get a driver's license, even if they only intended to drive

automatic-transmission
cars (which far outnumber manual-transmission cars today).

> embraced it.

See above. Morse Code has a lot to do with amateur radio. Whether that
means it should have its own special must-pass-to-get-a-license test
is
a completely different matter. And it's been settled by FCC.

I went from Novice in 1967 to Technician and Advanced in 1968, then to
Extra in 1970.
In those days there was a 2 year experience-as-a-General-or-Advanced
requirement to
even try the Extra exam. I never thought the exams were very difficult
if someone knew
a bit about the subject.

I'm not ashamed to admit it, I came into the hobby from CB. Some friends had formed a CB club back in the early 80's just when CB became legal here in the UK (sadly using different frequencies and FM rather than AM as in the US) but we soon realised its limitations and when a few of them became licensed I was quick to join them.

Just celebrated my 25th anniversary, licensed on 21 February 1983 :-)

The delay of 'knowing who died' in regards to RADIO AMATEUR
licensees is only two years...the grace period. After that
and no renewal, the license expires. LICENSE expiration is
a known as far as the FCC database is concerned.

Since amateur radio is a HOBBY, not a profession, there's NO
requirement that anyone 'report in' on someone's condition.
Some become disenchanted with the activity and just quit or
have too many other activities to continue or might be laid
up with some kind of illness. It was never a requirement to
continue being an amateur radio licensee forever once granted
a license...no more so than being interested in radio long
ago was a mandate to get an amateur radio license. :-)

In my opinion, the granted license totals - even if holding
steady despite general population increases - serves as an
indicator in the USA that the amateur radio service will
continue among all the other radio services here for the
near future.

So, the licensee totals have dropped 2% in about 4 1/2 years since mid-2003. The last year has seen a 0.15% increase in totals, a rather insignificant gain, but a gain nonetheless.

Many years ago at a small microwave company, all of us were curious at the absence of one technician who just didn't show up for work. The small company, busy at keeping afloat, didn't investigate until two months had passed. Turned out the guy just got tired of what he was doing and 'quit' without notifying anyone. Later, at a larger corporation, we noticed that one engineer didn't show up for two weeks. Corporate personnel department was notified he'd been killed in an automobile accident, his family too involved with that tragedy to notify his employer. There's many reasons why someone stops doing what they were doing besides such extremes.

You managed to get that sentence approved by the moderators?!? :-)

>My path to the fold was in looking at ways to apply
>amateur radio to my other hobby, Amateur astronomy. Funny though, the
>Ham radio took over, and is now my main hobby, I never did apply it to
>astronmomy.

Back in the 1960s, my lead man at Electro-Optical Systems was both
a technician class licensee and a very hands-on telescope maker.
He had ground his own 6" mirror for the telescope he was using and
was slowly grinding a 10" for a bigger scope. I came up with a
design and breadboarded a crystal-controlled time base for a
sideral drive for the ten-incher. Done with now-obsolete RTL
from Fairchild, it would be a snap to do it today with a single
Microchip IC plus a small stepper-motor or synchronous motor
driver circuit. Doug moved to Hawaii to work on the BIG
telescopes there so the ten-incher project (and its final
drive) were put on hold.

BTW, he had been into amateur radio first, then converted to doing
amateur astronomy. Folkses mileage differs. :-)

>What attracted you, and can we get some ideas from that to attract or
>identify and attract new blood?

Do we HAVE to 'attract new blood?' Serious question.

I've already told my personal story. It seems to rankle
some old-timers because it is non-standard to the 'common'
experience of USA radio amateurs...so I won't repeat it.
<shrug> After starting in the electronics industry 54
years back, doing high-power HF communications transmitting,
the elimination of the morse code test allowed me to get
a license (told that story, too, but it is also non-standard).
In talking to the applicants a year ago and several others
locally in the past year, their interest in getting a
license vary considerably. But, nearly all of them go the
Technician class route for local radio contacts, a sort of
social order thing possible in a large urban area. It was
like the CB radio craze and then the BBSs that preceded
the Internet era. Few of those got involved via the

supposed paradigm of 30 to 50 years back that lots of old-timers repeat. In this newer world of the Internet and many, many components available for lots of different electronics things, plus ten kinds of consumer electronic products (at relatively low cost) on the marketplace, the old concept of 'having one's own personal radio station' is diminishing rapidly.

As I see it, the old reasons-for-being of amateur radio aren't applicable anymore. Technology in electronics has long since leaped ahead of any state-of-the-art advances done by amateurs long ago. What I see are two areas -

1. The just-plain-for-fun boosting, for whatever purpose in communications, whether in a local urban area or a bit farther out...and an emphasis on trying out things on a personal-enjoyment level. We are NOT required to DO certain things in the hobby just because some old-timers say we MUST do those besides the regulations that all must obey.

2. De-emphasizing the 'necessity-to-be-a-part-of-the-community-as-a-service.' Now, I know that amateur radio CAN help in emergencies and all that 'service-to-community' PR can persuade some lawmakers to this 'amateur cause' but it seems to me to have gotten too big a share of the open political statements in periodicals. Those who really care about community service can just as easily go DIRECT to such existing organizations. With a total licensee database showing 720+ thousand licensees today, that should be large enough to show lawmakers that amateur radio has a large following.

I'm no expert on PR or marketing, don't have the explicit solution to get more newcomers. As I observe the hobby, it will last at least a couple of decades. That's good enough for me. USA amateur radio stands or falls by what its publicists say and try to convince new members...seldom by what the old-timers claim. Times have changed (many times over in my lifetime) and all must adapt to that, not to hold onto ancient paradigms that no longer apply.

Dee is correct. Some hams may die with 10 years left on their licenses. For others, 9 years may remain. For still others, 8 years may remain (and so on). For the mathematically inclined, the "expected value" equals the sum of [i as i goes from 0 days to 3652 days] divided by 3652 days (the number of days in 10 years, including 2 leap years). The result will be in days, so divide by 365 to get years (the answer is 5 years). Add a 2 year grace period and the AVERAGE ham will remain on the rolls for seven years after his death.
When you consider the age demographics of ham radio, standard actuarial tables may lead you to conclude that we are probably in the middle of a large die off. My guess is that the number of dead hams still on the books is far greater then the thousand or so net gain that comes from simply subtracting expired licenses from new license grants. Then there is the matter of hams who no longer turn on their radios, whose number is unknowable.

Your group has hit on the correct way to attract the young folks - by
getting a number of them together.

If a young person comes into Ham radio all by themselves, it isn't as
interesting for them, and they can't do as many things easily as if they
were older. Its been my experience that young people (tweens and early
teenagers) can get a little lost at club meetings and activities like
Field day. And these days, there should be an approved adult to
chaperone them at events who has been cleared by one of the state police
background investigations.

But if you can get a fair number of young'uns who can relate to each
other well, they can become good hams and a future resource.

We do need new people to replace those who leave for one reason or the other. I want someone to talk to on the other end, and don't want the Amateur radio community to become closed and eventually die out.

I'm fortunate that I never had that experience. Of course, if someone ever did tell me how I was supposed to use my time in the hobby, I think I would politely decline, and go do what I wanted to do. 8^)

Here we agree. While I am impressed with what Amateurs have done in emergencies, the way that the public service genre of the hobby has morphed is a little troublesome to me. I don't know if you were watching the group a few weeks ago, but I related a story about an emergency comm person speaking at a club meeting. When a member noted that the ARS frequencies were there for use after the normal comms weren't working, he replied " Every thing we do is a matter of life and death, so we can use your frequencies any way we wish".

That was not only wrong, but scary that people that think in that manner are coming into the hobby with such an attitude. He (and some like him) come in to talk to the people who will be building and maintaining repeaters and infrastructure, and lay one like that on them?

As N3LI wrote, that would be sad!

However, when it showed up in the totals is a matter of which totals
you use.

If you use numbers that include the entire FCC database, such as
hamdata.com, you get both unexpired, current licenses and expired-but-
in-the-grace-period licenses, and it takes 12 years before an
unreported death shows up.

But if you use numbers that include only the unexpired, current
licenses, such as ARRL and AH0A, it takes 10 years before an
unreported death shows up.

Note that the terms "expire" and "expiration" refer to the end of the
10 year license term, and do not include the grace period. That's not
my definition, it's FCC's definition. Hamdata.com uses the term "no
longer hams" to indicate licenses which have reached the end of the
grace period without being renewed.

Of course in real life there are several factors which complicate the
issue and make simple conjectures inaccurate:

1) An unknown number of deaths *are* reported to FCC by family
members. Often this is done so the SK's callsign can be transferred to
another amateur in the family, or a club.

2) An unknown number of amateurs renew in the grace period.

3) Not all licenses which expire are the result of death. It is not
unknown for a licensed amateur to lose interest and let the license
not only expire but run past the end of the grace period. Years later,
the ex-ham's interest is revitalized and s/he gets a new license. This
was probably more common in the days of 5 year licenses but one still
encounters recent "retread" hams today.

I agree, but I haven't found the secret for getting them together. How does one publicize this first gathering? I have not found the term "ham radio" to be effective in attracting young folks.

How about some more detail from the original poster of this scheme in terms of how they got it off the ground, and how they manage to keep it going?

Thanks and 73,

Well, I wasn't the guy who got the original group going. However, my (vague) understanding is that the DAR Girls and Boys Club (I hadn't even known there was such a thing) was the original resource. Whether the DAR approached someone looking for an activity for these kids, or whether some interested ham was already a member, I don't know. Somehow they hit upon the idea of HF Contesting, and formed the "Young Amateurs Contest Ham Team" (YACHT). This, for whatever reason, took off. Apparently these kids enjoy contesting. As far as I know, the amateurs involved weren't big contesters, so this must have been the kids' idea.

On reflection, contesting seems a pretty good idea. Kids are often reluctant to have conversations with older hams on the air. A contest is an easy way to get a lot of contacts without the risk of being asked hard questions.

Locally we did have the 4H approach us looking for something of interest to the boys in 4H, since most of the activities seemed more oriented towards girls. As it turned out, we didn't attract many boys; a few girls but a bunch of parents! So that didn't work out for us. We still put together a little booth at the 4H annual pancake supper, but that really hasn't been terribly productive. One local activity that does seem to be working out is a school club. A couple of amateurs go to one of the middle schools once a week for a meeting of their radio club. This has gotten us a handful of new hams. Not huge numbers compared to the population, but every little bit helps.

Someone mentioned having mentors for the kids background cheked, and in this day and age, there is something to be said for this. Most RACES organizations now require background checks, so your RACES organization might be a source for mentors for these kids that have already been vetted.

..

Although I have a technical background, my post secondary "eddycaytion" is actually in the art field, and In my job and life I cross between the two.

I stumbled upon this site, and was pleasantly introduced to "Steampunks"

(Hang with me here, this is actually on topic-despite what it sounds like so far)

These folks take a whimsical view of modern life, and like to take modern throwaway technology and modify it to turn it into something that you wouldn't throw away. Typically they alter items to look as if they were built in the late 1800's, toward the end of Victorian times (hence the word "Steam" as a retro power source. Hand crafting is mandatory.

Now to the Ham radio apps.

In a unique (and a little bizarre) melding of technologies, one practitioner has built and implemented a Telegraph sounder that reads RSS feeds.

http://steampunkworkshop.com/telegraph.shtml

I was hooked.

Although the Amateur radio world does not have many examples of art - though some folks come pretty close with some old time stations, I found the method I'm going to use for my next shack redo. I'll have to share the pictures of the same. Now to start scrounging brass....

Certainly some will find this odd, but I like a little aesthetics in my hobbies along with the technical.

Keep in mind that the background checks for working with children are
looking for different issues.

When I was prez of an association and coaching youth Ice Hockey, I
often had to explain that we weren't looking for violations of basic
law, that no one was going to be rejected because they had an underage
drinking offense or the like. No one is perfect. The only thing that
would trigger the thing was violations involving children.

The RACES checks might be a bit different, but I'm not sure. I'm almost
certain the Red Cross' ones are.

RACES background checks are, of course, dependent on your local emergency
manager. Most, however, a looking for pretty much the same things. In the
event of an emergency you might be deployed at a shelter or other location
where there might be vulnerable individuals. That is the same sort of thing
I would suspect one would want to know if someone were to be around
children.

But it is a good caution. Different jurisdictions can be amazingly uneven.
I know of one jurisdiction where a deputy interviews the candidate's spouse.
The concern is that the volunteer work might interfere with the home life.
So clearly, YMMV.

[snip]

Mike,

If you have an email address for Mr. von Slatt, please send it to me:
his description of the sounder he built says that it draws 3.5 amps at
12 volts, which sounds very high compared to the sounders I'm familiar with.

FWIW: there is a lot of information available about using sounders and
connecting them, via phone lines, computers, and direct wire. Civil War
reenactors and other telegraph buffs sometimes use a "Dial-up Morse"
set, which allows for "compatible" operation between two key/sounder
pairs over regular dial-up modems. The circuit can be easily modified
(as mine has been) to hook up to a computer for sounder practice.

Those interested will find lots of good information at
http://www.w1tp.com/ and linked sites.

That seems a tad premature to me. At present there are 722K TOTAL
licensees and the expiration rate is roughly 27K/year. If that
keeps up without any newcomers, it would be 26.7 years before all
were gone. [of course there will be newcomers...but how many
depends on the attitude of the old-timers they come in contact with]

>> ... We are NOT required to DO certain

Well, from my experience (at work or at play) I've had some
who INSISTED on telling me what I 'should' be doing. Some
of those got rather antagonistic about it. "We don't DO that
kind of thing in <fill-in-the-blank>" kind of comment. It was
so prevalent among amateur radio licensees that I encountered
that it turned me off of bothering to get a license for a long
time. That's been my experience over the last half century and
I spent that time working IN the electronics industry.

I'll have to say that the above attitude was reflected in the
older amateur-radio-interest newsgroups and was partly due to
the creation of rec.radio.amateur.moderated.

>... I don't know if you were watching

>
>That was not only wrong, but scary that people that think in that manner
>are coming into the hobby with such an attitude.

That person was more right than wrong. If one bothers to look,
the small-number Parts of Title 47 C.F.R. state clearly that
ANYONE can use ANY radio frequency to call for assistance if
a situation is really life or death...licensed or not. True.

Phil Kane could probably quote the Part and wording off the
top of his head but, not being an attorney, I would have to
search the Parts (all freely accessible). Besides, someone
in here would want to start a whole steamy argument thread on
that, arguing minutiae on the whichness of the what...:-)
Memory says it is the Part on commercial radio licenses but
undoubtedly someone in here will say 'I am wrong.' [sigh]

Radio amateur licensees are not bound JUST to what Part 97
says. The whole of Title 47 applies, even if 99+% has nothing
directly to do with the amateur radio service. But, with REAL
life-and-death situations, anyone can use any frequency at any
time with or without any license.

>He (and some like him)
>come in to talk to the people who will be building and maintaining
>repeaters and infrastructure, and lay one like that on them?

Let's take that IN context. Consider that the attending radio
amateurs might ALSO have an 'attitude' going. Consider that
lots of government infrastructure radio facilities are kept
going 24/7 expressly FOR the purpose of life-and-death comms
needs. Amateur radio repeaters aren't. Amateur repeaters
are there primarily for the benefit of other amateurs.

I don't know about your local group, but I've seen (in real life
as well as in print) some groups that are simply too full of
themselves with self-righteousness. Such folks have a terrible
attitude and couldn't negotiate anything unless it was in their
favor. Anyone coming in contact with them would tend to reply
in-kind.

Now, in my area, I'm GLAD that the commercial, professional
radio services ARE there for anyone's benefit 24/7. LAPD and
LAFD are up and running as are the neighboring incorporated
cities of Burbank and Glendale (with nice cooperative ties
between all the government facilities). The Greater Los
Angeles Emergency Communications Center is staffed and ready
to go into action any time there is a REAL emergency and they
can tie into dozens of utility companies and other firms for
unusual emergency situations. It was put to the test on
17 Jan 94 with the Northridge earthquake and passed. Since

then it was improved via the LAFD Emergency Communications Service which donated old, unused buildings and bought or converted busses and radio equipment. I took my amateur tests at an 'Old Firehouse' that is now part of that LAFD sub-organization. Nice civic cooperation by the LAFD.

I experienced that Northridge earthquake first-hand and helped a utility company restore services. All the electric power of an area populated by 10 million or so were WITHOUT electric power for half a day. Didn't see ANY sign of 'amateur radio emergency' groups until two days AFTER the 17th. FEMA flew in RF-plus-video terminals and put them in service the day after. I'd like to say something positive about amateur radio since I am a licensee in the radio service, but there wasn't much evidence of it. I've been a commercial radio licensee for 52 years and can't forget that...I have to give credit where it is due from REAL experiences, not some nebulous 'future plans' or PR write-ups that appear only within amateur radio interest groups.

Kudos to those working to bring new folks, young and old, to ham radio.

Some observations from a ham who started out in ham radio at the age of 13 (in no particular order):

1) Don't just go for high schoolers. Middle-school and even elementary schoolers can be hams if they're interested enough.

3) Don't try to sell amateur radio as a substitute for cell phones, the internet, or other communications methods. Sell it as a unique activity with its own unique attractions and rewards.

4) Scouting has a long history of connection to amateur radio. Some councils have pretty serious amateur radio programs, and always need more help.

5) Don't assume what parts of amateur radio young people will or won't be interested in. Emphasize the wide variety of activities hams do, and how much choice there is.

6) Don't assume that younger hams only want to associate with other younger hams.

For me, part of the attraction to amateur radio was the opportunity to be part of a community where one's age, gender, income, etc. are not a factor. Morse Code operation made this possible - on the air with that mode, nobody knows how old you are. You can interact with other hams of all ages. You're judged by your skills and signal quality, not how much you spent on your rig, etc.

So is mine...as an illustrator (an artist who draws/paints things as
they really are). I went for engineering after my Army service.

>I stumbled upon this site, and was pleasantly introduced to "Steampunks"

I admire the heck out of the excellence of that website and its
gorgeous
photos. Really well-done craftsmanship on web page design. However,
it
begins to look a lot like 'eye candy' for those who love to do things
the old-fashioned way.

>In a unique (and a little bizarre) melding of technologies, one
>practitioner has built and implemented a Telegraph sounder that reads
>RSS feeds.

NO WAY can that sounder 'copy' digital data from any Internet.

Sorry, but there's just TOO MUCH MASS in that sounder to move
anything that fast...not even at 60 WPM speeds of old Teletypes.
Those who get all upset about my absolute statements should
open up and study any OLD Model 15 to 19 TTY from Teletype.
That Chicago firm KNEW how to make machinery work fast and long.

>Although the Amateur radio world does not have many examples of art -

Our 'art training' must have come from very different schools.

I would consider the Hallicrafters SX-28 to be of very aesthetic
appeal to many. Never owned one, just used one a few times. As
a 'communications' receiver it worked fine technically. It both
sounded great (with big speakers) and had a cool look to it.

As to transceivers, I would consider the Collins KWM-2 to be of
finer aesthetic value from the looks and proportions and general
useability of its outside. Never had one of those but I've used
one and tested several older ones. Neat and compact (for tubes)
it also had a 'with it' cool look with nicely-matched colors
with sleek proportions (even if the front was a bit off symmetry).

Some time ago I found a website that showed the evolution of the
Hallicrafters S-38 external appearance. Final versions of that

model were redesigned by a professional design firm. Technically,
that one was just a glorified All-American 5 with added 'SW' bands
and thus had (actual, by comparison with its contemporaries)
lots of deficiencies. Mythos of so much shared use among old-
timers made it some kind of icon. <shrug>

>though some folks come pretty close with some old time stations, I found
>the method I'm going to use for my next shack redo. I'll have to share
>the pictures of the same. Now to start scrounging brass....

Try not to forget that brass will oxidize from exposure to air.
Stock up on Glass Wax too, it works well on a continuing need
to make brass shiny again. And again. And again.

PLATE the brass with something to avoid all that dog-work
shine-up that you will need. Find a good electrochemical shop
and make some deals there. It will save appearances a lot
longer than all that necessary polishing later.

>Certainly some will find this odd, but I like a little aesthetics in my
>hobbies along with the technical.

So do I. Our difference is that I do an innate merging of
technical functionality with outward design and color. Icom
'basic black' (with white accents and sparse color in legends)
does it for me...who also is on intimate acquaintence what the
functions are. The fine-grain, DISTINCT black on white screen
appearance does the final choosing for me. Sorry, but orange
and gray or green and gray displays of other makers don't sit
well with my taste. One is always looking at the front panel
of a receiver even if we don't 'see' it.

A SOUNDER for amateur RADIO use? The ubiquitous BFO is what I
consider the first 'DSP' for morse cognition. That's why it
became so popular in radios way back before my time on earth.
Okay, so von Statt doesn't know much about electromagnets and
didn't put finer wire with more turns on his replica.

If we get too retro on 1890s 'aesthetics,' perhaps he could
make a lovely, shiny, brassy Tuning Fork as a frequency
standard? Musicians still use those. An HC-6 holder of a
quartz crystal can never look aesthetic by itself. But it
will be a thousand or more times more accurate in frequency
than an all-mechanical vibrating Tuning Fork. But, what the
Fork? A Tuning Fork can LOOK so interesting...and it can
make a noise! :-)

RESCUE RADIO TECHNOLOGY: VK PACKET GROUP SHUTTING DOWN

The cost of keeping a radio program going has become to much for one Australian crew. After many years of service, Australia's Queensland Digital Group is closing down and transferring its ham radio networks to that nations Wireless Institute Civil Emergency Service better known by the

acronym WICEN. With the story behind the story here's W-I-A newsman Graham

Kemp, VK4BB:

--

Brisbane Area WICEN is set to take over the Queensland Digital Group packet

and Voice networks as the QDG Inc. can no longer maintain the networks and

will run out of funds within twelve months.

In order to keep the radio sites for Amateur use QDG reluctantly decided to

close down, this way they are able to pass on the networks as a going concern, complete with some funds for maintenance and on going technical support. A number of QDG Inc. members have joined WICEN to help maintain the equipment.

This decision has taken over three years while they have tried other means

to keep the networks going but this is the only logical choice left. The QDG's VK4DGQ packet mail-server will also close, due to the decline in packet usage.

The Queensland Digital Group has started the slow process of shutting down

feeds to Queensland and interstate packet BBS. Invisible to users, VK4DGQ has none the less been an integral part of the world wide packet radio network for twenty years and will be missed by many hams.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB of the WIA News in Brisbane, Australia.

--

VK4BB also reports that as the era comes to a close, so to does the VK4TX packet radio Bulletin Board Server run by Neville Mills and bearing his callsign. First on line in 1982 the well known Australian B-B-S was soon attracting packet users in the Brisbane region and was very popular in the

1980's and 1990's. Over the last few years it has as a packet forwarding

gateway. (WIA News)

**

RESCUE RADIO TECHNOLOGY: JAPAN LAUNCHES EMERGENCY COMMUNICATIONS DATA SATELLITE

Japan has successfully orbited an experimental satellite aimed at providing high-speed emergency Internet access across Asia. This, even if

the terrestrial infrastructure were to be destroyed.

The Kizuna satellite was launched at 08:55 GMT on February 23rd from the Japan Space Center on Tanegashima island using a Japan developed H-2A rocket. The 342 million dollar bird will allow super-high speed data communications of up to 1.2 Gbps. That rate translates to 150 times that of the average high-speed ADSL connection rate of 8 Mbps, or 12 times the speed of a fiber-optic communication delivery to an Internet subscribers premises.

Japan is looking to use the satellite to allow communication when a ground-based network is severed by a disaster in any Asian country. It would be used to transmit data to crisis management offices by satellite transceiver equipped first response teams in the field. The space agency is also hoping to use the satellite as an educational or medical communications tool to reach people in remote or mountainous areas.

The word Kizuna means "bond" in Japanese. The satellite is expected to be

commissioned to full service with terrestrial infrastructures this coming

July. (Space)

ON THE AIR: CLIPPERTON 08 GOING LIVE TO THE WEB

It's a DXpedition that you will be able to take part in, at least vicariously. This with news that the upcoming TX5C DXpedition expects to

be active from Clipperton Island March 7th to March 17th has arranged to bring much of its operation into your shack over the World Wide Web.

Thanks to the generous sponsorship of satellite phone dealer Outfitter Satellite Inc, the TX5C operation will be able to provide DX'ers with rich

high bandwidth content from the DXpedition including more online log updates, webcams and live video from Clipperton Atoll.

Bob Grimmick, N6OX, will lead the international team to Clipperton. The major sponsors include Icom America, SteppIR antennas, Alpha Radio Products, the Northern California DX Foundation, and the International DX Association. Operation will be on all the high frequency bands using C-W,

SSB and RTTY plus 6 meter CW and SSB.

This happens to be the 30th anniversary of the 1978 FO0XA-XH operation from

the atoll and the goal in 2008 is to hold 100,000 or QSO's worldwide.

More is on-line at http://clipperton2008.org. We will have more DX news later on in this weeks Amateur Radio Newsline report. (Clipperton 2008)

**

DX DISASTER: BAD WEATHER FORCES XR7W EARLY SHUTDON

Being at the center of a DX pile up not only involves a lot of hard work, but it can also be dangerous and expensive. That's the story of the now

concluded Wager Island operation. Amateur Radio Newsline's Bruce Tennent,

K6PZW, has more:

--

On February 9th, the XR7W Wager Island team experienced some truly horrible

weather conditions. They were forced to leave the island after some 24 hours of gale force winds and pouring rain.

Abandoning their DXpedition was bad enough, but once on the mainland the team suffered a rather serious accident.

They were on their way back to Coyhaique, Chile when their van slipped of a

gravel road. It hit a rock and flipped upside-down. Four operators were hospitalized. RV1CC was diagnosed with a broken left upper arm. CE6TBN received cuts, bruises and a broken rib. RA0FU had a number of cuts while

HA1AG suffered a broken finger, a broken rib and compression on the thorax

bone. Thankfully none of the operators lost their life.

Despite all the problems, the XR7W operators managed some 2,400 QSO's from

the rare Wager Island location. The damage in van, to their equipment and

additional costs are estimated in excess of 11,000 Euros.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles

--

Wager Island is off the coast of Chile. You can read an in depth first hand account of the accident written by HA1AG on line at http://dx-is.com/news/?p7 (Southgate, HA1AG, others)

DX NOW: KOSOVO AND DXCC

The DXCC status of the newly independent nation of Kosovo remains in question. In a lengthy press release last week, the ARRL's DXCC Manager Bill Moore, NC1L, said he understands that there are many questions about the DXCC status of Kosovo, but indicated that a decision on adding it to the approved countries list could be sometime off .

Moore said the DXCC rules, modified in 2000 to better handle inclusion to DXCC, are clear on how additions can be made. He says that for inclusion in the DXCC List, certain conditions must be met. He says that gaining entry on the DXCC List is not contingent upon whether operation has occurred or will occur, but only upon the qualifications of the Entity"

Kosovo declared its independence from Serbia on February 17th. This set off new speculation on what this means to Amateur Radio and specifically, to the DXCC program. According to Moore, adding Kosovo to the DXCC List would be considered under the "Political Entity" DXCC guidelines. These DXCC rules state that Political Entities are those areas which are separated by reason of government or political division. When Kosovo might

be put up for such consideration, Moore did not say. We will have more DX

news near the end of this weeks newscast. (ARRL)

RESCUE RADIO: HAMS TRAIN FOR SKYWARN IN TERRE HAUTE INDIANA

Back in the USA, amateur radio operators and others in Terre Haute, Indiana

took time out on Monday night, February 25th to learn how to identify dangerous storms. This, at a class where trainee storm spotters got a lesson in spotting potentially severe weather formations.

Dave Tucek, KC9CNF, is a meteorologist with the National Weather Service in

Indianapolis. He spoke to more than 60 amateur radio operators and other weather spotters gathered for the 2008 Weather Spotter Class sponsored by Illiana Indiana Skywarn. He says that storm spotters are vital in identifying dangerous storms at the ground level. He said that weather radar often only tells the National Weather Service what is happening several thousand feet above the ground but not what's going on down here at
ground level. Weather spotters, such as those in Illiana Skywarn, are vital

for issuing correct severe weather warnings, watches and advisories, Tucek

said.

Skywarn, a national organization that works with the National Weather Service to help identify severe weather at the ground level. (Terre Haute

**

ENFORCEMENT: DEATH CANCELS PIRATE STATION FINE

The FCC has canceled a $10,000 fine against the late Henry Gaye for operating an unlicensed radio transmitter. This, because Gaye has passed on.

The text from the FCC was short and to the point. Dennis Carlton, regional

director of the South Central Region of the Enforcement Bureau, wrote: "Th
e
Tampa Office has since learned that Mr. Gaye passed away. Because Mr. Gaye

is no longer living, we cancel the NAL." (RW)

**

ENFORCEMENT: U.K. RAID NETS 20 PIRATES OFF THE AIR

Ofcom, the United Kingdoms telecommunications regulator has announced that

it recently carried out enforcement action against over 20 illegal broadcasters in various parts of London. The operation was carried out between February 6th and 16th in cooperation with the Boroughs of Hackney,

Haringey, Tower Hamlets and Islington, and the Metropolitan Police.. This

enforcement action resulted in three arrests, one studio raid, and the removal of 22 transmitters from the airwaves. Ofcom estimates that there are still over 150 illegal stations operating in the UK, with half of those

broadcasting across London and the South East. (GB2RS)

**

RADIO LAW: FOR THE BIRDS

FCC Commissioner Michael Copps says that he is pleased with a decision by a

federal appeals court to vacate the commission's denial and dismissal of

the Gulf Coast migratory bird petition. Instead, the court ordered the commission to conduct a study of the effect of communications towers on migratory birds.

The commission has an open proceeding on the issue of whether communications towers, such as radio, TV, cell and two-way towers, cause or

contribute to migratory bird deaths. Environmentalists say they do; broadcasters say they do not or that the problem is overstated.

The FCC has not decided whether to appeal the decision but Copps called the

decision a wake-up cal. He ays that it is time to stop acting as if a problem will go away if we just keep kicking it down the road. (RW)

**

REPEATER PROBLEMS: UK D-STAR REPEATER GOES OFF DUE TO INTERFERENCE FROM UNLICENSED DEVICES

A newly operational D-Star repeater in the United Kingdom has been forced off the air due to interference on its input from unlicensed devices. The

Radio Society of Great Britain's Emerging Technology Co-ordination Committee website reports that the GB7YD dash C, 70cm D-Star system has been removed from service until an alternative frequency can be found.

According to the coordinating committee, problems have been experienced at

other United Kingdom 70 cm D-Star repeaters with an input on 433.9125 MHz. Unfortunately this part of the Amateur Band in the U-K was made license exempt and is used by a large number of micro power consumer electronic devices for remote control and telemetry applications. This includes automobile key keyless entry systems, wireless door bells and data

links for in-home weather stations. (Southgate)

**

HAM TECHNOLOGY: D-STAR GROWING IN THE UK

But its not all bad news from our neighbors across the Atlantic pond. 2 meter D-Star repeaters have been springing up like weeds across the United

Kingdom in recent days. First was GB7DG in Glasgow on February 15th. It was soon followed on the air by GB7YD in Yorkshire, GM7MI in Manchester and

GB7DE in Fife.

United Kingdom D-Star repeaters have already become well established in the

70 cm band. The new 2 meter repeaters make D-Star accessible to many more U-K Radio Amateurs. The offer by Icom UK of 2 meter or 70 cm D-STAR

repeaters for ï¿½1000 which is equivalent to about 1900 U-S dollars has undoubtedly been a factor in the rapid growth of the United Kingdom's D-Star repeater network. So even with the interference from unlicensed devices, D-Star in the United Kingdom is still quickly gaining in popularity. (Southgate)

**

HAM HELP WANTED: PSR LOOKING FOR WRITERS AND ARTICLES

The Tucson Amateur Packet Radio publication Packet Status Register is looking for a few good writers. Of particular interest are ham radio operators working on the digital side of our hobby who would like to publicize their activities.

Since 1982 Tucson Amateur Packet Radio publishes the Packet Status Register

quarterly as a membership journal featuring both technical and non-technical articles. Its editorial staff can handle just about any text and graphic format. The deadline for the next issue to be released at

the 2008 Dayton Hamvention is March 31st. Submissions go to WA1LOU at tapr

dot org. (TAPR)

**

HAM RADIO BUSINESS: HARBACH PURCHASES RIGHTS TO PETER W DAHL TRANSFORMERS

The name Peter W. Dahl and the transformers and chokes he designed will live on. This with word that Jeff Weinberg, W8CQ of Harbach Electronics, has purchased the rights to the name, along with the original transformer and choke specifications and designs, and the design equipment.

Weinberg e-mailed at least one ham to confirm that the deal had been made. In his note he indicated that the next generation of Dahl designed

transformers will be built by MagCap Engineering using the original specifications, and sold through Harbach Electronics under the Peter Dahl name. The transformer and chokes will be shipped FOB Canton, Massachusetts

and shipped directly to the customer from the MagCap Engineering factory. (QRZ.com)

CHANGING OF THE GUARD: BOB BEASLEY, K6BJH - S.K.

Some more sad news to report . This, with the passing of famed ham radio cartoonist Bob Beasley, K6BJH, of Homeland, California.

Bob Beasley was born and raised in southern California and became a radio amateur in 1953. He once said that he had been interested in comic art ever since he could remember, and decided at an early age that he wanted to

be a cartoonist.

For many years K6BJH was the resident cartoonist for Worldradio Magazine. After he retired much of his work was released in the book The Best of Beasley.

Bob Beasley, K6BJH, died on Saturday, February 16th. He was 83. (Worldradio)

**

CHANGING OF THE GUARD: SWL LEADER DON RICHARD SCHMIDT - SK

And the world of shortwave listening has lost one of its prominent leaders. This with the passing of Southern California Area DX'ers club Vice President Don Richard Schmidt.

According to Stewart MacKenzie, Schmidt died of an apparent heart Attack on

Monday, February 18th. McKenzie says that the group will greatly miss Schmidt's services to the hobby of radio listening and to the two club's that he has put his full energy into all these years.

MacKenzie says that per Schmidt's wishes there are no plans for a memorial

gathering. (SCADS)

**

EMERGING TECHNOLOGY: BOEING MUST PROVE WIRELESS BROADBAND SECURITY OF 787

Boeing Aircraft Company still has something to prove when it comes to offering safe Internet access on its new 787 jetliner. This, before the

new jet will be permitted to carry passengers with their wireless devices

turned on.

Boeing has designed the 787 Dreamliner to allow airlines to offer passengers more in-flight Internet options than previous planes have allowed. Those new features and other aspects of 787's computer network go

beyond the scope of existing regulations. So the Federal Aviation Administration is requiring Boeing to show the new technology isn't a safety threat.

According to news reports, Boeing will have to show that Internet access in

the cabin will not leave the flight controls vulnerable to hackers and hijackers. The company claims it has engineered safeguards to shut out unauthorized users, but some security analysts worry navigation and communications systems could still be vulnerable.

As to you bringing along your H-T and operating from on-high. Well don't hold your breath. Its doubtful that any major airline will ever permit hams to talk on the air with their own gear as some might please. (Science OnLine)

**

HAM RADIO IN SPACE: AO-11 COPIED BUT INTERMITTANT

AMSAT reports that its aging OSCAR-11 ham radio satellite was heard from January 22nd to February 1st and again from February 11th to the 15th. Signal levels have been very variable in strength sometimes very strong, and at other time undetectable, even at high elevations. Low signal strength was particularly noticeable towards the end of the transmission periods.

OSCAR-11 is expected to switch back on under control of its on-board timer

around March 7th. There should be a short period of transmissions before permanent eclipses start in mid March. After that time it is unlikely that

the satellite will support any sustained period of operation, and will only

transmit for a short time, possibly less than a single orbit, every 21 days.

OSCAR-11 has a beacon frequency of 145.826 MHz where it transmits telemetry. More information is at http://www.users.zetnet.co.uk/clivew/ (ANS)

**

WORLDBEAT - ANTARCTICA: LOGS FINALLY ARRIVE

Some good news for those of you waiting a long time for a confirmation from

Antarctica. Adam Brown, K2ARB, reports that he has received the logs for the operation from KC4USV at McMurdo Station for the period October 2004 through February 2007. Among the operators during that period were Mike Poole, KE6ZYK, and Charles Dowdell, N2TYQ. All stations wishing to confirm

a QSO or submit an SWL signal report are invited to do so via K1IED at his address as found on QRZ.com. All QSO's will soon be uploaded to Logbook to the World as well. (Modern DX News)

**

WORLDBEAT - AUSTRALIA: A NEW HAM ON-LINE WIKI

A new amateur radio wiki has been started by Tim Roberts, VK4YEH. Roberts

says that he intends for this new wiki to become an online encyclopaedia for hams, rather than just pages of links. Articles of all sorts are welcome, but be aware that the philosophy of a wiki is that articles can be, and probably will be, edited by others. The URL is www.amateur-radio-wiki.net (WIA)

**

WORLDBEAT - WORLDWIDE: INTERNATIONAL MUSEUMS WEEKEND

This years International Museums Weekend special event will take place on the weekend of June 14th and 15th. Hams world-wide are encouraged to participate in this event by setting up stations in their local museums.

The event organizer is Harry Bloomfield, M1BYT. He asks that all those intending to join in should register their museum on the International Museums Weekend website at www.ukradioamateur.co.uk/imw Harry himself can

be contacted by email to harry dot m1byt at tiscali do co dot uk. (GB2RS)

**

DX

In DX, word that F8CHM will be active as FR5EZ from Reunion Island until the 21st of March. He expects to be active on the HF bands and 6 meters using CW and SSB. QSL as directed on the air

And weather permitting, the United Kingdom's Luton VHF Group plan to activate the Welsh island of Caldey, on 1st and 2nd March. This, during the 2 meter and 70cm RSGB contest. The callsign will be GW3SVJ. The expedition is a precursor to a much longer and larger expedition planned for the first week of September. Further information is available at www dot vhfcomm dot co dot uk slash LVG.

Also the 1st and 2nd of March sees the ARRL DX SSB Contest on all HF bands.

It starts at 00.01 on the Saturday and ends at 23.59 on the Sunday. The exchange is RST and serial number. As this is a contest contacts must be kept brief so please do not ask QSL routing. Most major operations will

either post this information on the Internet or supply it to DX and contest

newsletter.

The VP6DX operation was slated to leave the island on February 28th. As this was being written, the VP6DX Web site was reporting around 121,968 QSO's. The U-R-L is www.vp6dx.com

Lastly, word that the New Zealand's NZART QSL Bureau ZL1 prefix sub-bureau

is closed until further notice. Jack Small, ZL1KQ, has retired from the position he has held since 1980. The national society is now looking for

a replacement for Small willing to take on this unpaid volunteer position.

(Above from various DX news sources)

**

THAT FINAL ITEM: UK MAN STEALS TO BUY RADIOS

And finally this week, talk about being addicted to radio. Amateur Radio Newsline's Jim Damron, N8TMW, reports:

--

The Halifax Evening Courier reports that a 56-year-old man in the United Kingdom admitted to stealing the equivalent of almost $30,000 from his 71 year old partner and spending it all on receivers.

The newspaper says that the Copley, Halifax man was accused of forging his

partners signature on checks made out to himself while she was a resident in a nursing home. He reportedly used the money to purchase radios with which he surrounded himself often had them all on at once.

Police found about 50 wireless sets in his house. The defense said he had suffered from an obsessive compulsive disorder for 30 years.

--

The next time your XYL gives you a bad time over your transceiver and antenna tuner, just tell her about this guy and how lucky she really is. (Halifax EC)

It is not as simple as that. What constitutes an emergency? If an ambulance crew is transporting a 90 year old heart attack victim, it is certainly a matter of life or death for that one patient. However, if the ambulance breaks down, they can't commandeer your car. For a government agency to seize private property (a category that includes repeaters, transceivers, etc.) for their own use, they must have a declaration of emergency, declaration of martial law, or, in individual cases, a court order. The fire department employee who claimed that the FD could take over an amateur radio club's repeaters anytime that they wanted to do so was dead wrong.

It is an aesthetic. The Steampunk aesthetic is coupling the throwaway ideals of modern times, with the hand crafted "preciousness" of another time. It is quite purposeful anachronism, and a large part of its charm is that it isn't nihilistic, but it has a whimsical base to it. The projects they work on are specifically on new or present technology. Modifying Ipods, LCD panels, Fender Strats. It isn't even nostalgic, much of the banter appears tongue in cheek.

I do not know the exact mass of the the sounder arm, but the device does not have to sound out at the RSS feed speed if it is too fast for the mechanics. The software driving it can send out the Morse at a comfortable speed.

It is an aesthetic that is difficult for some to grasp, for sure, but
the brass is a big part of it. If future polishing is to be delayed,
there are coatings that can be added. Sometimes the weatherd look is
even desired in itself.

>> Certainly some will find this odd, but I like a little aesthetics in my

<snip>

Sure, that is very nice. But it is also a style of the moment. 50 years
from now it will be old stuff, just as the Victorian aesthetic is for us
now.

> A SOUNDER for amateur RADIO use? The ubiquitous BFO is what I

I don't recall a sounder for amateur radio use. The whole project was
just a fun thing to do with an rss feed, not a vindication of something.
Strictly speaking, it wasn't Victorian technology, it was from an even
earlier time. The guy was just having a little retro fun.

> If we get too retro on 1890s 'aesthetics,' perhaps he could
> make a lovely, shiny, brassy Tuning Fork as a frequency

> Fork? A Tuning Fork can LOOK so interesting...and it can
> make a noise! :-)

The tuning fork was invented in 1711. They are usually made of steel. Most steampunks would not make a tuning fork. The idea is to take some modern technology and make it look as if it was manufactured in another time and place. So while a person might take an Ipod and etch an old fashioned picture in it, or a guitar and modify it, they wouldn't likely make an instrument like a tuning fork.

But to return to topic, The concept of making a station conform to an aesthetic is not all that unusual. Our stations can be an expression of ourselves, and we can either place the items on the desk and be done with it, or we can embellish the room as we see fit. It is just another way to have some fun.

Well said, Mike!

I'm a member of the function-determines-form school of thought on this. That sounder is an excellent example of that school - its form is exactly what it needs to be to do the job it was intended to do. Yet it is aesthetically pleasing without any added ornamentation.

I've tried to follow that aesthetic in my amateur radio activities. My homebrew rig (google my call for the website) is built almost entirely out of reused parts. Rather than trying to hide this, I decided to celebrate it in the design. The shack furniture, while made mostly from new wood, is designed to be as strong and functional as possible while being constructed using simple woodworking tools and keeping the cost as low as possible. The result is a shack that is comfortable and functional, yet inexpensive and flexible for changes. When I worked the CW SS this year, I was able to incorporate a logging computer setup (homebrew-from-reused-components computer, too) in a short time, because of the flexibility of the shelving system.

--

Part of the attraction to some of the products of certain eras is that they were made of quality materials, and were intended to last a very long time. I've tried to follow that rule in my homebrew designs as well, and the result has been a very low parts failure rate. (I also have a large stock of spare parts so that if something does fail, it can be easily and quickly replaced).

--

Perhaps we hams are missing out on something by using words like "shack", "shop", and "hobby". People who do art for its own sake, without pecuniary interest, do not use those terms. Be it painting in oil or watercolor, sculpture (in a variety of media), woodworking, music, poetry, performing arts, etc., they use terms like "studio", "gallery", "performance space", etc. There's a certain approach the creative and performing artist have towards what they do, and I think we could learn from it. We should not be apologetic for our activities any more than an artist apologizes for his/hers. In amateur radio we

can be both creative (building equipment and stations) and performing (operating our stations) artists!

There's also the factor of craftsmanship, which is evident in the steampunk objects. Craftsmanship can't be bought or learned entirely from a book; it's a matter of practice, too. Steampunk clearly has lots of it!

I think we hams may have been selling ourselves short in some ways. We have aesthetics that IMHO are just as valid as any other. For example, antennas are not "ugly" in that aesthetic - they are a beautiful expression of form-following-function if done right. To me, a house does not become "home" unless there is a properly-designed-and-installed amateur radio antenna present.

"Imminent danger of loss of life, serious injury, or damage/loss of
property". Or verbiage something like that.

> If an
> ambulance crew is transporting a 90 year old heart attack victim, it is
> certainly a matter of life or death for that one patient.

Agreed. But what if they are transporting several people - say, a
young family that was in a serious auto accident? Or suppose they were
transporting desperately-needed medicines, blood, etc., during an
epidemic?

> However, if
> the ambulance breaks down, they can't commandeer your car. For a

> cases, a court order.

I'm not sure what the ultimate legality is, in a case like that or the
others I described. I suspect that government folks would not seize
private property for emergency use unless they were desperate, because
of the possible liability.

OTOH, would you want to have it on your conscience that a person or a
family died because you wouldn't let the ambulance folks use your car
when it was desperately needed?

> The fire department employee who claimed that the
> FD could take over an amateur radio club's repeaters anytime that they
> wanted to do so was dead wrong.

I don't think the FD person wanted the repeaters. He said they could
use the frequencies, not the repeaters. And the frequencies are public
property, after all. An amateur or club might own the repeater but
they don't own the frequencies.

Further complicating the situation is the fact that many if not most amateur radio repeaters aren't installed on the owner's property. For example, one of the repeaters I use is on top of a local hospital, where its antenna shares rooftop space with antennas for other radio services. (It's an excellent location and gives very good coverage). It's connected to the hospital's backup power system, too. The repeater club pays a nominal fee for the electric power and rent. Given that level of community support, don't the repeater owners have some responsibility to the community?

Like the situation of the broken-down ambulance, would any radio amateur want it on his/her conscience that a building burned down, and/or people died, because s/he wouldn't let the emergency service people use an amateur radio repeater in an emergency when it was desperately needed?

Well actually AF6AY, and Mike are reading more into those passages of
Title 47 than they were, and are, intended, by the Commission. Phil,
being an ex FCC Lawyer can expound on the intent, but when I was a
Resident Field Agent, it was understood within the Commission, that
Amateurs, operating within their Licenses, are NOT restricted to

Frequencies, modes, or just about any other restriction, of operation, during Safety of Life situations, that are authorized by the PART 97, but this does NOT Allow them to use Frequencies NOT Authorized under than Part.
The same is true for Licensees operating under other Parts like 90, 87, and 80, where that Specific Language is used in the Part. The fact of the matter is, that you only get in trouble, IF someone complains, or has a problem with your operation, and is willing to go on the Record with their objection with your operation, and Force an investigation, of the incident. Sometimes Common Sense does prevail, but sometimes it turns into a very BIG Deal.
Case in Point, a few years back, there was an incident in California, where a young fellow used his Mod'ed HT to beak into the Local Sheriff's Frequency to report an injured Hiker. The Sheriff took offense to that intrusion, and there was a GIANT BrewHAHA, that as I recall, Phil was involved in. We had quite a discussion about the situation, between ourselves about the incident, and again, as I recall the issue was settled out of HQ by some of the BIG GUN Lawyers back there.

It has to be life and death, and keep in mind that Law enforcement is
happy to make that determination after the fact - and has in some cases.
The thing that had people concerned in this case was the "anything" message.

<some snippage>

> Radio amateur licensees are not bound JUST to what Part 97

> are there primarily for the benefit of other amateurs.

One of the issues that has come up in the post Katrina world is that a
number of public service agencies have had their employees get Ham radio
licenses. All well and good, and probably an end run around getting
hobbyists to help, since the employee hams will already be on the job.

Problem is, the new hams in many cases are just looking for another
communication channel, and are not interested in radio as radio. Even
this is okay. But.. The problem that arises is that there is an
expectation the people who are interested in the hobby and its technical
issues are going to keep everything up and running.

Even then, many of us with that ability are willing to pitch in.

But the big question is who becomes liable if that repeater fails? I
think that in many ways, Ham radio emergency operations are tending to
become employees who also have a ham license. And their interests are
more in the line of what they do best - save lives, not put up repeaters.

I think there's a significant difference between a one-time emergency use (if regular comms go down), and regular use of the frequencies as a substitute for a properly-licensed/managed public service radio allocation.

As I understand it, this issue came up in a big way some decades ago, after World War II. During the war, normal amateur-radio communications were all shut down (for security reasons). The whole RACES system was set up to allow specially-licensed stations (part of civil-defense organizations) to use the ham-radio frequencies for communication.

Some years after that (after ham-radio communications were allowed again) some controversy arose over the use of the ham frequencies. >From what I've heard, there were some public-safety organizations in small towns (police and fire) which started using the ham frequencies regularly... they got ham licenses and set themselves up as RACES stations and tried to justify their full-time tactical use of the ham band under the "RACES training and drill" rules.

Hams complained. The FCC agreed with the complaints, deciding that this was not an appropriate use of the ham frequencies, and instituted new rules which strictly limit the frequency and duration of RACES training drills that any given RACES organization can undertake (basically, the equivalent of two long weekends per year). These rules still exist today, and I imagine that many of us here had to answer at least one question about this on one of our ham exams :-)

The Rules in 47 CFR 97.113 specifically forbid "Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services" as well as communications for hire or in which the operator has a pecuniary interest. I think that the first of these prohibitions would probably be ruled to apply to a fire department which (as a matter of course or regular practice) makes use of the ham band or repeaters. The FCC would (I believe) certainly rule that there are other bands and radio services which are specifically intended for public-safety use, and that these are reasonably available to fire departments and etc.

Real, short-term emergency use, when a regular fire-department or
other radio service fails for some reason, is a different matter...
but this isn't a "regular basis" of communications.

Agreed. The discussion in question was about use of amateur
frequencies in an emergency situation only.

> As I understand it, this issue came up in a big way some decades

During WW2, the system was called WERS (Wartime Emergency Radio
Service). WERS used the prewar
112 and 224 MHz bands (2-1/2 and 1-1/4 meters) for local
communications. Post-war, WERS evolved into RACES.

> Some years after that (after ham-radio communications were allowed

Sounds plausible. The difference in cost of amateur gear (which could
be converted surplus or even homebrew) vs. commercial land-mobile VHF
equipment was probably one reason for it.

> Hams complained. The FCC agreed with the complaints, deciding that

And the need for a declared emergency to activate RACES.

Good points!

There are fringe elements in all aspects of life, including ham radio. I've seen hams get much too caught up in the particular aspect of the hobby that they enjoy, be it emergency communications, DX, contesting, whatever.

Someone went to a club meeting and got carried away with what he was saying about emergency communications. This has evolved into a discussion about what constitutes an emergency, what hams can do during this emergency, and the possible ramifications of all that. It has been an interesting discussion, from which I have learned something.

But let's not assume that the statements of one individual represent the guiding principles of an entire segment of ham radio. Yes, there is a fringe element in the emergency communications interest group, but the same is true for the contest interest group, the DX interest group, and even the segment of the hobby who only wants to ragchew. You're not going to find a mainstream emcomm guy who will say "everything we do is a matter of life and death."

While this has been an interesting discussion, we need to realize that it applies to a minuscule part of our operating. If there are a thousand people reading this newsgroup, it's likely that not a single one of you will ever be involved with a real life-or-death emergency. If you are, Part 97 is likely to be the last thing on your mind, which is exactly as it should be.

Still, an interesting discussion. I hope I never have to administer CPR, but I still got the training.

If you want to COMMANDEER something, re-read my previous post. It
doesn't matter if there are 99 people in the ambulance, they are all
having heart attacks and the ambulance is on fire.

Look for definitions of terms like "declaration of emergency,"
"martial law" or "disaster area." This is heavily traveled territory -
we don't need to reinvent the wheel, here in this newsgroup.

> OTOH, would you want to have it on your conscience that a person or a

There is a bit of difference between a civic minded amateur radio
club voluntarily making its facilities available and a government
employee with an inflated sense of entitlement believing that he can
seize whatever he wants to seize whenever he want to seize it because
fires and sick people in ambulances are really, really important.

You're just several pieces of brass and leather away from steampunkin'
it, Jim! The knobs and meters are already there. maybe brass up the
chassis (technical question: will the brass have an untoward effect on
inductors, ala diddle sticks?)

The speaker (red cone is a plus) can be covered with leather real
or faux. The shelves look a lot like the ones I made. Tubes glow, so they

are already there......

> they were made of quality materials, and were intended to last a very
> long time.

<snip>

> Perhaps we hams are missing out on something by using words like
> "shack", "shop", and "hobby". People who do art for its own sake,
> without pecuniary interest, do not use those terms. Be it painting in
> oil or watercolor, sculpture (in a variety of media), woodworking,
> music, poetry, performing arts, etc., they use terms like "studio",
> "gallery", "performance space", etc. There's a certain approach the
> creative and performing artist have towards what they do, and I think w
e
> could learn from it. We should not be apologetic for our activities any
> more than an artist apologizes for his/hers. In amateur radio we can be
> both creative (building equipment and stations) and performing
> (operating our stations) artists!

Interesting insight Jim. When I built my telescopes, each one was
designed to be functional, yet beautiful. I was especially fond of the
12.5 inch reflector, which was done in art deco style. The form followed
the function, yet the aesthetic enhanced the form. On the urging of some
friends I entered it in the home made telescope contest, and it won.

> There's also the factor of craftsmanship, which is evident in the
> steampunk objects. Craftsmanship can't be bought or learned entirely
> from a book; it's a matter of practice, too. Steampunk clearly has lots
> of it!

They love to create. I'm hoping to bring some of that to amateur
radio. I also expect a certain amount of ridicule.

> I think we hams may have been selling ourselves short in some ways. We
> have aesthetics that IMHO are just as valid as any other. For example,
> antennas are not "ugly" in that aesthetic - they are a beautiful
> expression of form-following-function if done right. To me, a house doe
s
> not become "home" unless there is a properly-designed-and- installed
> amateur radio antenna present.

I think that many people have been told that antennas are ugly,
and that some industries are happy to promote that. Most antennas are not

ugly

==> ARRL, FCC, DEPARTMENT OF DEFENSE REVIEW NEW DEVELOPMENTS IN PAVE PAWS INTERFERENCE
MITIGATION

The FCC, ARRL representatives and agents of the various US Air Force units
working on developing a plan to mitigate alleged interference from 70 cm ham
radio repeaters to PAVE PAWS radar systems on both coasts met February 20 via
conference call. The purpose of the conference was to review the status of
the mitigation plans at both sites: the Massachusetts Military Reservation on
Cape Cod and Beale AFB, north of Sacramento, California.
```

Thanks to the cooperation and assistance of the involved repeater owners on Cape Cod, ARRL Regulatory Branch Manager Dan Henderson, N1ND, said, "I am pleased to be able to pass along that at this time, the Department of Defense has determined that the levels of harmful interference to the PAVE PAWS radar site on Cape Cod have been sufficiently reduced. As part of this determination, they are not rescheduling additional follow-up testing for that area until sometime in 2009."

Henderson said that this decision doesn't mean New England is back to pre-mitigation repeater operation: "Any mitigation steps that have been taken should remain in place. A repeater that has gone off the air should not be simply turned back on at its original power level -- its previously determined mitigation standard still applies in order to protect the primary user from harmful interference."

Henderson stressed that the entire process is ongoing. "The high degree of voluntary cooperation shown by the owners of Air Force-identified repeaters has helped demonstrate to the DoD that the amateur community takes its responsibility seriously. This should help us retain access to the band in the long run."

During the discussion of the Cape Cod radar during the teleconference, the ARRL broached the topic of allowing the resumption of coordinating new repeaters on the 70 cm band in New England. The Air Force has agreed in principle to allow the New England Spectrum Management Council (NESMC) to resume coordination efforts under certain conditions. "These include that in addition to NESMC's normal coordination policies, Longley-Rice signal strength plots are prepared to determine expected signal strength at the radar site," Henderson said.

Henderson said that the ARRL has a "fairly good understanding of what strength level at the site should be workable, even though the DoD has not given us specific information on the sensitivity of the radar. The Longley-Rice plots should indicate if the operating parameters of the proposed repeater might be sufficient to prevent harmful interference to the radar site. The Longley-Rice plots are not the 'last word' in the process, but are a good tool giving the repeater owner and NESMC a reasonable assessment of possible problems."

Henderson reiterated that "any specific mitigation number from the Air Force is an exact measurement, not a 'predicted' number from a computer analysis."

Once NESMC approves a tentative coordination, Henderson explained that NESMC would forward the complete information on the new repeater to the Air Force for authorization on a case-by-case basis, as provided for in Title 47 ï¿½2.106 Footnote US7. "During a 60 day trial period, the Air Force would contact NESMC for an immediate shut-down of a new repeater causing harmful interference. If that happens the new repeater would have to remain off the air until it can be successfully mitigated."

While this new process is a bit burdensome to NESMC and the repeater owners, it goes a long way toward keeping Amateur Radio in a position where 70 cm operation can grow with careful attention to the effect of our operations on

the primary users.

During the update discussion of the Beale AFB PAVE PAWS site in California, the DoD was able to report that there was a reduction in harmful interference at the radar, though work remains to be done to bring the situation at that site to a successful conclusion. DoD officials announced that a new round of testing is scheduled during the spring at Beale, and that they will share the results after the next round of testing is complete.

During the teleconference, the FCC reported that it has received excellent compliance in the wake of their phone calls and letters to repeater trustees and owners. This cooperation has made it unnecessary for the FCC to issue any mandatory shut down orders to date. The Commission will continue to be the initial point of contact with the DoD should further mitigation be required based on additional testing at Beale.

The ARRL will continue to work with the FCC, DoD, repeater coordinating groups and individual repeater owners as requested. "Because of the sheer number of 70 cm repeaters in that area, the Beale problem is taking longer to resolve," Henderson said. "We will continue to work toward a successful, constructive conclusion for as long as it takes."

==> TENNESSEE AGENCY CALLS ARMY MARS INTO ACTION

The Tennessee Emergency Management Agency (TEMA) called Army Military Affiliate Radio System (MARS) into action as tornados swept across the Southeastern United States February 5-6. According to Army MARS Chief Stuart Carter, "For the first time as far back as we can remember, a state government called for MARS deployment in response to an actual emergency. The resulting teamwork and use of Army MARS Winlink capability gave TEMA its only e-mail link during President Bush's visit to the storm-stricken area." At least 70 messages were sent during the state operation ranging from casualty figure updates and signal reports to staff rosters and photos.

TEMA's Chief of Communications David Wolfe, WA4VVX (MARS call sign AAR4CY), said, "Although there was no commercial power at the deployment site, TEMA's communications infrastructure was fully operational. Both the VHF high band and 800 MHz repeater systems had good coverage for voice command and control. Our shortage was Internet connectivity, and our unmet needs were e-mail and the ability to send pictures. MARS Winlink provided exactly what was not available by any other means."

Carter said that this event illustrates the importance of detailed preparation and training that has taken place during realistic disaster response exercises over the past several years. "In the case of Tennessee, the story goes back a year and a half. Steve Waterman, K4CJX (MARS call sign AAA9AC) began working with Wolfe in late 2006, preparing for just such a deployment. At the time, Army MARS was just beginning to adopt the Winlink 2000 radio e-mail network system, and with the assistance of the then-Tennessee State Director Paul Drothler, WO4U (MARS call sign AAV4DJ), Army MARS had just signed a Memorandum of Understanding with TEMA. This MOU just served to strengthen an already strong relationship between TEMA and

Army MARS. Wolfe led TEMA staffers who were already hams to becoming MARS members and to become qualified MARS Winlink 2000 operators. The rest of Wolfe's team soon obtained their Amateur Radio and Army MARS licenses."

The next step, according to Carter, was joint training for TEMA staff and Tennessee Army MARS members. Some was classroom training followed up with extensive field training. The culmination of the field training was TNCAT07, a massive exercise that included the Central United States Earthquake Consortium (CUSEC), an eight-state alert consortium along the New Madrid fault line. This exercise also included the participation by ARRL Amateur Emergency Radio Service (ARES), Civil Air Patrol and other EmComm services that clearly demonstrated interoperability between TEMA, Tennessee Army MARS, the Amateur Radio community and other municipal communications services.

"To make a long story short," Carter said, "we now have seen a demonstration of seamless collaboration between Army MARS and one of our supported agencies under 'Real World' emergency conditions. This was the first Army MARS deployment since the Katrina/Rita disasters two years ago. Successfully meeting the challenge involved deployment readiness on the part of our members, and it required total Winlink 2000 mobility. First of all came the building of relationships with existing and potential customers, and then came meticulous training of state and federal staffers, and frequent exercising at home and in the field. With this pattern of established collaboration between our customers and MARS members, we enter the new era of Army MARS Emergency communications support."

==> DUCIE ISLAND, VP6DX: MAKING CONTACTS, BREAKING RECORDS

After 13 days, 7 hours and 37 minutes of continuous operation, the VP6DX Team on Ducie Island <http://ducie2008.dl1mgb.com/index.php> made their 168,723rd contact. Valeri Koursov, RA0ALM, of Krasnoyarsk, Russia, contacted the Ducie Island expedition on Monday, February 25, 2008 at 0437 UTC on 30 meters. According to documents maintained by Jari Jussila, OH2BU, this contact breaks the record for the largest number of contacts made by any radio expedition. The previous record was held since February 8-28, 2001 by the Five Star DX Association's DXpedition to the Comoros Island, D68C.

The Ducie Island DXpedition has broken other expedition records throughout the course of the DXpedition, including:
* The largest number of RTTY contacts, previously held by the Swains Island N8S DXpedition in April 2007.
* The largest number of SSB (voice) contacts, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts on 40 meters, previously held by the Libya 5A7A DXpedition in November 2006.
* The largest number of contacts on 30 meters, previously held by the St Brandon Island 3B7C DXpedition in September 2007.
* The largest number of contacts on 17 meters, previously held by the Swains Island N8S DXpedition.
* The largest number of contacts with North America, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts with South America, previously held by the

Peter I Island 3Y0X DXpedition in February 2006.
* The largest number of contacts with Africa, previously held by the Rodrigues Island 3B9C DXpedition in March-April 2004.

The Ducie Island crew received inquiries about the equipment and antennas used on Ducie Island. They reported that each operating position used:
* Elecraft K3 radio. They said "The outstanding receiver and transmitter characteristics allowed us to run two positions simultaneously on any band -- even the very narrow 30 meter band -- with absolutely no interference. Good design makes the complex appear simple: the ins and outs of this sophisticated radio were quickly mastered by the operator team, none of whom had seen a K3 before the expedition."
* Microham microKeyer II computer interfaces: plug in, turn on, call CQ and get to work.
* Acom 2000, 1000 or 1010 amplifiers: quietly getting the job done without trouble. The position used on 160 meters includes an OM 2500 HF amplifier.
* 200 W W3NQN bandpass filters from Array Solutions and 2 kW bandpass filters from 4O3A.
* WinTest logging software running on Durabook ruggedized laptops.
* Honda EM65is and EM30is inverter supply, gasoline generators. The operators report that the generators offer "100 percent reliability to date. The inverter system has been very tolerant of the widely varying loads presented to the generators as multiple operating positions switch between transmit (high power consumption) and receive (low power consumption), a vast improvement over previous gasoline generator designs."

The seven operating positions were divided into two sites: East (four positions) and West (three positions). The operating sites stood about 1 kilometer apart, a 15 minute walk over a coral shelf bordering the island's inner lagoon. Each site had its own WiFi network; a microwave link tied the two sites together. Sleeping tents and meals were located at the East camp.

The Ducie Island DXpedition closed down operations on Wednesday, February 27. Amateurs who had QSOs with VP6DX can check the online logs <http://ducie2008.dl1mgb.com/onlinelog/index.php>. -- Information provided by VP6DX Team

==> TWO NEW TITLES JOIN THE ARRL BOOKSHELF

The ARRL is pleased to announce two new books as part of the spring publications line-up: "ARRL's VHF Digital Handbook" and "ARRL's Hands-On Radio Experiments." These books complete the spring suite that includes the 2008-2009 "ARRL Repeater Directory" and "TravelPlus for Repeaters" CD-ROM, both to be released in April.

"ARRL's VHF Digital Handbook," written by QST Editor Steve Ford, WB8IMY, looks at how today's Amateur Radio operators are using digital radio applications for fun, technical achievement and public service. And it's no wonder -- getting started often requires little more than a VHF radio and a computer. This new book includes such topics as packet radio, APRS, D-STAR, digital applications in public service and emergency communications and much more.

Without complicated "owner's manual" jargon, "ARRL's VHF Digital Handbook" presents the material through a unique how-to approach and friendly, conversational style. Readers will understand how to setup and operate their equipment and software and make the best use of their VHF digital station.

"ARRL's Hands-On Radio Experiments," written by H. Ward Silver, N0AX, is a compilation of the author's "Hands-on Radio" columns that appeared in QST from 2003-2008. The experiments cover a wealth of topics designed to educate today's radio experimenters, and inspire others who want to learn what makes their radios work. Even seasoned experts will encounter new approaches to practical methods, new explanations for familiar topics and new ideas that will enhance your understanding of the radio art. Step-by-step, Silver expertly leads you through each experiment -- and you'll make discoveries along the way.

With more than 60 experiments ranging from Radio and Electronic Fundamentals to Semiconductor Basics to Transmission Lines and Impedance Matching to Power Supplies, these projects are designed to increase your understanding of basic radio fundamentals, components, circuits and design.

Order your copy of "ARRL's Hands-On Radio Experiments" and "ARRL's VHF Digital Handbook" today at the ARRL Online Store <http://www.arrl.org/catalog/>.

==> THE MARCH/APRIL ISSUE OF NCJ NOW AVAILABLE

NCJ, The National Contest Journal is what everyone interested in radiosport needs to have in their shack. Filled with the latest news from the contesting world, this is a definite must-have. Whether you are new to contesting or are a seasoned pro (or somewhere in the middle), you will find something in NCJ just for you.

In the March/April issue, David Robbins, K1TTT, ruminates on a "Real-Time Contest Scoreboard." Julius Fazekas, III, N2WN, discusses "Top Band Contesting: My 80/160 Meter Receive Antenna Evolution." Tom Menas, K3WT, remembers the "The 5J0A San Andres Island 2007 CQ WW CW Contest Operation," and Scott Robbins, W4PA, profiles Rick Lindquist, N1RL, in this issue's "NCJ Profiles." Bob Neece, K0KR, concludes his "virtual tour" of the CAC in his article, "Update: The ARRL Contest Advisory Committee -- Part 2."

If you've been waiting to see how you did in the October 2007 RTTY Sprint, you definitely don't want to miss this issue! Ed Muns, W0YK, give readers the rundown on this popular contest. Was your log one of three "Golden Logs" received? Check out your scores and see if you can beat it for the March Sprint.

A new regular column appears in this issue: "Contesting 101." Each issue, Kirk Pickering, K4RO, takes contesters, novice and expert alike, around the "nuts and bolts" of radiosport. This issue, he looks at why people get started in contesting, as well as an explanation of why people participate in contests.

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks &

Techniques," by Gary Sutcliffe, W9XT; "Propagation," by Carl Luetzelschwab, K9LA; "VHF-UHF Contesting," by Jon Jones, N0JK; "Contesting on a Budget," by Paul Schaffenberger, K5AF; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU, and "Contest Calendar," by Bruce Horn, WA7BNM.

All this and more in the March/April issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. Subscribe today <http://www.arrl.org/ncj/>!

==> FCC DENIES PETITIONS TO BRING BACK MORSE CODE TESTING

In a "Memorandum Opinion and Order" (MOO) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-08-59A1.pdf> released February 28, the FCC denied two petitions calling for General or Amateur Extra license applicants to demonstrate proficiency in Morse code. In December 2006, the FCC released a "Report and Order" (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf> in the "Morse code proceeding," WT Docket 05-235, that eliminated Morse code testing as of February 23, 2007.

The "R&O" amended Section 97.501 to remove the telegraphy requirement. In reaching this decision, the FCC noted in the R&O that "one of the fundamental purposes underlying our Part 97 rules is to accommodate amateur radio operators' ability to contribute to the advancement of the radio art, and that the Commission had previously concluded that an individual's ability to demonstrate Morse code proficiency is not necessarily indicative of his or her ability to contribute to the advancement of the radio art." The FCC also noted that another fundamental purpose underlying Part 97 rules is "to enhance the value of the amateur service to the public, particularly with respect to emergency communications, and that the Commission had previously concluded that most emergency communication today is performed using voice, data, or video modes, because information can be exchanged much faster using modes of communication other than telegraphy."

The Commission therefore concluded that requiring an individual to demonstrate Morse code proficiency as a licensing requirement "did not further the purposes of the Part 97 rules." The Commission also found that this reasoning applied equally to the General Class and the Amateur Extra Class, so "it rejected suggestions that the Morse code requirement be eliminated for the General Class license but retained for the Amateur Extra Class license."

In the wake of the FCC's actions in WT Docket 05-235, two amateurs submitted separate petitions to the FCC, asking them to bring back the testing. Anthony R. Gordon, KG6EQM, of West Covina California, objected to the FCC eliminating the telegraphy examination element as an examination requirement for the Amateur Extra Class operator license. Russell D. Ward, W4NI, of Nashville, Tennessee, requested the FCC reconsider their decision for "'strictly procedural'" reasons.

Gordon asserts that "'the failure to keep the Morse code telegraphy requirement intact, at least as a required examination element for the Amateur Extra Class operator license, fails to take into consideration the significant national security implications that require retaining adequate examination safeguards to insure the viability that Morse code telegraphy provides, not only to the Amateur service, but the nation as well.'" Gordon argues that the requirement should be retained so that amateur operators can act as "a 'strategic reserve,'" because there is "no assurance that...voice or digital modes will even be operationally viable in future emergency communication environments."

The FCC was not persuaded, however, that eliminating the Morse code examination element will affect national security or emergency communications. "We agree with the commenters who point out that requiring applicants to pass a one-time telegraphy examination did not and would not guarantee a supply of skilled telegraphy operators. Moreover, nothing in the Commission's decision prevents an interested amateur radio operator from pursuing Morse code proficiency."

The FCC reiterated their prior conclusion that "an individual's ability to demonstrate Morse code proficiency does not further the underlying purposes of the Part 97 rules, i.e., to accommodate individual contributions to the advancement of the radio art and to enhance the value of the amateur service to the public. Accordingly, we deny the petition."

In the MOO, Ward states that he "encountered difficulty" in submitting his comments and reply comments to the NPRM electronically and that his filings were not posted on the ECFS (the Commission's electronic filing system) until after the deadlines had passed. He asserts that "there is no certainty that the Commission considered his comments and reply comments, that the late posting of his comments prevented others from replying to them, and that it is 'quite likely that other comments were treated improperly.'" As a result, Ward requested that the FCC "stay the proceeding, reopen the record and reconsider the NPRM after the close of the extended comment period."

The FCC claims that all comments in the ECFS "were considered before the Commission adopted the Report and Order, regardless of the how or when they were filed. Moreover, many of the 3900 comments and reply comments expressed the same view as Mr. Ward, so the substance of his views unquestionably was replied to and considered. Finally, he provides no evidence that ECFS mishandled other comments. No other party has complained that his or her comments were not received. We conclude, therefore, that reopening the proceeding for additional comments is not justified, and we deny the petition."

In summary, the FCC said neither petition asserted "any grounds for reconsidering" the decision in the Report and Order. "We believe that the actions taken therein will allow amateur service licensees to better fulfill the purpose of the amateur service, and will enhance the usefulness of the amateur service to the public and licensees."

==>SOLAR UPDATE

Tad "They have never seen the sunshine, nor the glory" Cook, K7RA, this week reports: A sunspot emerged a few days ago, a welcome sight at Cycle minimum. Sunspot numbers for February 25-28 were 12, 13, 12 and 12, but that spot (number 983) is now gone over the eastern horizon of our Sun. If the February 29 sunspot number is zero, this means our three-month moving average of sunspot numbers centered on January will be 8.5, slightly higher than the last reading. Our moving average centered on June 2007-January 2008 is 18.7, 15.4, 10.2, 5.4, 3, 6.9, 8.1 and 8.5, with the minimum centered on October 2007. Sunspot numbers for February 21-27 were 0, 0, 0, 0, 12, 13 and 12 with a mean of 5.3. The 10.7 cm flux was 71.8, 72.4, 71.6, 70.7, 71.4, 70.7 and 70.7 with a mean of 71.3. Estimated planetary A indices were 6, 4, 4, 3, 3, 3 and 12 with a mean of 5. Estimated mid-latitude A indices were 3, 3, 3, 2, 1, 2 and 6 with a mean of 2.9. Remember that a sunspot number does not represent t
he actual number of sunspots. The minimum non-zero sunspot number is 11, because a value of 10 is counted for each cluster of sunspots; a value of one is added for each individual spot. So the February 26 sunspot number of 13 represents one group containing three sunspots. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you courtesy of Elizabeth Barrett Browning.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the ARRL International DX Contest (Phone) is March 1-2. The NCCC Sprint is February 29 and the Wake-Up! QRP Sprint is March 1. The low band portion of the Open Ukraine RTTY Championship is March 1 and 2; the high band portion is March 2. The DARC 10 Meter Digital Contest is March 2 and the RSGB 80 Meter Club Championship (Data) is March 3. The ARS Spartan Sprint and another running of the NCCC Sprint are March 4. Next weekend starts with the NCCC Sprint on March 7. The AGCW QRP Contest and SOC Marathon Sprint are March 8. The RSGB Commonwealth Contest, the Oklahoma QSO Party, the EA PSK31 Contest and the Idaho QSO Party are March 8-9. The North American Sprint (RTTY), the SKCC Weekend Sprintathon, the UBA Spring Contest (CW) and the NSARA Contest are March 9. The Wisconsin QSO Party is March 9-10 and the CLARA and Family HF Contest is March 11-12. The RSGB 80 Meter Club Championship (CW) is March 12. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March, 9, 2008, for these online course sessions beginning on Friday, March, 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive,

and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assi
gnments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL Gearing for Up Dayton Hamvention: ARRL EXPO returns to Dayton Hamvention, to be held May 16-18, 2008 at the Hara Arena in Dayton, Ohio. The huge ARRL exhibit area is a showcase of displays, activities and program representatives to enhance your ham radio experience. The ARRL EXPO is open to all Hamvention attendees. Meet ARRL President Joel Harrison, W5ZN, other ARRL officials, volunteers and staff knowledgeable on a wide variety of topics. Among the highlights of the exhibit space will be a card checking area for operating awards, activities for young hams, the ARRL bookstore and more. ARRL Membership Manager Katie Breen, W1KRB, is the ARRL EXPO coordinator. "We are looking at some new and exciting venues within EXPO, but I'm not ready to spill the beans quite yet! We are focusing our attention this year on the theme of technology and on Hamvention's theme celebrating ham radio fellowship -- stay tuned for more news. We sincerely thank the 2008 Dayton Hamvention Commi
ttee and their volunteers for all they do to make this a signature convention; we are so pleased to participate." Keep an eye on the ARRL EXPO Web site <http://www.arrl.org/expo> for updates.

* W1HQ Now Up and Running -- on the World Wide Web: ARRL Membership Manager Katie Breen, W1KRB, has started a blog <http://www.arrl.org/blog/The%20Rebirth%20of%20W1HQ> chronicling the rebirth of the ARRL employee's club station, the Laird Campbell Memorial Station, W1HQ. "I've created this blog as a method of tracking our activities at the ARRL employee's club station," Breen said. Along with Contest Branch Manager Sean Kutzko, KX9X, she has led the charge to spiff up the station by giving the room a much-needed coat of new paint. Ed Hare, W1RFI, constructed all-new desks and cabinets. Building Manager Greg Kwasowski, W1GJK, installed new carpet and ceiling tiles. Test Engineer Mike Tracy, KC1SX, and Lab Assistant Anthony Nesta, AA1RZ, ran new antenna cables to the roof and rewired the entire room with a new antenna patch panel to accommodate all the new antenna feed lines. Lab Engineer Mike Gruber, W1MG, built a trap vertical. Read along as Breen, Kutzko and the rest of the
W1HQ Crew bring W1HQ back to life and back on the air. You can also check out blogs <http://www.arrl.org/blog/> from past ARRL events, such as Dayton Hamvention and ARRL Expo, the 2007 ARRL National Convention and Field Day. DXCC Manager Bill Moore, NC1L, also keeps a blog discussing news and notes concerning the DXCC program.

* Wisconsin Hams Assist Injured Driver: On Wednesday, February 27, Brian Sprecher, KC9LCC, of Prairie Du Sac, Wisconsin, received a radio call on the

147.150 Madison repeater requesting emergency help. Robert Stout, WB9ECK, of Monticello, Wisconsin, told Sprecher that a vehicle had gone off the road through a guard rail, stopping short of a creek. The driver was injured and trapped in his vehicle and an ambulance was needed at the scene. Sprecher called the Dane County sheriff's office to relay the information. Stout, via the repeater, kept Sprecher apprised of the driver's injuries; Sprecher, in turn, updated the sheriff's dispatch with the information. Stout remained at the scene providing aid until local police arrived. Sprecher relayed all information to the dispatcher until local authorities arrived and assumed control. "It sounds like the guy drove off the road through a guard rail and may have not been found had it not been for WB9ECK. It was also unknown how long the
driver had been over the embankment before being found. This could have been a lot worse had WB9ECK not become involved," Sprecher said. -- Information provided by Brian Sprecher, KC9LCC

* Los Angeles County Hams Honored for Community Service: On February 27, members of the Disaster Communications Service (DCS), based at the Carson Sheriff Station, received individual and group awards from the State of California, the County of Los Angeles, the Carson Sheriff Station Support Foundation and the City of Carson, California for their participation in a wide range of both planned and emergent events. These 27 Amateur Radio operators provided almost 8000 hours of service to the agencies, including assisting in providing assistance during a bicycle race, tactical alerts due to civil unrest, funerals for fallen deputy sheriffs and the fires that plagued Southern California. Members of their Rapid Deployment Team spent five days on Catalina Island, serving as the primary means of communication between the island and the mainland until telephone systems were restored. The service provided by the Carson Station DCS volunteers saved the taxpayers of Los Angeles County al
most $320,000, "but more importantly, they selflessly provided an invaluable service that is a critical component to the safety of our communities and families," the DCS coordinator said. Thirteen deputies, a firefighter, two station volunteers and two citizens were also recognized in the second annual event that pays tribute to Carson sheriff's deputies and supporters for their work in the city. More information can be found at the Los Angeles County Disaster Communications Web page <http://lacdcs.com/carson-awards-endpage.html>.

* 500 kHz Distance Record Broken Again: On February 21, Neil Schwanitz, V73NS/WD8CRT, on Roi-Namur in the Marshall Islands, received a signal from experimental station WD2XSH/6. This experimental station, operated by Pat Hamel, W5THT, is located in Long Beach, Mississippi -- 6679 miles away from the island in the Kwajalein atoll. This contact breaks the previous record for the longest 500 kHz contact. That record, set in January 2008, was for a distance of 4737 miles from Cottage Grove, Oregon to Roi-Namur. An article on Hamel's station appears in the March issue of QST. The ARRL 500 kHz experimental license, WD2XSH, was issued in September 2006 and has 20 active stations. Fritz Raab, W1FR, of Vermont, serves as experimental project manager for The 500 KC Experimental Group for Amateur Radio <http://www.500kc.com>. Additional information can be found at the experiment's Web site and also in the July/August 2007 issue of QEX <http://www.arrl.org/qex/2007/07/raab.pdf>. -- Info

rmation provided by Fritz Raab, W1FR

* "Swiss Army Knife" Now Available for PIOs: The 2008 edition of the "Swiss Army Knife for PIOs" CD is now available. This "toolkit-on-a-disk" is designed to be a handy reference for Amateur Radio public relations officials. Topics on the disk include how to write press releases, give interviews and talk to groups; how to deal with legislative issues affecting Amateur Radio; audio, video and picture files; how to write articles for ARRL publications such as QST; how to connect with youth; information on ARRL public relations awards; how to promote Field Day in your community; FEMA course information, and more. To receive a copy, send a self-addressed stamped envelope (please make sure the envelope is large enough for a CD disk) with at least two units of postage and a note to Public Relations, ARRL, 225 Main St, Newington, CT 06111. This disk is available to anyone with an interest in spreading the word about Amateur Radio.

My wife has been married before, and all three of her husbands (I am
the last and longest) were hams. She never was interested in ham
radio until a while back when she expressed an interest in being able
to "slide into the seat" when I did emergency hospital communications.
As an electrical power and instrumentation engineer of some 40 years'
experience, theory was no problem for her. She started to take the
three-session class offered by our radio club, using the ARRL's video
tapes which in my view are insipid.. Halfway through the second tape
she got up and left, declaiming "what the hell am I doing here" and
strode out of the room. She never became interested again and I'm not
about to press the issue.

The moral of the story - good wishes have to be backed up by solid
support.

Gee, let's open that can of worms once again!

It's a two-prong test - it has to be a situation involving immediate safety of life or property, AND no other means of communication are available.

My job at the Commish' involved reviewing such cases before Violation Notices were sent out, and in the vast majority of cases, both prongs were not met. In fact, in one notable case, the radio tech of the law enforcement agency upon whose frequency the "wanna-be" came up took the transceiver that was used to the location and was able to bring up several repeaters with "9-1-1" autopatch capability.

Hello,

I'm interested in a USB oscilloscope with the hardware and software, to use with my laptop. I'd like a frequency range to 50-Mhz. I did a web search and found quite a few models. I'd appreciate some advice and suggestions on this subject. Also, are there kits or plans for building one with free software?

Thanks

The main point is that there has to be a clear and defined life-and-
death emergency.

But there's also the point of who can declare an emergency? Can the
EMTs say that the ambulance breakdown is an emergency?

> > OTOH, would you want to have it on your conscience

Of course - but if someone needed them in a life-and-death
emergency....

There's also the question of contract provisions as part of the rental
agreement. Shoes in a locker are different from permanently installed
radio equipment requiring power and radiating RF.

Of course - but what if the emergency really does meet K2ASP's double-prong test? That is, it's a real life-and-death emergency, and there are no other facilities available that can do the job?

As KB9X points out, the quoted person who said "everything we do is life-and-death" was way out of line, and not representative at all. But what about real-life situations that meet the two-prong test? Granted they are very rare, and most of us will never encounter them, but the time to think about them is before they happen.

And it really isn't that difficult IMO. The fellow who directly called the Police didn't have a need to do that, and in truth would have been better off to call 911, as they are the people with the resources needed to rescue people in that situation.

There are some good reasons to use Amateur radio in emergencies. As an example, our local repeater system is a multi receiver polling system

http://www.nittany-arc.net/newrepeater.html

that takes the poll from several sites, selects the strongest one, and relays that to the main repeater. In this way, we can cover the whole county in a manner that 300 mw can pretty well work the entire area. This

is all the more impressive when you look at a topo map of Centre County PA.

Back to the reasons, if there is a deployment in the county, it can be a little difficult to establish comms from the regular systems, and in the northern parts of the county, cell phone coverage isn't easy to come by once you get away from the path that I-80 cuts through the hills.

So in the nooks and crannies of the north part of the county, our repeater is a good choice, and if there are operations in both north and south, ham radio is a pretty good choice, and fits the criteria.

I believe that in most cases, people aren't going to care a whole lot if there is a little gray area, but the "anything" description is just inaccurate and misleading.

While this may be a small minority of emergency workers who fit the "I can do anything I want to do" description, they do need their errors pointed out when they make them. According to the fellow I had the

discussion with at the meeting, there would be no rules anytime.

Ambulance crews cannot authorize themselves to commandeer property;
only civilian government officials can do that. The gravity of the
emergency has nothing to do with it. It is just not their call to make.

[...]

They would have to ASK you for them.

Not from a property ownership point of view.

We are not the first people to consider these issues. As I said
before, this is well-traveled territory. Phil's 2 prong test pertains to

emergency actions on frequencies that one is not normally allowed to use. It has nothing to do with the seizure of private property. That is a topic over which the FCC has no authority or jurisdiction whatever.

Not any more than aluminum.

> > The speaker (red cone is a plus) can be covered
> > with leather real
> > or faux. The shelves look a lot like the ones I made.

The table is homemade, too. The clock was assembled from the pieces of
several, each of which had a different problem. The result has been
functioning perfectly for at least 15 years.

> > Tubes glow, so they are already there......

Mercury vapor rectifiers and several different kinds of VR tubes.

But see above about "form follows function" and "aesthetically
pleasing without any added ornamentation". Would adding brass and
leather make any difference in rig performance? Or are they only for
looks?

IMHO, the form-follows-function aesthetic would brass- or nickle-plate
telegraph instruments to prevent corrosion. But it would not add brass
simply for a look. Same for leather - would the speaker sound better?

For me the moral of the story is that you need to match the training to
the individual. Surely someone with the qualifications you listed could
simply look throug a book for an hour or two and pass the test. Sending
someone that highly qualified to the sort of experience you mentioned
that is aimed at folks with no background at all is not apropriate IMHO.

Jerry

Yeah, you're right on what Steampunks advertise themselves as, but
that is also a small niche activity in home workshopping, not just
electronics. There's much more to be found in home wood-working
catalogs in regards to 'retro' design and home workshop construction.

A year or so ago, another sent me some links to old electronics,
especially metrology, such as a couple of old reproductions of
General Radio Company instrument catalogs. Interesting for the
moment to reflect on 'style' insofar as instrumentation designed
in the period of about 1880 to 1930. [the 'Victorian Era' is in the
beginning part of that mentioned half-century period]

In that half-century, the high (relative) cost of instruments was
coupled with a certain 'style' of 'craftsmanship' that involved
very-nice, but really non-functional, wood bases and lovely
'engraved' scales and rules (more useful to the instrument) plus
less useful all-purpose connector posts. To justify the high
labor cost (reflected in the product cost) of working with new-
fangled electrical things, the designers opted for that particular
'style' based on what could be made then but really from the
(guessed) customer's preferrence for 'looks.' Usually those
customers had to justify those new instruments to their funding
entities (managers, academic grant givers, etc.). 'Style' is a
subliminal kind of influence but any market is governed by it
to sell product.

General Radio is interesting in instrument company evolution.
In their beginnings there was no real 'style' and they depended
on the newness of any sort of electrical standards to sell their
products. It seems that GR was the first to market a ready-built
oscilloscope. At least in the USA. It had a tiny screen and was
built in three sections. That was in the early 1930s. In the later
1930s DuMont came out with a one-piece 'scope and larger face CRT.
That became the 'style' setter for many years, was even copied by
that post-WWII upstart company of Howard Vollum's called Tektronix.
Vollum's designs not only improved the innards but also exterior,
that which the majority classify as 'style.' With their plug-in
vertical function modules Tektronix now set the 'style' and

DuMont just couldn't keep up. Even HP got into competition and used the same 'style' of physical form on those...but took many years of catch-up to the clear leader of oscillography, Tektronix. GR was left way behind in oscilloscopes, giving up on that market after the end of WWII.

But, GR, now under new leadership at the end of the 1950s, got its exterior 'style' together with a 'new look.' Much more intrinsic visual appeal of form-fit-color in an instrument. They were aided by new methods of metal and plastic forming and some imagination applied realistically to that 'style.' Alas, they didn't get with the new technology intensively enough and eventually dropped out, despite the high accuracy using old technology and 'craftsmanship.' GR had also opted to try a 'luddite' form of PR on their instrument constructions, featuring ONE technician 'doing every-thing' of an instrument, 'no production line methods.' Bad PR and the wrong kind of style of advertising to a customer base that was largely involved IN production. 'Style' is lots of things, not just in its outward physical appearance.

Take Hallicrafters for radios. A Biggie among amateurs before WWII and in the immediate post-WWII period. The pre-war 'style' peak might have been the SX-28 HF receiver just from appearance. Their post-war 'style' peak might have been the SX-62 Big Dial AM-FM and 'shortwave' band receiver. They, like National Radio, came out with a consumer product TV receiver and (like National) failed to penetrate the market with their 7" electro-static deflection design. Hallicrafters had a better exterior 'style' than National's wooden cabinet model but was doomed in not going towards bigger screens. Collins Radio beat both out in commercial and military equipment after WWII. Collins Radio established its own 'style' which dominated lots of aesthetic sensibilities back then. RACAL in the UK was a strong rival in that. Hallicrafters just couldn't get with the program after around 1960 and just drooped, eventually dropping out.

Market rivalry in the USA began to be taken over more and more by off-shore designer-makers around 1960. WWII was over a long time by then and off-shore production in electronics was ramping up on all markets of electronics, including amateur radio. The Big 3 (Icom-Yaesu-Kenwood) began their domination, establishing their own exterior AND interior 'styles'. Lower labor costs (and smarts) made the Japanese the leading Asian off-shore producer first, quickly followed by Taiwan and China. Their 'style' of electronics became THE style to copy, engraved in visual centers of many minds for a quarter century.

>But to return to topic, The concept of making a station conform to an
>aesthetic is not all that unusual.

I'm NOT saying that nor ever implied it. But, let's take it in context. Who or what determines a 'retro' look? And what is its

appeal to certain folks?

A half-century ago ought to qualify as 'retro' to most. But how
many were alive or experienced in such period radios? I was in my
twenties in the 1950s but nowhere would I consider 'going retro' to a
stark utilitarian environment kind of radio communications that I
got started in over a half century ago. Neither does the 'style'
of electronic things done in a period before 50 years ago appeal
to very many. There are SOME exceptions: The Zenith Transoceanic
line of portable receivers spans the pre-WWII and post-WII times
with its own unique 'style' that is unmistakable. It IS attractive
to so many that it has a large fan base on the Internet, several
URLs, all for one model line. It has a distinct STYLE to its design.

I'm not against 'having fun' with radios. With receivers (or
transceivers) one spends a LOT of time looking at front panels
whether or not a user realizes that. Subliminally, at least, the
appearance of a front panel, its control arrangement, colors,
indications, etc., enter the visual cortex and become memory.
Will added brass geegaws enter into the mind as adornement for
the memory just because they look pretty at first glance?.

>Our stations can be an expression of
>ourselves, and we can either place the items on the desk and be done
>with it, or we can embellish the room as we see fit. It is just another
>way to have some fun.

I don't agree with that entirely. First of all, an amateur radio
is a communications device, not an article of 'interior design.'
Secondly, today's ready-built amateur radios can stand on their
own as far as appearance and 'style' is concerned. That includes
most peripheral equipment. OTHER people did the styling of all
those, contemporaries, not some long-gone folks of another era a
century ago.

Thirdly, we have to be careful about 'style influencing.' No one
should dictate what or how we 'have fun' in radio other than technical
requirements of radio regulation. That includes 'style' matters
in my mind. Fashion styles exist to Sell More Clothes and Make
More Money for clothing makers...it was not really about aesthetic
appearance despite what the PR write-ups say (those write-ups are
crafted to help sell those clothes). Radio equipment isn't in such
a 'style' area. One either feels comfortable with a radio or not.
That covers its technical performance first, appearance a second.
The amateur operator will be looking at amateur radio equipment
the most at any home station. If other non-radio-interested members
of a household see it often, it should not (for their consideration)
appear too offensive to them.

All-mechanical things are fine fun for those who like to do that.
Old-time telegraphy equipment is one area well suited for such
reproduction. Many amateurs like to collect manual keys. Fewer

can make their own without ALSO having at least a small machine shop at their disposal. The same holds true for electrochemical treatment beyond simple PCB etching (which very few see once it has been loaded, tested, and put into equipment). I've learned to do simple tasks in all those areas but have found that working in wood and plastic basic materials is easier for hobby construction. It is simpler to do even if not flashy. I just don't have, or care to have,
a small all-purpose factory on the premises for any sort of manual construction hobby.

Now, MY likes or dislikes don't apply to others. I've been writing (hopefully) in generalities. All of electronics is generally based on FORWARD-LOOKING technologies and 'going retro' in any regard may be of momentary aesthetic appeal. There ARE devotee of equipment of a particular radio era. 'Mileage varies.'

It seems like your xyl did the same thing as my wife, only in the opposite direction. She's every bit as intelligent as me, a quick study, and she has expressed some interest, but says "I could never do the things that you do", referring to the homebrewing and design I do. I keep telling her it isn't like that at all for a majority of Hams, but so far she has not gone for it. And likewise, I'm not going to press the issue! ;^)

I suspect that what happened here is that for a woman of her abilities, the material was presented too slowly and at the level of the lowest common denominator and she couldn't stand it (too boring). She would probably have done just fine with the Question & Answer book and it's brief explanations.

I would like to see other opinions on this issue, which came up in passing in another group.

One of the participants there mentioned that a ham radio license has been added as an employment condition for some of their professional responders. Presumably the motivation is based on a desire to have a known population of people who can use ham radio technology in a disaster if nothing else is working.

I have two questions on this.

Is this a common situation? I hadn't heard of a formal requirement until it was mentioned on the other forum, but a couple more people came forward and said that it was in place in their area. Is it happening in your area?

Do you think it's a good idea?

Steve,

Where I live, middle TN, we are seeing a lot of medical, law enforcement, and emergency service types turning up in our technician and general class classes. So far as I know, none are there by requirement or "suggestion." It is just a desire to have another tool to use, and as the result of what they have seen that ham radio can and has done. In some cases, I suspect that the extent of their operating is to check in on the monthly hospital net.

It does not seem to be an unreasonable requirement for a job, given how easy the licence process is today. The rest of the hiring process will at least provide some selection of people with demonstrated responsibility. It certainly is not extraneous to most job requirements.

On Mar 3, 9:58 am, Steve Bonine <s...@pobox.com> wrote:

> Is this a common situation?

I've never heard of it before.

> Do you think it's a good idea?

No. At least not as a formal requirement for the job. I'm all for
encouraging and recruiting new hams,
and supporting them, but forcing them to be licensed as a condition of
employment is not a good idea, except maybe
in certain specific conditions.

Here's why:

(insert standard "I-am-not-a-lawyer" disclaimer HERE)

One of the rules about hiring-and-firing is that you cannot make
something a formal requirement for a job unless it is a reasonable
part of the normal job duties. For example, if the job involves
typical office work, you can't make it a requirement that an employee
be able to lift a 100 pound box and place it on a shelf 6 feet above
the floor unless doing so is a normal part of the job. Once in a blue
moon isn't good enough.

OTOH, if the job requires that a person occasionally drive a company
vehicle, having the required driver's licenses to do so is a
reasonable expectation.

So if an employer wants all hires to have a ham license, one has to
ask if using ham radio for communications is a routine part of the
job. If it's not, then the requirement isn't reasonable. If it is,
then we have to ask about the "pecuniary interest" part of Part 97.

The specific conditions I mentioned above are:

1) If a school had ham radio as part of the curriculum, and a specific
teacher was expected to be able to operate the station so the students
could, say, talk to the Space Shuttle. Even this is not clear-cut
because a volunteer or one of the students could be the control
operator.

2) If an organization like ARRL Hq or a museum needed someone to
operate an amateur station as part of their normal duties (demos,
bulletins, etc.)

Both of those are specifically provided for in Part 97.

The problems I see with requiring employees in other situations to be hams are:

1) It weakens the no-pecuniary-interest thing.
2) It creates a number of amateurs whose fundamental focus isn't "radio for its own sake" but rather "something I gotta do for the job". Which isn't good.

IMHO

It isn't a requirement in our area, but it is apparently strongly encouraged. This is one of the situations that I refer to as "Professional Hams". It is truly a profound change in emergency operations. I am pretty convinced that the end strategy of all this is that these groups expect to use amateur radio via their "professional hams, and will not use hobbyists in the future.

> Do you think it's a good idea?

Not particularly.

The nature of emergency work is that it only happens when there is an emergency, so people have a lot to talk and think about in between emergencies.

One of the things that emergency planners do best is impose a structure on work and situations. The problem is that structure tends to go away as soon as the emergency happens, just like battle plans.

It's why Ice trucks were left sitting in parking lots in another state when they were needed in the Katrina aftermath, its why emergency groups talk about interoperability, not realizing that the more structure they put in place, the more points for failure there will be. We seem to think that if "the boss" can see what everyone is doing and can directly command them, then all will be well. When in reality, the folks on the ground need to be able to function autonomously and be trusted to make a decision.

So instead of having trained communicators on board - note that by trained communicators, I mean people who know how to get comms across X number of miles at Y o'clock, not those who just know what to say - we'll be having professionals who happen to have a license.

Getting a Ham radio license is just an entry ticket. Are these new folks going to be able to put together a repeater system when the hurricane comes through and knocks out every other one in the stricken area? Will they wonder why they can't talk to others in the same state on 20 meters or that 75 meters seems so dead during the daytime? That is what Hams have brought to the table over the years.

I know that mine is a minority opinion, hopefully I'm very wrong!

Of course you can arrange your station to your own aesthetic 8^)

> But see above about "form follows function" and "aesthetically
> pleasing without any added ornamentation". Would adding brass and
> leather make any difference in rig performance? Or are they only for
> looks?

Well, now you open a interesting subsubject! The addition of brass to a station is one of those choices that does not necessarily defeat function. There needs to be a chassis to place components on or in. Is aluminum or steel or plastic more functional than brass? there might be some technical reasons fort one over the other, but in the end, they are a support structure. An example is the copper plated chassis found in some radios. Pretty cool. But I wonder how much "worse" they would perform if they weren't plated?

> IMHO, the form-follows-function aesthetic would brass- or nickle-plate
> telegraph instruments to prevent corrosion. But it would not add brass
> simply for a look.

Keeping in mind that fff could be used to not allow any embellishment, such as staining, finishing, we have to make sure we don't minimalize things out of existence.

side note: I once went to a classroom where a true minimalist had hung a data projector from the ceiling from wires. Problem was, the fan would push the projector, only as far as the wires would allow, and it made a pendulum. People were getting seasick!

Same for leather - would the speaker sound better?

well, possibly could make for some vibration damping.

My thoughts are to make a setup that incorporates the aesthetic in a fashion that is applicable to the situation. The equipment has to sit on something, so it will be made in a fashion that involves natural materials, and brass will be used where needed. I'm not going to remove my radios from their cases and build wooden boxes around them. I don't plan on overly embellishing the station, my goals are a warm feeling with an antique look where practical

Especially number two!

One thing I'll note there is that at least one of the new "Emergency Ops" guys in our area has become hooked on Amateur radio for it's own sake, and assuming his test last weekend went okay, is now a General, and is getting into HF mobile in a big way. He'll be an asset to the service.

So that is a really good thing, but I still worry about the "Professional Amateur" aspect

All that for the lack of one, properly placed additional wire, heh.

That's easily and authentically achieved by obtaining an old wooden desk
and some genuine vintage equipment.

I have the castoff oak veneered desk from W8YX, the University of
Cincinnati ARC station. It is shown in a photo of the station which
appeared in a 1937 QST article about the Ohio River flood.

If I want a "thirties feel", I can fire up W4JBP's homebrew xtal
controlled 6L6 rig and pair it up with an HRO, SW-3, FB-7, an RME 69 or
a Hallicrafter Sky Challenger. If I want to move to the fifties, my
Johnson Valiant or Central 20-A might be paired with an HQ-70 or a
Collins 75A-3.

Dressing up modern technology to look as if it is powered by steam,
strikes me as more than a tad silly.

No. I refer to N2EY's thoughtful response. I don't think it makes any
more sense to make obtaining an *amateur* license part of a professional
position any more than requiring an applicant for an amateur radio know
how to to fight fires.

My experience does not support that, but I realize that it's MY experience and that the situation in other areas may be different. That's one of the reasons I started the thread; I am curious as to how things are in other areas. I doubt that my area is typical, but I'm not sure that "typical" even exists in this case.

I don't see our professional emergency management folks thinking that they will replace the traditional ham radio recruit, the "hobbyists" if you will. They seem to be more interested in getting licensed so that they can work more effectively with the ham volunteers, and "tap in" to the resources that are available. They see cases where hams are providing something positive and they want to be able to take best advantage of it.

Most of these professionals realize that the actual radios and the technology, while important, isn't really the most important component of what the ham radio community can provide. It's the people that matter the most. Rather than trying to minimize that, the paid emcomm folks that I have seen are trying to maximize it.

> One of the things that emergency planners do best is impose a structure

> as soon as the emergency happens, just like battle plans.

With all due respect, having an effective battle plan is key to winning a battle. They don't "go away", any more than an effective emergency plan does. Sure, things seldom go exactly as the plan would suggest, but the more planning is done in advance, the higher the probability that things will go more smoothly.

Katrina was probably the ultimate example of how Mother Nature can throw things at us that are beyond the threshold of our plans. Even so, the organizations that had invested in planning came out much better than the ones that had not.

> It's why Ice trucks were left sitting in parking lots in another state

Plans are not perfect. That doesn't mean that we shouldn't plan. I am not willing to concede that ice trucks sitting in the wrong place were a result of planning. In fact, my conclusion would be the opposite -- if the plan were better, the material would stand a better chance of getting where it needed to be.

Sure, the folks on the ground need to be able to make decisions, but the people trying to manage the big picture need to know what that decision was so that they can integrate it into the response. It's not an ideal situation when the folks on the ground MUST function autonomously because they have not the slightest idea what their compatriots are doing since they can't talk to them.

If I'm placed into the position of having to make a command decision, I'm more comfortable making that decision if I have good information upon which to base it. Without communications, that information is often missing.

And I hope that they continue to do so. I just don't accept the premise that having paid members of the team as licensed amateurs changes that situation. The more that the people who are managing the disaster know about ham radio, the better they will be able to make use of the resource.

And who knows . . . some of the people might get hooked and actually grow into full fledged ham contributors.

Of course, it depends. For a job working behind the counter at a retail store that was, um, "geared" particularly toward ham radio equipment, parts, and supplies being licensed was a requirement. A non-ham couldn't, among other things, speak the language or have had any experience with the equipment and antennas. Besides, only the hams were partaking in the Saturday morning coffee and donuts. ;-)

In fact, I remember the newspaper help-wanted ad very specifically: "Ham radio operator wanted for full-time counter sales."

Actually, Steampunk is only a few pieces of brass and leather away
from my aesthetic...

Actually I think it's the whole subject....

> The addition of brass to a
> station is one of those choices that does not necessarily defeat
> function.

Agreed - but in the Triple-F aesthetic (hereafter referred to as
"The Southgate School" or TSS), not defeating function isn't enough.
All choices must enhance or support functionality.

TSS also involves the use of available materials and techniques,
usually from non-traditional sources. The rig pictured on my website
(known as the Southgate Type 7) was built almost entirely from reused/
recycled/recovered parts found at hamfests and in junkpiles. A few
crystals were bought new, as was the solder, but that's about it. The
main tuning capacitor is from a junked BC-221 frequency meter; the
dial drum is cut from a piece of Perspex tubing 6" in diameter that
came from a piece of industrial equipment, the VFO box was made (by
hand - hacksaw & flat file) from scraps of 3/32" thick aluminum plate,
etc., etc.

IOW, "found objects".

> There needs to be a chassis to place components on or in. Is
> aluminum or steel or plastic more functional than brass?

Depends on the application.

For things like power supplies, steel is preferred due to greater strength and some level of magnetic shielding. But steel must be painted, plated or otherwise finished to prevent rust, particularly in a basement shack where humidity may be high.

For things like transmitters and receivers (TSS does not normally use built-in power supplies because they usually decrease functionality), aluminum is preferred because of its light weight, corrosion resistance, higher conductivity and ease of working.

Brass has good conductivity and is easy to work, but it is heavy, expensive, and rarer than aluminum or steel. There is some use of brass in TSS, mostly for specialized applications where aluminum is too soft and plating or painting steel is not practical. For example in the Southgate Type 7, there is a shaft extender from the tuning capacitor which I made from brass. You don't see it but it's there.

> there might be
> some technical reasons fort one over the other, but in the end,
> they are a support structure.

Agreed. I have used wood as well, in applications where shielding wasn't important, or could be obtained in other ways.

> An example is the copper plated chassis found in
> some radios. Pretty cool. But I wonder how much "worse" they
> would
> perform if they weren't plated?

Copper plating of steel chassis (Drake is a prime example) was done for a couple of reasons. One was corrosion protection; since the steel had to be coated with something to prevent rust. Unlike most paints, copper plating is conductive, so shields and components mounted to the copper-plated chassis would make a good chassis connection. Another plus is the ability to solder directly to the chassis.

But copper plating has disadvantages too. One is that the copper tarnishes over time. Another is that any break in the plating can set up electrolytic corrosion. There's also the cost and relative impracticality of copper-plating at home.

What Drake and others did was to plate the chassis after all the holes were punched. That's fine for production-line manufactured rigs, but if there's a possibility of future changes that require new holes, the plating would be broken. So I stick with aluminum, steel, and sometimes plastic and wood.

> Keeping in mind that fff could be used to not allow any
> embellishment,
> such as staining, finishing, we have to make sure we don't
> minimalize
> things out of existence.

TSS is about simplicity and functionality, not minimalism. If staining
or finishing improves the functionality, it is done. For example, the
shack tabletop consists of a layer of oriented strandboard (for
strength) topped by a layer of masonite (for a smooth hard surface).
This combination (actually a composite) was chosen because it was the
least expensive at the time. The masonite was given a couple of coats
of varnish because doing so improved the functionality.

> I once went to a classroom where a true minimalist had hung a
> data projector from the ceiling from wires. Problem was, the fan

> push the projector, only as far as the wires would allow, and it
> made a
> pendulum. People were getting seasick!

There's a textbook example of form *not* following function! The
purpose of the data projector support is to hold the projector at the
proper place so it can do its job, and if the image isn't rock-steady
the appearance doesn't matter.

> **>** Same for leather - would the speaker sound better?
> **>**
> **>** well, possibly could make for some vibration damping.

Possibly. I've had some experience building speaker cabinets (clones
of the Altec A-7 "Voice of the Theater", JBL folded horns, for
example) and the trick is to build solid from the beginning.

> My thoughts are to make a setup that incorporates the
> aesthetic in a
> fashion that is applicable to the situation.

Which is the basis of Triple-F. You're not far from joining TSS!

> The equipment has to sit on
> something, so it will be made in a fashion that involves natural
> materials, and brass will be used where needed.

There's the key: "where needed".

> I'm not going to remove
> my radios from their cases and build wooden boxes around them.

OTOH, wood can be a good cabinet for a rig that doesn't have one.

> I don't
> plan on overly embellishing the station, my goals are
> a warm feeling with an antique look where practical.

I've always wondered what the fascination with "antiques" is. I can
understand the fascination with craftsmanship, design, practicality
and materials, though.

The term I would use is "classic" or "timeless". Look at some Mission
or Shaker furniture - it does not appear "antique" or dated. That's

what TSS is all about, applied to Amateur Radio (and a limited budget!)

For another example, look at the classic Hitchcock film "Rear Window". Even though it is more than 50 years old, the overall look of James Stewart's New York apartment, the clothes, the cameras, and all the other details are so classic that you'd want to live there today. (Having Grace Kelly stopping by doesn't hurt either!)

Yet "Vertigo", made just a few years later by mostly the same people (Hitchcock, Stewart), looks very kitschy and dated by comparison.

Perhaps the biggest challenge is that our hamshacks are usually works in progress, rather than fully complete, so flexibility has to be designed in too.

I had a little trouble following this in that the attributions appear to
be wrong. I don't think you were really replying to yourself.

> Take Hallicrafters for radios. A Biggie among amateurs before WWII

It might have been, but there were other contenders with big, German
Silver engraved dials.

> Their
> post-war 'style' peak might have been the SX-62 Big Dial AM-FM and
> 'shortwave' band receiver.

Except that wasn't a number produced or sold in large numbers.
Hallicrafters had a number of contenders in the post war period. Some
of these include the SX-100, the SX-115, the SX-88 and the SX-42. Even
the Raymond Loewy-desgined, inexpensive S-40B would have been on the list.

> They, like National Radio, came out

Hallicrafters did not do anything special in designing the cabinet. The
very same cabinet style was used in the SX-101, HT-32/32A/32B, HT-33 and
perhaps one additional linear amp.

> Collins Radio beat both out in commercial and military equipment
> after WWII. Collins Radio established its own 'style' which
> dominated lots of aesthetic sensibilities back then.

Collins had two-and-a-half styles during the fifties: There was the big and clunky series of transmitters and receivers all painted in a very dark St. James gray wrinkle finish. These included the 51J series of receivers, the 75A series, a series of high power and low power AM/CW transmitters and the KWS-1 SSB high power transmitter. Then came the intermediate styling of the tiny KWM-1 SSB transceiver. That was followed by the light gray, low profile styling of the KWM-2/2A and S-Line in the late fifties.

> RACAL in the
> UK was a strong rival in that.

RACAL, jointly owned by those in the UK and in South Africa was never a contender in the amateur radio market at all. Eldico did make some Chinese copies of early fifties Collins gear which was sold to the amateur market. Many USAF MARS stations were also equipped with the Eldico stuff.

> Hallicrafters just couldn't get with
> the program after around 1960 and just drooped, eventually
> dropping out.

I don't believe that Hallicrafters was ever a big player in the military market, post WW II.

> Market rivalry in the USA began to be taken over more and more
> by off-shore designer-makers around 1960.

Japanese manufacturers did not gain more than a toe hold in the U.S. amateur radio market until about 1969 or 1970 so you're about a decade off there. Only in low-end, inexpensive stuff sold by the likes of Lafayette Radio, did the JA stuff do well. Most of their "communications receivers" weren't really that.

> WWII was over a long
> time by then and off-shore production in electronics was ramping

> their own exterior AND interior 'styles'. Lower labor costs (and
> smarts) made the Japanese the leading Asian off-shore producer
> first, quickly followed by Taiwan and China. Their 'style' of
> electronics became THE style to copy, engraved in visual centers
> of many minds for a quarter century.

WW II was only over for fifteen years by 1960. Icom was not a big player in the U.S. in other than the 2m FM game until the late seventies. Yaesu had a head start on Kenwood in SSB transceivers sold in the U.S. Kenwood (actually still Trio at the time) made some inexpensive gear sold by Lafayette and others. Kenwood HF gear didn't really start selling much until the early/mid-1970's.

I don't see "smarts" entering into the mix as much as low price. One could save hundreds of dollars on an HF transceiver made in Japan compared to the price of one made in the U.S. Early Japanese suffered

from awful receiver performance. That made it possible for outfits like R.L. Drake to stay in the market until the mid-1980's. It also made it possible for companies like Ten-Tec to grow from what was essentially the producer of inexpensive QRP rigs to a maker of full featured HF rigs.

To my knowledge, no amateur radio receivers, transceivers or linear amps made in Taiwan have ever been marketed in the U.S. I believe the first HF transceiver to be built in China is the Yaesu FT-2000.

>> But to return to topic, The concept of making a station conform to an
>> aesthetic is not all that unusual.
>
> I'm NOT saying that nor ever implied it. But, let's take it in
> context. Who or what determines a 'retro' look? And what is its
> appeal to certain folks?

There are those now marketing (Thomas) what look like cathedral or tombstone radios which incorporate AM-FM tuners and CD players. Those who buy them must like them--and I'll even go so far as to say they deserve them. They are retro in style. They just aren't authentic. I'm much rather own the real thing than some modern contrivance.

> A half-century ago ought to qualify as 'retro' to most. But how
> many were alive or experienced in such period radios?

I'm not certain how that matters.

> I was in my
> twenties in the 1950s but nowhere would I consider 'going retro' to a
> stark utilitarian environment kind of radio communications that I
> got started in over a half century ago.

When I became a radio amateur 44 years back, I used junk. That didn't mean that everyone used junk. Much of the high end stuff of that era is quite capable of doing a good job today. My Hallicrafter HT-32B uses the crystal filter method of sideband generation. It puts out nearly 100 watts and it features 1 KC readout. The Collins 75A-3 it is paired up with uses selectable mechanical filters and it too has 1 KC readout. Neither can be considered "stark utilitarian".

> Neither does the 'style'
> of electronic things done in a period before 50 years ago appeal
> to very many.

I dunno. One of the first things visitors to my home notice is a 1942 Philco console AM/SW radio in the living room. They ooh and ahh over it and want to know if it works. When I turn it on and let them hear KDKA rolling forth from the big speaker, they're impressed. I know of a number of businesses who'll obtain and "remanufacture" such radios on order for those who want one in their homes.

> There are SOME exceptions: The Zenith Transoceanic

> URLs, all for one model line. It has a distinct STYLE to its design.

Well, at least *two* distinct styles. The solid state Transoceanics are
quite different looking than the earlier models.

> I'm not against 'having fun' with radios.

That pleases me, Len.

> With receivers (or

> Will added brass geegaws enter into the mind as adornement for
> the memory just because they look pretty at first glance?.

If I want extra brass, I'll add a diving helmet or a ships lantern. The
manufactured radio equipment of the past is what it is. It doesn't need
the extras.

>> Our stations can be an expression of

>
> I don't agree with that entirely. First of all, an amateur radio
> is a communications device, not an article of 'interior design.'

I don't think that was claimed. I have a neighbor who makes kitchen
cabinets with raised panel doors. He has made many a hutch or computer
center with similar raised panels, all out of solid wood. I'm giving
serious thought to having him make me a new operating position. The
choice is mine to make. If someone else wants to set his gear up on a
card table, that is his choice to make.

> Secondly, today's ready-built amateur radios can stand on their

> those, contemporaries, not some long-gone folks of another era a
> century ago.

I'm not one who believes that things have to match. I go for function
first in my primary station. Everything else is secondary. The long
ago stuff is of interest to me and I enjoy having it surround me.

> until it was mentioned on the other forum, but a couple more people came
> forward and said that it was in place in their area. Is it happening in
> your area?

Not that I know of.

> Do you think it's a good idea?

I wouldn't mind having a job that required me to be a ham, but being required to have a ham license in addition to being trained for some other field does, as others have pointed out, risk degrading the quality of applicant.

I think what the emcomm managers _really_ want is a commercially licensed emergency radio technician and communicator, but there's no license for that. The problem with requiring a ham license is that there's so much variability in the training and currency of hams, not to mention their physical condition, that I don't think that having a ham license is a reliable indicator of emcomm proficiency.

After all, _any_ municipal employee can be trained to operate a two-way radio: what's required in an emergency is guys that can operate the radio _and_ put up the antenna _and_ figure out which rigs can share a power supply _and_ figure out which existing antennas are "close enough" for the frequency needed _and_ get a CD-badged Gooneybox to communicate with an FM radio. Long story short, I think requiring a ham license involves an assumption that anyone with a license knows how to operate and improvise in an emergency, and that's not true.

FWIW. YMMV.

Even with that, most buildings shake a little due to machinery, HVAC,
etc, and in the end, a projector mounted that way would be a problem.

> That's easily and authentically achieved by obtaining an old wooden desk
> and some genuine vintage equipment.

Oh yeah. I enjoy the look, and even went for it in a small way with some
tube equipment I bought a few years ago.

<some snippage>

> Dressing up modern technology to look as if it is powered by steam,
> strikes me as more than a tad silly.

Absolutely! This aesthetic is in no way saying "look at me! I'm serious
art!" I would go a little further to state that some examples of the
genre are downright ridiculous - by design. Interviews with the creators
usually show them to have a great sense of humor, and that they enjoy
pulling our legs at times. But they want everyone in on the joke.

That being said, there are examples of great beauty in there, on the
workshop page, the telegraph sounder was gorgeous, and the pick guard on
the Stratocaster is beautiful.

There is actually some of this aesthetic running about in Amateur
radio, even if we don't notice it.

Like keys for instance

Just look at say Begali keys. What workmanship and quality! These things are true art. Other keys are gorgeous too. Even my modest Bencher has an attractive look to it.

But most of that stuff isn't really needed. Certainly the Begali keys are playfully experimental in nature, and the gold plating isn't really needed, it's there for aesthetics.

And yet, I could go out to the garage, and make a serviceable paddle with a piece of 2 by 4 and some springy metal.

Nominating Period Open For 2008 Amateur Radio Newsline
Young Ham Of the Year Award

Los Angeles, CA. (March 1, 2008) - If you know a young radio amateur age 18 or younger who has done something very special in the Amateur Radio hobby, this is the time to consider nominating him or her for the 2008 Amateur Radio Newsline Young Ham of the Year Award.

HOW THE YHOTY AWARD WORKS

The "Young Ham of the Year Award" is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger, is a resident of the 50 United States, Canada provinces or Puerto Rico, and who has provided outstanding service to the nation, the community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

All nominations must be received by May 30 of any given calendar year on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the Young Ham of the Year Award c/o Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download or on-line submission from our special award website at http://www.yhoty.org

WHOM TO NOMINATE

Here are some of the things you should be thinking about it in a nominee. First off, as noted above, the nominee must be age 18 or younger and a resident of the United States, Canada or Puerto Rico. He or she must hold a valid Amateur service license issued by the United States FCC or Canadian telecommunications regulator Industry Canada.

Also, your nominee should be someone who has done something outstanding as an Amateur Radio operator. Perhaps it was something special he or she did for his community through the Amateur service. Maybe it was some outstanding achievement that led to an improvement in amateur radio in his or her area. Or perhaps he or she was successful in recruiting a lot of new hams. Whatever it was or is, we want to hear about it.

If you're looking at what makes a good candidate, we suggest you check out our special Young Ham of the Year website at www.yhoty.org and look at the credentials of past award winners.

HOW TO FILE A NOMINATION

Printable nominating forms and an on-line click-to-send form are available at www.yhoty.org. It's very important that you, as a nominator, fill out the on-line or downloadable and printable application as required. If you're sending it by way of the regular mail, please make sure it reaches us at Amateur Radio Newsline by May 30 2008. That's the deadline for all applications.

In addition, we need as much documentation as you can give us so the committee can carefully evaluate each nominee. When we say documentation, we are talking about letters, e-mails, magazine articles, videos and other kinds of endorsements that would accompany the application. In the past, we've even had photos e-mailed in with some of the applications.

THE AWARD PRESENTATION

As in years past, the 2008 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest in Alabama and a gift of Amateur Radio gear compliments of Vertex-Standard Corporation. Those are the folks who manufacture the famed Yaesu line of ham radio gear. And from our other primary corporate sponsor -- CQ Magazine -- the winner gets a week at Spacecamp Huntsville, where he or she can learn first-hand about man's conquest of the final frontier.

But none of this can happen without you. Now is the time to get on line, go to www.yhoty.org and fill out that on-line nominating form or download a nominating form, print it and send it in. Either way, you and some worthy young ham will be glad that you did.

SOME BACKGROUND ON THE PRIMARY AWARD SPONSORS

The Young Ham of the Year Award program was created in 1986 by Bill Pasternak, (WA6ITF) and is sponsored by the Amateur Radio Newsline, Inc.. Better known as "ARNewsline" it is the world's largest not for profit (501(c)(3)) and totally independent ham radio broadcast news and data

information service. It was organized in 1976 as the Westlink Radio Network by Jim Hendershot (WA6VQP), and Bill Pasternak (WA6ITF). Since that time it has produced and aired over 1538 consecutive weeks of free news bulletin programming dealing with Amateur Radio and related personal communications issues.

Primary corporate underwriting since the inception of the "Young Ham of the Year Award" program is supplied by Vertex-Standard Corporation (Yaesu U.S.A.) and CQ Magazine. Vertex-Standard is a world leader in the design, manufacture and distribution of Yaesu brand high quality Amateur Radio and Vertex brand commercial two-way radio equipment.

As of 1995, CQ Publishing has been an additional corporate underwriter. CQ Magazine and its sister publications are owned by CQ Communications and are considered the trend-setting publications serving today's modern radio amateur.

Past recipients of the Young Ham of the Year award include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston W. VA. (2001)
Josh Abramowicz, KB3GWY, of Reading PA (2002)
Jay Thompson, W6JAY, of Santa Ana CA (2003)
Andrea Hartlage, KB4IUM, of Grayson GA (2004)
Rebekah Dorff, WG4Y, of Birmingham AL (2005)
Catherine Ferry, NC8F, of Silver Lake, OH (2006)
Grant Morine, W4GHM, of Wilmington N.C. (2007)

ABOUT THE UNITED STATES AMATEUR RADIO SERVICE

The United States Amateur Radio service is force of over a 600,000 publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster. In the moments immediately following the 911 terror attacks,

Amateur Radio volunteers became the first-response communicators in New York City after a major portion of that city's radio system was destroyed. Hams also provided life-saving communications along the U.S. Gulf Coast during and after Hurricane Katrina made landfall in 2005.

Bingo! What has happened over the years is that radio communications skills have been marginalized to such an extent that they overdid it. The skill set that Hams bring to the emergency used to be shared by professional radio ops. But the powers that be wanted highly simplified systems that required no more electrical acumen than turning the radio on and mashing the PTT button ended up meanining that no one knew much about radio, and therefore needed someone who did to help.

Ask an Emcomm manager if they would rather have the "unpaid volunteer" Ham or someone who actually worked for them doing comms, and I would be surprised if anyone would prefer the Ham.

Maybe. Another wire, mounted diagonally from the rear would have done
away with most of the pendulum action. If you're worried about
buildings shaking, even a steel mounted would have such vibrations
transfered to the projector. The wires might have even damped those
types of motion.

> attractive look to it.

Some guys like Picasso. Some like Wyeth. If you liked the Bencher,
you'd love the FYO keyer it is based on. Either a metal like brass or
nickel is needed or some sort of plating is necessary to keep the metal
from corroding/rusting.

> But most of that stuff isn't really needed. Certainly the Begali keys
> are playfully experimental in nature, and the gold plating isn't really

Some kind of plating or paint is needed and it isn't practical to paint
things like the threads of screws. Key's aren't designed to look as if
they're steam powered.

> And yet, I could go out to the garage, and make a serviceable paddle

I think we could all agree that such a contraption would be ugly in the
eyes of most. Additionally, it wouldn't be likely to work very well.

Agreed. Also the rare PRO-310.

I find it impressive that Hallicrafters made so many different
receiver models in so few years (say, 1945-1960).

I would not describe them as "clunky". They were big and heavy because
that's what the job required at the time.

Included in that list is the 75A-4, a pioneering receiver that
is still a good performer, and which can be modified to be
an excellent performer. (The mods involve using a better
tube for the RF amplifier upgrading the 6BA7 mixers).

The 75A-4 is the first receiver I know of that included passband
tuning as a standard feature.

>Then came the
> intermediate styling of the tiny KWM-1 SSB transceiver.

Yep. I don't think Collins ever repeated that!

> That was
> followed by the light gray, low profile styling of the KWM-2/2A and

That's true.

> Only in low-end, inexpensive stuff sold by the likes of
> Lafayette Radio, did the JA stuff do well. Most of their
> "communications receivers" weren't really that.

Lafayette HA-350, anyone? Henry Radio Tempo One?

There were also Japanese parts sold through Lafayette and others, such
as vernier dials, knobs, panel meters and other parts. Allied
also got into that game.

> WW II was only over for fifteen years by 1960.

> Kenwood HF gear didn't
> really start selling much until the early/mid-1970's.

IMHO what turned the tide were two now-classic HF rigs: the Yaesu
FT-101 and the Kenwood TS-520.

Actually these were families of rigs, and the early ones weren't any
great shakes, particularly the FT-101. But the companies learned and
improved, and by the time of the FT-101E and the TS-520S they were
pretty decent. Not Drake or Collins quality, of course, but not Heath
either. And they offered things American rigs did not.

Consider the TS-520S, for example. It did the usual 80-10 meter SSB
job pretty well. But it also gave a choice of AGC fast/slow/off, an
optional narrow CW filter that was pretty good, RIT/XIT, 160 meters
and WWV/JJY, fan-cooled finals, plus a built-in AC power supply.

> I don't see "smarts" entering into the mix as much as low
> price. One
> could save hundreds of dollars on an HF transceiver made
> in Japan
> compared to the price of one made in the U.S.

Not just price but price/performance/features combo. For example, try
to think of a US-made HF amateur transceiver that had the following:

- 100 watt output class
- 6146 finals, not sweep tubes
- Sharp CW filter
- RIT/XIT
- AGC off/slow/fast

> Early Japanese suffered
> from awful receiver performance.

Particularly IMD in their SS products. They could not compete with
tube designs. They got better, though.

40 years of Ten Tec ham rigs. Incredible.

Digi-Key got its start about the same time as Ten Tec - 1968 or so.
Their name comes from the fact that the company got started by selling
digital ICs (RTL!) in small quantities to hams so they could build
solid-state Morse Code keyers. Then they just kept growing, but the
name stayed.

Exactly. Nor are they overly ornate. They are functional and
attractive just as they are.

The same is true of a lot of homebrew gear. Look up the stuff made by
one of my Elmers, master homebrewer W2LYH. (several QST articles).
Great stuff, high performance, no ornamentation, Sounded great on the
air, too.

I have to strongly agree with my brother here. (Yes its come to this. Its come to this. And wasn't it a long way down.) I'm deliberately trying to prepare myself to be an effective emergency communicator and I'll just go ahead and admit that it is a lot heavier going then I initially anticipated. There is an awful lot to learn only some of which is radio theory and practice. I'm part way through the ARRL Emergency Communications Level I course and they have already devoted two sections to subjects like the relationship with the served agency. Some Hams have trouble with the idea that no one wants them to read messages to each other any more. The folks who need our help in order to help the actual victims want to sit down at their laptop, compose an email and expect us to get it were it needs to go. One of the best answers to limited training time is to use technologically based best practice and apply it to the problem. An emergency manager will get a lot more out of my Amateur TeleVision (ATV) signal then he / she will ever get out of my verbal description of what I'm seeing. If they use a VCR I can get a lot of windshield survey done very quickly. The people responsible for supporting the response can get a lot more information out of that video by syncing it with an APRS position record of were I was then they'd very get out of brief verbal reports. I hear some fellow Amateurs moaning that "they just want appliance operators." Cash your reality check guys that's what they've always wanted from us. It's only the sophistication of the appliances and the expectations for what is possible using them that are changing.

The Joint Commission on the Accreditation of Healthcare Organizations (JCAHO) - is now requiring that every Emergency Department ("ER") that they accredit have ham radio as a backup communications system for emergencies when other communication systems fail, and as a result, the regional hospital system at which I volunteer is using licensed staff people normally in the ER to be able to act until a volunteer or licensed off-duty staff person can respond. As long as the responding staff person is off duty, the "no pecuniary interest" test is satisfied.

We are establishing a system-wide capability of both HF and VHF/UHF ham stations at each hospital, clinic, and the Regional Emergency Command Center. During the severe storms last December, ham radio was the only link to two hospitals whose telephone, internet, cellphone, and electric services were knocked out for several days, and as a result, both medical and support staff people have been expressing an interest in getting themselves and their family members licensed, if only to be able to keep contact with their families and still be of service when needed.

As far as being a requirement for employment, let me relate a parallel situation with the commercial General Radio Telephone Operator License that happened shortly after the FCC stopped requiring that license to service land-mobile (2-way) radios. A local utility in San Francisco continued to require that their radio technicians have that license as a condition of employment (under union pressure, I understand) and someone took that to the State Labor Board, which ruled that if the FCC Rules did not require it, it was a non-job-related requirement on the part of the employer and could not be enforced. The State of California and the railroads got away with keeping the requirement because they operated marine/aviation stations at airports and bridges where the licensed-technician requirement still applied.

In sort, a ham license cannot be required for a job except as permitted under the FCC Rules. Getting the employer(s) to accept this is another story - someone must be willing (and have the deep pockets) to take it to litigation if need be.

Actually, the Association of Public-Safety Communications Officials
(APCO) does have training courses and certificates for just those
specialties, and it's up to the Comm Director to go forward with those
things and get the staff trained.

And that is fits my description of the way Ham radio for Emcomms is heading. If I was a supervisor, and in an emergency, I'm going to pick the person who works for me instead of a possibly unknown quantity.

I've headed up some works using volunteers. You have to treat them a lot differently, and many of those differences are solved by having a paid person for whom you can issue direct orders to.

As for the "off duty" business, that one is quite easy to solve. If it is a salaried employee, on and off duty time isn't always that clear anyhow.

I would be willing to wager an adult beverage that in 10 years, the hobbyist ham involved in emcomms will be completely replaced by those "off duty" professional hams. It's conjecture of course, but I've seen the beginnings of that. And your above description certainly fits.

Yeah, mostly. The issue that I see is this.

The Emcomm managers go to the school of "Just tell me what to do". Not really a bad idea. No manager should have to know the technical details of say an ATV repeater, although a little knowledge might be good, as in when the conditions prevent proper operation.

What I see as a possible problem is that as the hobbyist Hams are phased out, these technical innovations might not filter down to practice as easily. They might not be operated by people who know what to do when the wheels fall off. It's all transparent as long as we push the button on that appliance and it works. But when it doesn't??

I should probably take this moment to not that I am NOT "anti Emcomm". In fact, as my retirement comes around, I intend to volunteer as a way to pay back to the community. I'm hoping that there will be a place for the hobbyist and technically savvy Ham to do that.

but I do have some concerns.

The 'A-4 was the best of the period. The models with the Collins vernier tuning knob were the best of the best.

> The 75A-4 is the first receiver I know of that included passband
> tuning as a standard feature.

I think you're right. My 75A-3 came with a Universal Service (predecessor to today's Universal Radio) PTO mod which plugs into the NBFM socket. The Collins winged emblem was removed, a hole drilled in the spot and a long 1/4" shaft from the PBT box ran through the hole. An engraved plate was mounted on the panel and the shaft was fitted with a miniature knob. A mod for the AGC time constant was also added. The thing is nearly the equal to a 75A-4.

>> Then came the
>> intermediate styling of the tiny KWM-1 SSB transceiver.

Everybody began jumping on that band wagon. Heathkit came up with the
"poor man's S-Line"; Drake introduced the 1-A, 2-A and 2-B and TR-3;
Swan introduced monoband and multiband transceivers; Hallicrafters and
National also began producing smaller, lighter separates and transceivers.

The Lafayette HE-10, HE-30, HE-80 were Trio rigs. The Tempo One was a
Yaesu FT-100. The FT-50 and FR-50 were sold by another firm.

They did offer extras but you should look at the TS-520's receiver specs. They're dismal. The FT-101 series would have been pretty good had it not been for a flaw in leaving the noise blanker connected even when it was turned off. That's a flaw Yaesu continues to make. It is one of the problems with the FT-1000 series.

> Consider the TS-520S, for example. It did the usual 80-10 meter SSB

Yep. It served pretty well as an everyman's rig and would have been much better if the receiver section had been better design. The Japanese were not the only ones with this problem. Heath's early solid state receiver, the HW-303 was an absolute clunker in this regard.

Hammarlund made one valiant effort to stave off the JA's with the introduction of the solid state HQ-215. I have one of those and it is a pretty darned good receiver. It has an edgewise drum dial with 1 KC readout, has fixed, selectable USB/LSB and a variable BFO for CW. It has a preselector in the front end, offers AUX band positions and places for three Collins mechanical filters. The mixing scheme is the same as the S-Line and it has the same 200 KC band segments. There are input/output ports on the rear panel so that the receiver can be slaved to a 32S-whatever transmitter for transceive use. I think it was first offered about 1967.

That's quite a number of preconditions. I don't think there were any. The Heath SB-102 comes close. The Drake TR-4CW comes close (6JB6's).

>> Early Japanese suffered
>> from awful receiver performance. &#65533;

They got a lot better over the years. I ran the FR-101 with the FT-101E
for a couple of years. It did pretty well.

They've done phenomenally well. Many of the old line distributors are
just plain gone.

Agreed. I've often wondered if any of the modern gear will be
functional/repairable in forty or fifty years. My guess is that it will
not.

I know a few guys who still operate the W6TC HBR series of receivers
that they or others constructed. I also of quite a number of quality
homebrew linear amps which are still put on the air on a regular basis.

> Great stuff, high performance, no ornamentation, Sounded great on the

I'm going to use an old computer tower for a chassis/cabinet for a pair
of 4-400's I plan to build.

If you're building something small, try hobby shops. They often have
bins of both brass, copper and aluminum sheet in various thicknesses
along with round and square tubing and rod of the same materials.

Wood with a thin sheet of flashing aluminum is one way to get the shielding.

You can find a number of Heath and Drake units with really good looking
plating. I suspect that the problem units were stored in areas of high
humidity.

> What Drake and others did was to plate the chassis after all the holes

I think home plating of a large chassis would be so very time consuming
that not many would bother. It is also much easier to work aluminum
than steel. I wouldn't hesitate to break the copper plating for
modifying/repairing such equipment. A touch of lacquer on the edges
would keep air and humidity from getting to the steel.

The tempered Masonite, no doubt. The front panel of W4JBP's 1941
homebrew transmitter is of that stuff, painted black.

> Possibly. I've had some experience building speaker cabinets (clones
> of the Altec A-7 "Voice of the Theater", JBL folded horns, for
> example) and the trick is to build solid from the beginning.

I've shared the experience and still remember all of the kerfing that
went into getting those curves right. Add a 15" Electrovoice SRO
speaker (which was about 3db better than anything else on the market at
the time), top is with some massive horn tweeters and you had something.

> I've always wondered what the fascination with "antiques" is. I can

> and materials, though.

I think there a couple of classes of antique furniture items. There are those things which can only be viewed and those things which can be used. A small, antique ladies chair might not be something you could use, but an antique dining room suite or an antique sideboard can be quite utilitarian.

> The term I would use is "classic" or "timeless". Look at some Mission
> or Shaker furniture - it does not appear "antique" or dated. That's

> budget!)

I had to grin. I believe that 2x4's, 4x4's, plywood or hollow core doors will never go out of style. There's no "Captain Nemo walking into his cabin on the Nautilus" look here, but the place is attractive and utilitarian.

Hallicrafters never went for loctals in a big way; they were used only where there was no other choice at the time. Your variations-on-a-theme idea is correct; notice how similar the SX-42 and SX-62 are on the inside.

> The 'A-4 was the best of the period. The models with the Collins
> vernier tuning knob were the best of the best.

IMHO Collins made a design mistake by putting such a fast tuning rate (100 kc. per knob turn) on the 75A-4. The reduction knob fixed that.

A few years ago, a small company began manufacturing a reduction knob for the 75A-4, machined out of solid brass. Functional and attractive.

> > The 75A-4 is the first receiver I know of that included passband

> An engraved plate was mounted on the panel and the shaft was
> fitted with a miniature knob.

How did it provide PBT? The 75A-4 PBT is entirely mechanical; it works by rotating the PTO and the BFO controls simultaneously, but so that their frequencies move in opposite directions. The linearity of both oscillators is such that the received carrier frequency does not move.

>A mod for the AGC time constant was also added. The
> thing is nearly the equal to a 75A-4.

NICE!

> National also began producing smaller, lighter separates and
> transceivers.

IIRC the 1-A predated the S-line and KWM-2. It was a revolutionary design; small, light and compact at a time when even inexpensive receivers were big and heavy. Note the tiny, taller-than-it-is-wide front panel and the very deep chassis. The 1-A had passband tuning too, but it was implemented by having a tunable LC filter at the last IF. The 2-A and 2-B are excellent receivers for their price and complexity, and are prized today. But they were a dead end in one way: there was no matching transmitter that could transceive with them.

What the KWM-2 and S-line did was to make "transceiving" popular.

The KWM-1 and a few other rigs like the legendary Cosmophone (the first true full-featured HF amateur transceiver) had been the first manufactured amateur HF rigs to use the same tunable oscillator to control both the transmitter and receiver, but they did not achieve wide popularity.

Indeed, a homebrew 40 meter *CW* transceiver built around a surplus BC-453 was described in a 1954 QST, probably the first published use of the idea in amateur radio. It even had full QSK. But it was ahead of its time.

The KWM-2 and S-line took transceiving to another level. Not only were they smaller and lighter than their predecessors, they had relatively few controls. They made SSB more popular with hams by reducing the cost and size and eliminating the job of zerobeating the transmitter. Tune an SSB station correctly and the transmitter was automatically on the right frequency.

Add to this the grounded-grid linear amplifier and things really changed. High power 'phone became not only less expensive but a lot smaller and lighter. Transceivers and matched-pair separates became the new paradigm in HF ham gear; AM wasn't part of that.

Compare the Heathkit line of 1964-65 with what they were selling just 5 years earlier for just one example.

> > IMHO what turned the tide were two now-classic HF rigs:
> > the Yaesu
> > FT-101 and the Kenwood TS-520.

Well, sort of. They had QC problems and were really competition for
the likes of Swan, who did the same lots-of-watts-from-sweep-tubes
game.

> They did offer extras but you should look at the TS-520's receiver
> specs. They're dismal.

But you have to ask "compared to what?" Plus they were almost all
"solid state", which was a selling point even if performance suffered.

Agreed, but for the time and price it was decent enough. Point is,
it opened the door.

> The
> Japanese were not the only ones with this problem.
> Heath's early solid

I think you mean the SB-303. And yes it was - very sensitive but at
the cost of dynamic range.

> first
> offered about 1967.

Correct on all counts. It was meant to be a solid-state 75S-3. But never quite got there. Hallicrafters made the almost-all-solid-state FPM-300 transceiver a few years later, too.

Its drum dial inspired the Southgate Type 4 (receiver) and Type 7 (transceiver) dials. But they use all-gear-drive.

It should be remembered that there were some colossal also-rans in that period, too. B&W made their 6100 transmitter with its multiknob mixing synthesizer, obviously inspired by commercial/military sets like the R-1051. Stable but poorly adapted to amateur HF operation.

The legendary Squires Sanders SS-1R was poised to give Collins a good run for the money, but without a matching transmitter, not many hams were going to spend S-line-level dollars for it.

Some folks criticized amateurs for being "slow" to use solid-state HF rigs, but there was a reason for caution. More than one early SS rig had come to grief, like the Hallicrafters FPM-200 of the early 1960s and the EF Johnson Avenger transceiver, of which only about a dozen were made. Avenger was a decent rig but cost so much to make that EFJ never produced more, knowing they wouldn't sell. EFJ never again made an amateur HF transceiver, and was soon not making HF ham gear at all.

Central Electronics pioneered the no-tune transmitter (with all tubes!) back in the late 1950s, and was poised to market a matching receiver (the 100-R) which was reportedly as good or better than the 75S-3. But the company was bought for some patents and other contracts and was soon out of the amateur market. The sole 100-R prototype survives to this day.

OTOH, Southgate Radio is still building rigs after 40+ years...

Not really, IMHO, and they're pretty basic things, easily implemented with 1960s technology.

>I don't think there were any.

Exactly.

> The Heath SB-102 comes close.

Not really. It doesn't have RIT/XIT, and you can't easily add it.
Can't turn off the AGC nor adjust its time constant either.

> The Drake TR-4CW comes close (6JB6's).

Only if you get the model that had both RIT and the sharp filter,
which was only produced for a short time. Blink and you missed it.
Plus check the price of a TR4-CW with power supply and speaker. Ouch!

By comparison, the TS-520S had all of that and more, even if the rx
wasn't as good.

I think it will be, but in different ways:

The first way will be the renovators, who make a few good rigs from a
pile of problem sets. This is already starting to happen; look on ebay
for "TS-940" and you will see lots of parts for sale.

The second way will be the rebuilders, who will make replacement PCBs
using parts available then. A much harder go at first, but given the
automation possibilities now, who knows what the future could do.

There are folks still building HBRs today, from scratch.

But with all due respect to those designs, do check out W2LYH's
designs, such as the 23 tube receiver or the ultrastable Frankling
VFO. His construction is an art in itself; no ornamentation needed.

I often wonder what happened to his rig. I don't think I want to know.

> I also of quite a number of quality
> homebrew linear amps which are still put on the air on a regular
> basis.

Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are
pounding out the watts today, often with upgrades and modernizations.

I had a Hallicrafters SX-101 for many years - the one with the big
slide rule dial and the capability of adding a 2-meter converter (we
all ran AM in those days on 2m). It weighed quite a bit and kept the
room warm in the winter, especially when paired it up with the HT-44B,
but worked very well.

C'mon to our hospital. We have several such ham volunteers (including me) and at least two staff people that fit that very description. For the non-technical folks, we have an operations chart which says that if Channel A fails, go to Channel B and here's how you do it. It's up to us techies to make sure that those channels are available where they are needed. I look up to their medical and hospital procedural knowledge as much as they look up to our radio knowledge. I learned an awful lot during the several shifts that I pulled during the December storms.

I like the early SX-101 as it covered 160m. The later variants didn't
but one thing they did have was the oscillator tube filaments on at all
times when the rig was plugged in. That helped stability quite a bit.
I'd still like to have a 101 to pair with the HT-32B.

The SX-42 is what brought the loctals to mind. Perhaps the '43 had 'em
too. If you look at the long line of Hallicrafters stuff, the S-40 was
basically a Sky Buddy with an S-meter and an extra stage.

The CW filter I have is the 800 Hz unit. One of these days I may
replace it with an Inrad unit. I'll have to juggle things a bit to
match the modern Collins mechanical filter to the radio.

Yes. The 1-A was also a good example of the Drake copper plated
chassis. Unfortunately it was built as an SSB-only receiver. There
were no provisions for a narrow filter for CW or a wider one for AM. In
fact, the BFO could not be turned off at all. I sold a number of rigs
after coming back stateside and the Drake 1-A was one of them.

> The 1-A had passband tuning
> too, but it was implemented by having a tunable LC filter at the last
> IF.

That sort of thing was Drake stock and trade until the R-4C. The low
frequency IF filters really worked quite well in the Drake units.

> The 2-A and 2-B are excellent receivers for their price and
> complexity, and are prized today. But they were a dead end in one way:
> there was no matching transmitter that could transceive with them.

In the time when they were introduced, many folks were still using
separates. I've kept my 2-B because it really is a classic and performs
well today. The matching 2-BQ adds a lot to the receiver.

> What the KWM-2 and S-line did was to make "transceiving" popular.

Well, they made it popular for those with lots of money.

> The KWM-1 and a few other rigs like the legendary Cosmophone (the
> first true full-featured HF amateur transceiver) had been the first

If I recall correctly, there were identical-looking models with two
different power output levels.

> Indeed, a homebrew 40 meter *CW* transceiver built around a surplus
> BC-453 was described in a 1954 QST, probably the first published use

You've aroused my curiosity. I'll have to dig through the back issues
and check it out. There's a '453 lying about here somewhere.

> The KWM-2 and S-line took transceiving to another level. Not only were

> few controls. They made SSB more popular with hams by reducing the
> cost and size and eliminating the job of zerobeating the transmitter.
> Tune an SSB station correctly and the transmitter was automatically on
> the right frequency.

I have to disagree with the reduction of cost. When the KWM-2 was
introduced, my dad made a little less than $6,000 per year gross pay as
a Miami Herald reporter. That transceiver would have cost about a
quarter of a year's pay. Fast forward a bit. When I bought a Ten-Tec
Omni VI, the new cost was a small fraction of a year's pay and that rig
offered features only dreamed about at the time of the introduction of
the Collins rig. The KWM-2 was smaller and lighter but an HT-32B and an
HQ-170 would have been cheaper by hundreds of dollars.

> Add to this the grounded-grid linear amplifier and things really
> changed. High power 'phone became not only less expensive but a lot

> the new paradigm in HF ham gear; AM wasn't part of that.

There are a couple of "duh" factors buried in there for us to mull over.
It would have been possible for radio amateurs to have built and used
grounded-grid linear amps for use with AM rigs much earlier. A rig such
as the Johnson Ranger would have driven one to a KW AM input with ease.

> Compare the Heathkit line of 1964-65 with what they were selling just
> 5 years earlier for just one example.

You're right. Plated modulated AM rigs were gone from the line. You
either got a small and light SSB rig or you bought a Novice type rig
like the DX-60 with controlled carrier AM built in.

>>> IMHO what turned the tide were two now-classic HF rigs:
>>> the Yaesu
>>> FT-101 and the Kenwood TS-520.

Right, but they were rigs which helped the Japanese penetrate the U.S.
amateur radio market. One rig which we omitted was the Kenwood TS-511
which predated the '520.

>> They did offer extras but you should look at the TS-520's receiver
>> specs. They're dismal.
>
> But you have to ask "compared to what?" Plus they were almost all
> "solid state", which was a selling point even if performance suffered.

I suppose you're right, but having a reliable solid state receiver which
will perform poorly for a long, long time, doesn't seem like much of a
sales tool.

>
>>> Consider the TS-520S, for example.

>
> Correct on all counts. It was meant to be a solid-state 75S-3. But
> never quite got there.

Actually it did get there. It wasn't perfect, but it was good. The problem is that there was no matching transmitter and the receivers didn't exactly fly off the shelves.

> Hallicrafters made the almost-all-solid-state
> FPM-300 transceiver a few years later, too.

That was a loser from the git go. It offered no CW filters and didn't (I don't think) offer 1 KHz readout. I think that was after Bill Halligan sold the firm to Wilcox Gay.

> Its drum dial inspired the Southgate Type 4 (receiver) and Type 7
> (transceiver) dials. But they use all-gear-drive.

That should be quite solid.

I just checked the HQ-215 and a single turn of the tuning knob equals 15 KHz. That was respectable in its day. My Orion, as I've set it up for CW, tunes about 1.65 KHz per knob revolution. If I tap a button, the rate changes to about 6 KHz per revolution. It ratio can be set higher or lower. At the lowest step setting, one revolution provides about 65 Hz.

> It should be remembered that there were some colossal also-rans in
> that period, too. B&W made their 6100 transmitter with its multiknob
> mixing synthesizer, obviously inspired by commercial/military sets
> like the R-1051. Stable but poorly adapted to amateur HF operation.

That was a blunder. The 6100 was every bit as big and heavy as its AM/CW only 5100 and this at a time when others were moving to smaller and lighter gear.

> The legendary Squires Sanders SS-1R was poised to give Collins a good
> run for the money, but without a matching transmitter, not many hams
> were going to spend S-line-level dollars for it.

That receiver was ahead of its time, but nobody came to the party. As a result, they're very rare and bring lots of money on today's market.

> Some folks criticized amateurs for being "slow" to use solid-state HF

> an amateur HF transceiver, and was soon not making HF ham gear at all.

We can draw a comparison to those folks who lost out during the battle between Panasonic and Sony in the videotape format war. Those folks were slow to change to DVD players and are being even slower still in going HD-DVD or Blu-Ray. It appears that the Blu-Ray format is the winner and that people will begin to purchase those units as the prices come down.

> Central Electronics pioneered the no-tune transmitter (with all

I'll bet that one is worth a fortune. The 100V and 200V transmitters go for a great deal and they aren't all that rare. I've never owned one but I've had my hands on a few. The only Central Electronics gear I've owned have been 10-B's and 20A's along with their small monitor scope and a sideband receiving adapter (phasing type like the transmitters).

Well, that leaves us discussing what was built vs. what might have been
built.

>> I don't think there were any.
>
> Exactly.
>
>> The Heath SB-102 comes close.
>
> Not really. It doesn't have RIT/XIT, and you can't easily add it.

Actually, you can. I've added it to my HW-101A. The mod is applicable
to the SB-100 through SB-102. There's a single mini-toggle switch and a
pot (with matching green Heath knob) added to the upper right quadrant
of the panel. My HW-101 has an added divide by four calibrator as well
for 25 KHz markers.

> Can't turn off the AGC nor adjust its time constant either.

You could easily add a switch to implement several AGC time constants.

Yeah, I know--Heath didn't build 'em that way.

>> The Drake TR-4CW comes close (6JB6's).
>
> Only if you get the model that had both RIT and the sharp filter,
> which was only produced for a short time. Blink and you missed it.

That was the last model variant. Remember that those Drake transceiver
used *three* sweep tubes in the output for a bit more oomph. The C-Line
transmitters used a pair.

> Plus check the price of a TR4-CW with power supply and speaker. Ouch!

Guys argued with Drake for ages about the inclusion of CW filters and
RIT in the transceivers. The Drake folks couldn't understand how anyone
would need such things. Amateur radio is much more market driven today.
The lower end rigs are driven by cost and the upper end gear is driven
by DXers and contesters demanding performance.

> By comparison, the TS-520S had all of that and more, even if the rx
> wasn't as good.

DXers and contesters weren't buying them though. When Kenwood began
marketing TS-830's, TS-930's and TS-940's, the power user types began
buying them. Kenwood went really well through the TS-850's and

TS-950's, then quite building competitive rigs. The TS-2000 is a dog
with lots of bells and whistles. It does everything from DC to
daylight--poorly.

>>> Digi-Key got its start about the same time as Ten Tec - 1968

Okay. Gone are the days when you reach into bins of transistor or IC's
and expect to be able to repair much of anything. Large scale
integrations and specialty chips took care of most of that.
Kenwood rigs in particular seem to suffer. The 930's, 850's and 940's
are examples of rigs where the displays and display drivers aren't
available any longer.

>
> The second way will be the rebuilders, who will make replacement PCBs

>
> Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are
> pounding out the watts today, often with upgrades and modernizations.

Surely! Softkey circuits, inrush protection and the like have been
added or band have been added. My example of the last model in the
SB-220 line, the HL-2200 (a restyled SB-220 in brown clothing) is doing
a great job as a 6 meter only pair of 3-500Z's at about 900w output.
It has the softkey mod so that any modern transceiver can safely key the
amp.

I think the same company that made the reduction knob made exact plug-
in filters. Dunno if they made a CW one.

At the University ham shack we had two 75S-3s. One had the
200 Hz filter, aka "the ringmaster". But boy could they hear!

> > IIRC the 1-A predated the S-line and KWM-2.

> I think you'll find that all of them hit the market in '57.

The KWM-2 came after the original S-line (75S-1/32S-1) Check your old
QSTs, you'll see the 1-A advertised well before the KWM-2.

> after coming back stateside and the Drake 1-A was one of them.

1-A was Drake's entry into the ham receiver market; previously
they had only made things like lowpass filters. Their idea was to
cut the cost of SSB to the bone by making a receiver specific to
the mode and leaving out anything not needed for SSB. Hence no
diode detector, no BFO-off, no narrow filter, etc. But it had PBT,
which also gave sideband selection, an S-meter and AGC that
worked on SSB, and was very stable.

That mode-specific thing inspired many of the Southgate receivers.

Not just those folks. The idea got wide publicity and led to lots
more rigs at a lot lower prices.

IIRC the author's last name was Deane. I do not know of any earlier
HF amateur transceiver being described in QST or any other
publication.

> > The KWM-2 and S-line took transceiving to another level. Not only were

And $6000/yr gross income was solid middle class. A family of four
could live very well on $6K, 50 years ago.

What I meant was that a KWM-2 and power supply/speaker cost less than
top-of-the-line separates like a 75A-4 and HT-32B.

Or compare the price of an S-line and a KWM-2.

To get an idea of the influence of the KWM-2, google "LWM-3"...

>&#65533; Fast forward a bit. &#65533; When I bought a Ten-Tec

Agreed. But the KWM-2 put the idea of the one-box station out
there in a big way. A lot of less-expensive transceivers with
minimal controls followed. People saw the success of the KWM-2
and designed less-expensive alternatives based on the idea.

> rig such
> as the Johnson Ranger would have driven one to a KW AM input
> with ease.

Some hams did that but the big problem was the low efficiency of AM linear without the use of special circuits like the Doherty, which isn't the fastest QSY circuit.

With AM linear you only get 30-35% carrier efficiency. Which means 300-350 watts carrier at the old 1 kW legal limit. Plus your final tubes have to be able to dissipate 650-700 watts! The same results could be had from a 450-watt class plate-modulated AM rig - say, a pair of 812As modulated by a pair of 811As.

AM also required power supplies that could stand the 100% duty cycle of the mode. The low duty cycle of early unprocessed SSB rigs meant a lot of liberty could be taken in PSU design.

The end result was rigs like the NCX-3 and the SB-100, which cost as much as a good receiver but were complete 100-watt SSB stations that you could indeed set up on a card table.

When Heath introduced the SB-200 in 1954, it cost $200. Legal limit on CW, 1200 watts PEP on SSB (input). That was a lot cheaper than the equivalent AM, and would fit on the card table.

IOW, high power AM cost a lot of dough and a lot of space/weight. The SSB transceiver/GG linear paradigm drastically reduced those requirements.

Fun fact: AFAIK only two 1 kW-input-legal-limit plate-modulated AM rigs were ever made for the amateur market: the Collins KW-1 and the Johnson Desk Kilowatt. Total production was very limited - maybe 2000 units combined.

I can't begin to recall the number of models of legal-limit GG amplifiers made. EFJ Thunderbolt, SB-220, Heath KL-1...

More to come...

Remember too that in the 1970s US ham radio was growing fast. This was right after the 1968-1969 "incentive licensing" changes which some said were going to destroy amateur radio. The numbers tell a different story.

> > Hallicrafters made the almost-all-solid-state

Which brings up another point: In that time period, a number of the classic US ham radio manufacturers were losing their founders, either through sale of the company or retirements, etc.

> > Its drum dial inspired the Southgate Type 4 (receiver) and Type 7
> > (transceiver) dials. But they use all-gear-drive.

It's very solid, and so easily done that I wonder why it hasn't been done more by others. The tuning cap is from a BC-221, and there's none better anywhere.

65 Hz.

All Southgate Radio receivers from the Type 3 onward have had slow
tuning rates - typically 5 to 7 kHz per turn. That's about 1969 to the
present.

> The 6100 was every bit as big and heavy as its
> AM/CW only 5100 and this at a time when others were moving to smaller

Yes but that was the least of it. It cost almost as much as a 75S-3 or
T-4X but there was no matching rx that could transceive with it. And
while the military might have a use for those multiknob synthesizers,
for HF ham radio they're just not the thing to use.

> > The legendary Squires Sanders SS-1R ....

> That receiver was ahead of its time, but nobody came to the party. • A
s a
> result, they're very rare and bring lots of money on today's market.

Very few companies have been able to enter the ham radio market from
the top. Collins did, but they had a reputation from WW2 and before,
and more importantly had a broad base of non-ham products that paid
for much of the research. I have heard that Collins did not expect the
amateur product line to make money; its purpose was to be the best and
keep the company name in view.

About the only company besides Collins that was able to come into the
ham radio market at the top was Signal One - which didn't last.

Yep. There was also the 10A, quite rare now. Some folks claim they
were the origin of the amateur USB/LSB convention, but doing the math
shows that cannot be the case.

> > OTOH, Southgate Radio is still building rigs after 40+ years...

> Heh.

Not just rigs but power supplies, antennas, antenna tuners, test
equipment, shack furniture, cable assemblies, speakers, and more.

> Well, that leaves us discussing what was built vs. what might have been
> built.

Point is, the Japanese rigs put those features in from the get-go,
while the
American rigmakers didn't.

> > Not really. It doesn't have RIT/XIT, and you can't easily add it.
>

Yes, and they were supposed to be matched. Some folks have worked up
mods to use 6146s in those rigs.

> > Plus check the price of a TR4-CW with power supply and speaker. Ouch!
>
> Guys argued with Drake for ages about the inclusion of CW filters and

one
> would need such things.

Interesting! I always thought the reason they were left out was so
that folks would buy the separates.

> Amateur radio is much more market driven today.
> The lower end rigs are driven by cost and the upper end gear is driven

Sherwood has tested the Elecraft K3. Next issue of QST will carry a
Product Review of it too.

> > By comparison, the TS-520S had all of that and more, even if the rx
> > wasn't as good.
>
> DXers and contesters weren't buying them though.

'Course not. But they weren't the target market, either. The SB-101/
HW-101 crowd were.

I remember that towards the end of its run the HW-101 price reached
$449, which was almost double its introductory price less than a
decade earlier. That was without power supply, speaker, mike or sharp
filter. And you had to build it. FT-101/TS-520S took that market!

> When Kenwood began
> marketing TS-830's, TS-930's and TS-940's, the power user types began

There are persistent rumors that Kenwood has given up the serious
amateur market. Sad if true,

The TS-570 is also highly regarded.

> > Newark and Allied are still around.

Agreed but there will be some rigs that have other problems but good
displays.

> > The second way will be the rebuilders, who will make replacement PCBs
> > using parts available then. A much harder go at first, but given the
> > automation possibilities now, who knows what the future could do.
>
> Jim, I just can't see that being profitable.

Probably won't be. I suspect some folks will do it just for the heck
of doing it, though.

And consider: $125 for a reduction tuning knob for a receiver that
went out of production more than 45 years ago?

In the bad old days PC fabrication for homebrewing meant doing layout
work, resist, etching, drilling, etc. I've done it and got good at it.
But today you just download some freeware from a PC fabrication house,
put together a circuit, develop a layout and send it by email to the
fabricator. Prices are low for small boards and the quantity is first-
rate. Plus if a couple of hams go together, or you just want spares,
it's a no-brainer. Automated manufacturing does the work.

> > There are folks still building HBRs today, from scratch.
>
> I'd think that getting some of the parts could be really difficult.

You'd be surprised what folks have squirreled away....

In reality the only unobtanium parts are the coil forms and IF cans.
One trick is to use ARC-5 IFTs instead. But I prefer original
Southgate designs.

> > Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are

> It has the softkey mod so that any modern transceiver can safely key the
> amp.

Exactly. Many are modded for QSK as well.

Yet way back in April 1976 - 32 years ago! - the cover article in QST was for a legal-limit solid-state HF amp. When I saw it, I figured that it wouldn't be too many more years before hams wouldn't have any hollow-state in their shacks....

> doors will never go out of style.

I rip 2x4s in half lengthwise; they're all you need for most shack
furniture. Also do an offset cut that gives one piece 1-1/2" square
and another that's 2x1-1/2" from a single 2x4. Table saw makes it
easy.

I did one table with a hollow core door many years ago (it was free)
but they are too flimsy and too expensive for TSS approval now.

The shack table in the website picture was designed for Field Day use,
25 years ago. The top was the maximum size that would fit in the back
of a VW Rabbit with the rear seat taken out. All the legs and braces

are bolted on in such a way that the whole thing breaks down into one package. Does the job for now but a replacement is in the works. Maybe.

>&#65533; There's no "Captain Nemo walking into
> his cabin on the Nautilus" look here, but the place is attractive and

IMHO the true art of a hamshack is having things set up in such a way that you just want to sit down and start operating as soon as you see the place.

RADIO LAW: MD SUPREME COURT TURNS AWAY TOWER CASE - BIG WIN FOR HAM

The Maryland Supreme Court has declined to hear the case involving a set of

ham radio towers on in the town of Poolesville. That's good news for the

ham who has been fighting to keep them. Amateur Radio Newsline's Bruce Tennant, K6PZW, explains:

--

The Maryland Supreme Court has decided against being involved in the case where neighbors of John Evans, N3HBX, had sued after he obtained a permit and installed several 100 foot and higher radio towers as part of a contest

station. The neighbors claimed the installation would devalue their property and that the installation was an eyesore.

The case began back on August 30th, 2004 when neighbors of Evans antenna farm went to the Board of Appeals on Aug. 30, 2004, less than a month after

construction began on the towers. The Board dismissed the neighbors' complaint that the tower permit was issued in error in November 2004. It said that the 30 day window of opportunity to appeal the permit had passed.

The permit had been issued June 23rd, but the neighbors clain they first learned of the project when construction equipment arrived on August 5th .

Two neighbors of Evans 44 acre property, Thomas Burruss and Alan Gaunoux, filed the lawsuit in August 2004. The case eventually wound up in the Maryland Court of Appeals, which upheld the Board's original finding that

the neighbors were too late to contest the permit. It did instruct the appeals board to decide if not notifying the neighbors had denied them of their due process property rights. The board found that the neighbors did

not have any due process rights to Evans' land. This is the decision the

neighbors ultimately took to the Supreme Court.

According to the lower court findings, Evans, who said he has spent $160,000 in legal fees, was within his rights to build the towers and followed the proper procedures. The county permitted the towers as an allowable accessory use, much like a swimming pool, detached garage or shed, according to county Board of Appeals documents and other published reports. His attorney Steven Van Grack says that as a matter of law, the towers were constructed legally.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Though the Supreme Court ruling was the end of the road for the administrative case, the neighbors also filed a civil lawsuit against Evans

in Circuit Court in August 2004. Its been on hold until the administrative

case concluded. (Gazette.net)

BREAKING DX NEWS: SPRATLY ISLANDS COMING OIN THE AIR

If you have waited a ham radio lifetime to work the very elusive Spratly Islands, wait no longer. This with word that Ed Sawyer N1UR and his wife Christine, KB1PQN are expected to be active portable 9M6 from the Layang-Layang Island Resort in the Spratly Islands. This, between 0800 UTC

on , March 22nd through midnight UTC on March 30th.

The duo have already received their licenses. Once they get permission from

the Navy, they will apply for a special 9M0 callsign. Activity will be on 160 through 10 meters, on CW and SSB. 100 watts to omnidirectional verticals will be used from the near-by beach and the operators will be moving bands frequently to take advantage of changing band conditions and openings. Sunset on Spratly is 1040 UTC with sunrise at 2240 by the middle

of that week.

QSL cards for either operator go via Bob Tomkovich, Jr., K2RET, 405 Hemlock

Dr., Lanoka Harbor, NJ 08734 in the USA. More information is on line at www dot n1urspratly dot com. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

THE BPL WAR: SARL SAYS NO TO PLT / BPL

The South African Radio League will be taking a very tough stance in its fight to stop the proliferation of Broadband over Powerline Internet access

in that nation. According to a society news release, while the draft regulations for the introduction of what they call Powerline Internet Transmission or PLT go some way to protect the High Frequency radio spectrum from interference the general consensus was that the regulations do not go far enough. SARL says that interference limits, the lack of compulsory notching of the Amateur bands and the inadequate mitigation process were identified as some of the issues left open.

The decision was reached following a nationwide net on Sunday, February 24th where the draft PLT regulations and the negative impact the licensing

of Powerline Internet Transmission in South Africa will have on HF communication were discussed. The South African Radio League also received

input from experts in the field and a major assistance from the ARRL laboratory which has been dealing with BPL interference issues for several

years. (SARL)

**

RADIO LAW: FCC SAYS NO TO MORSE RECONSIDERATION REQUESTS

The FCC has said no to a pair of proposals that had asked for the restoration of Morse testing for a qualification to become and hold a United States Amateur Radio license. In a Memorandum Opinion and Order released February 28th, the FCC denied two petitions calling for General or

Amateur Extra license applicants to demonstrate proficiency in Morse code.

In the wake of the FCC's actions to do away with Morse testing, two amateurs submitted separate petitions asking the agency to bring back Morse testing. Anthony Gordon, KG6EQM, objected to the FCC eliminating the

telegraphy examination element as an examination requirement for the Amateur Extra Class operator license. Russell Ward, W4NI, requested the FCC reconsider its decision for strictly procedural reasons.

In denying both requests the FCC reiterated its prior conclusion that an individual's ability to demonstrate Morse code proficiency does not further

the underlying purposes of the Part 97 rules. It appears to be of the opinion that Morse does not accommodate individual contributions to the advancement of the radio art and to enhance the value of the amateur service to the public.

In December 2006, the FCC decided to drop the Morse code requirement for all Amateur Radio license classes. At the time the commission decided to drop the Morse Code exam, it said knowing Morse is not necessarily

indicative of an individual's ability to contribute to the advancement of ham radio. The agency also said emergency communication today is performed using voice, data or video modes. The agency claims that all of these are much faster than telegraphy.

The FCC said it received roughly 100 comments on the reconsideration request. It says that most were overwhelmingly negative. (RW, ARRL, FCC)

**

RESCUE RADIO: MARYLAND SENIORS FORM FIRST RESPONSE TEAM

A story in the March 5th edition of Hometown Annapolis dot com proves that you do not have to be young to be an emergency planner. A story titled Heritage Harbour's Detailed Plans Impress County Officials tells the story of how senior citizens in a planned Maryland community have put together a first response unit that includes everything from stockpiling food and medical supplies to communicating with the world using Amateur Radio.

In this case the communications hub is the garage of Heritage Harbour resident Walter Van Gieson, AB4DQ. Van Gieson was a radio operator who served in the military during World War II. According to the news article, in the event a disaster severs power and phone lines, AB4DQ's ham radio will become the lifeline out of Heritage Harbor.

The complete story is truly uplifting example of how those in their 70's and 80's and beyond can provide a valuable service to their communities. You can read all about the Heritage Harbour first response team at
www.hometownannapolis.com/cgi-bin/read/2008/03_02-14/TOP
(HometownAnnapolis.com)

RESCUE RADIO: WISCONSIN HAMS HELP SAVE DRIVER WHO RAN OFF THE ROAD

A pair of Wisconsin hams are being lauded for their quick action that likely saved an injured drivers life. We have more from Amateur Radio Newsline's Don Carlson, KQ6FM:

--

It happened on Wednesday, February 27th. That's when Robert Stout, WB9ECK,
put out a call for assistance on the Madison 147.150 two meter repeater and

was answered by Brian Sprecher, KC9LCC,. Stout told Sprecher that a car had

gone off the road, broken through a guard rail and stopped just short of a

creek. Stout aid that the driver was injured and trapped in his vehicle. He asked KC9LLC to inform authorities that an ambulance was needed at the scene.

Sprecher then put in a call to the county sheriff's office and relayed the

assistance call. Stout then kept Sprecher apprised of the driver's injuries. KC9LLC used the information to give the sheriff's dispatch updated real time information.

Stout remained at the scene providing aid until local police arrived. Sprecher stayed on the air relaying information from Stout to the

local authorities until they relieved him of duty and sent him on his way.

For the amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.

--

The identity of the victim and his medical condition were not known as this

newscast goes to air. (KC9GM, others)

**

RESCUE RADIO: CALIFORNIA HONORS DCS VOLUNTEERS

Twenty seven Los Angeles area hams who are members of the Carson Sheriff Station Disaster Communications Service have been honored for their work on

behalf of the community. All received individual and group awards from for

their taking part in a wide range of emergency and public service episodes

including assisting in providing assistance during tactical alerts due to civil unrest. The hams were also lauded for their work during the massive

wildfires that plagued the region last fall.

In expressing support to the volunteers a proclamation was issued. It said

in part that together local ham radio operators provided 7986 hours of service to the agencies. Also that the service provided by the Carson Station Disaster Communications Service volunteers has so far saved the taxpayers of Los Angeles County almost $320,000.

The Carson Station Disaster Communications Service is a volunteers group of radio amateurs who volunteer to provide communication links in the event

that more traditional communication systems are disabled due to natural or

manmade disasters. In addition to the 27 radio amateurs, thirteen deputies, a firefighter, two station volunteers and two citizens were also

recognized at the presentation event. (ARNewsline(tm) from LA Sheriff's Press
Release)

**

ENFORCEMENT: GOVERNMENT SILENCE LEADS TO FIGHT BACK WEBSITES

A new twist on the ham radio regulatory enforcement scene in the United States. This, as some radio amateurs accused of wrong doing by the Federal

Communications Commission take to the World Wide Web to plead their case or denounce the regulatory agency as interfering with their right to free speech.

In the wake of a recent FCC announcement that only final actions in ham radio matters would be made public, some hams accused of Part 97 infractions are taking their story public with websites and on-line blogs of their own. The reason seems to be to let the ham radio public know that they intend to fight the government accusations made against them.

Back on January 15th the FCC announced that due to privacy concerns that it

was dramatically scaling back the amount of information it would make public in regard to it Amateur Service enforcement actions. Up until then

it had been common practice for the agency to release letters to individuals that require a specific response to an allegation of wrong doing, Now the only information made public are Notices of Violation, Notices of Apparent Liability to Monetary Forfeiture and other final actions in a given case.

But in a strange turn of events, this new FCC posture to protect the identifies of those accused has lead at least two or three such people to create cyberspace homes. Places on the web where they have posted the violation notices that they received along with their respective views or responses.

The reason that these sites and blogs appearing is unclear since one would

think that most hams who receive letters of inquiry regarding their on-the-air operating practices would tend to want to keep the matter quiet

and settle the issue well out of the public eye. It will be interesting to

see how many more of these sites show up as ham radio rules enforcement continues and some on the receiving end of FCC notices going public to fight back. (ARNewsline(tm), others)

**

ENFORCEMENT: AMBULANCE COMPANY FINED FOR OPERATING ON AN UNAUTHORIZED FREQUENCY

Even first responders have to comply with the FCC rules as an Oregon company found out recently. The FCC affirms a $3200 monetary against Metro

West Ambulance licensee of station WQBI492, in Hillsboro, Oregon. This, for willful and repeated violation of Section 1.903(a) of the Commission's

Rules by operating on a frequency not authorized for it to use.

On June 11, 2007, the Enforcement Bureau's Portland Resident Agent Office

issued a Notice of Apparent Liability for Forfeiture in the amount of $4,000 to Metro West after determining that the company apparently willfully and repeatedly operated on 463.2875 MHz. This is a frequency not

authorized by its license. Metro West replied to the NAL on July 2, 2007.

In its response the company disputed some of the facts, arguing that the violation was not willful and not repeated, that Metro West took immediate

steps to rectify the situation as soon as it was aware of the violation, and that Metro West has a history of compliance with the Commission's Rules.

In affirming its action, the FCC said that the Communications Act defines "repeated" as "the commission or omission of such act more than once or, if
such commission or omission is continuous, for more than one day. It says

that in this case, the evidence is clear that Metro West operated its station on 463.2875 MHz for more than one day. Therefore, it finds no merit to that argument.

It did however agree that Metro West did have a history of overall compliance with the Commission's Rules. Based on this the FCC did reduce

Metro West's forfeiture amount from $4,000 to $3,200.

Metro West was given the customary 30 days to pay or to file a further appeal. (FCC)

**

HAM FREEWARE: WORKEDGRIDS FROM VE2ZAZ

Bertrand Zauhar, VE2ZAZ, has released his new freeware WorkedGrids, ham log

grid square mapping software. The program runs only under Windows. It displays a map showing the amateur radio grid squares contacted and logged

in using third-party logging program. Up to four bands can be displayed concurrently on the map. The program reads plain-text ASCII log files generated by most logging programs. WorkedGrids is directed towards the VHF and above operators who collect grid squares for contesting or award purposes. More is on-line at ve2zaz.net (ANS, VE2ZAZ)

**

NAMES IN THE NEWS: RAC ELECTS TWO NEW VP'S

Some names in the news. First up is Jim Hay, VE2VE. Hay has been elected

as Radio Amateur of Canada's Vice-President, for Technical and Administrative Services. This confirms his recent assumption of responsibilities for the organizations information technology requirements.

And John Bartlett, VE1OZ, has been elected as Radio Amateur of Canada's Vice-President for Public Relations. His job is to lead efforts to develop

strategies to improve membership across Canada and to promote Amateur Radio

to the Canadian public. (RAC)

**

NAMES IN THE NEWS: VK2AMD TURNS 100

And words of congratulations to Australian operator Howard Booth, VK2AMD who turned 100 years of age on March 6th. Originally licensed as G2AS of Sheffield England, Booth and his then young family emigrated to Australia

after the bad winters of the late 1940's, settling in Windang, NSW, some 60

miles south of Sydney. Booth, who was a builder and roofer in the U-K built his own house and still lives in it today. He is believed to be one

of the oldest or even the oldest active radio amateur on the Australian continent and possibly world-wide. (WIA)

**

THE SOCIAL SCENE: QCWA AT STUART FLORIDA HAMFEST - MARCH 15

Ken Simpson, W8EK, says that the Quarter Century Wireless Association will

hold an open forum at the Stuart Florida Hamfest. The date of the event is

Saturday, March 15th at 11:30 a.m. Eastern Standard Time. The venue is meeting room 2 at the Martin County Fairgrounds in Stuart. More information about the hamfest is on line at www.mcaraweb.com (QCWA)

**

THE SOCIAL SCENE: CHARLESTON HAMFEST - MARCH 15

And the 24th annual Charleston West Virginia Hamfest also takes place on Saturday March 15th. Its venue is the Coonskin Armory at 1707 Coonskin Drive in Charleston. Talk in is on the W8CHF 145.35 MHz repeater. For more information please contact our own Jim Damron. His e-mail is N8TMW at

arrl dot net. (N8TMW)

**

THE SOCIAL SCENE: MICROHAMS DIGITAL SEMINAR - MARCH 22

The second annual MicroHAMS Digital Seminar is slated for Saturday, March 22nd on the Microsoft campus in Redmond, Washington. The program includes

a wide variety of topics centered around digital communications and Amateur

radio. Lunch and snacks are included with the price of the conference and

there will be free Internet access. Because of space limitations and parking requirements pre-registering is suggested, More is on line http://www.microhams.com/digitalconference (W7LRD, ANS)

HAM HONORS: 2008 YHOTY NOMINATIONS BEING SOUGHT

In case you have not heard the announcement at the end of the newscast the

past few weeks, the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation.

Any FCC or Industry Canada licensed radio amateur, age 18 or younger, residing in the United States 50 states, plus Puerto Rico and the Canadian

Provinces is eligible to be nominated for this award. To obtain a nominating form, send a self-addressed, stamped envelope to 2008 Young Ham

of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, California, 91350, or download the form from www dot yhoty dot org. Nominations may be electronically submitted at the website, but supporting materials must be submitted separately.

Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. Again, more information is in cyberspace at

our special website at www.yhoty.org. (ARNewsline(tm))

EMERGING TECHNOLOGY: GERMAN PUBLIC RADIO TO ABANDON EUREKA 147

A once prominent digital audio broadcasting format soon could be a technical achievement of the past in one European nation. This, as an oversight organization in Germany says its time to stop supporting Eureka

147. Jim Damron, N8TMW, has the details:

--

The organization responsible for setting fiscal policy for public broadcasting in Germany has deemed the Eureka-147 Digital Audio Broadcasting codec unworthy of further investment. The KEF which oversees

the financial aspect of DAB is calling for the equivalent of about $246 million slated to fund public-service DAB projects from 2009 to 2012 to be

reallocated to other projects.

Since 2001, some $266 million has been allocated to KEF for Digital Audio Broadcasting projects. In explaining its recommendation to halt such funding after 2008, KEF said that receiver options remained limited in Germany and that public support for FM radio and the availability of satellite radio, Internet radio, podcasts and other outlets have changed the nature of radio broadcasting since DAB was first envisioned.

I'm Jim Damron, N8TMW.

--

But there is some strong opposition to such a phase out. A group called the Initiative Marketing Digital Radio is a European consortium of receiver

manufacturers, transmitter network operators, program providers and institutions backing the DAB standard. It warns that Germany moving away from Eureka 147 could cause chaos. It says this is because the digitalization of broadcasting is unstoppable. (RW)

WORLDBEAT - UK: BBC CLOSES SHORTWAVE TO EUROPE

The British Broadcasting Company has announced that all its shortwave radio

transmissions to Europe ceased on 18th February 2008. The U-K based broadcaster says that it recognize that this will be a loss to some of their listeners, its managers point out that BBC World Service radio programs are delivered to Europe via other platforms including longwave at night.

The BBC's World Service grew from the original British Empire Service which

was inaugurated in 1932. Last year the BBC celebrated its 75th anniversary

and today boasts an estimated world audience of some 180 million.

According to the announcement, only the analog shortwave transmissions to Europe are affected. The experimental Digital Radio Mondiale or D-R-M transmissions for North East continental Europe will continue

unaffected. Full details of World Service sound broadcasts can be found on

the web at bbc.co.uk/worldservice. (GB2RS)

HAM RADIO IN SPACE: AMSAT 2007 SYMPOSIUM DVD RELEASED

AMSAT North America has released its long awaited 2007 AMSAT Symposium DVD. The DVD contains all of the 2007 papers, PowerPoint slide show and audio of the presentations. Additional features include Symposium papers from 2004 and 2005, an International Space Station Columbus module video and much more.

This DVD is a must for anyone that was not able to attend the 2007 AMSAT Symposium or as a club meeting presentation. For pricing or to order a copy please contact Martha Sargovitz at the AMSAT office at telephone area

code 301 589-6062. (ANS)

DX

In DX, NZ5N reports that he will be operating the satellites during the upcoming Swan Island Dxpedition as HQ8R from March 15th to the 23rd. Bill

will be taking along an FT-817 and an Arrow antenna to work the birds. Time permitting, he will also try to make a few contacts before and

after the expedition from the Honduran mainland. Weather permitting, he may

also try to give out grid square EK 76 from the boat on the way to and from

the island. QSL as directed by the operator.

The 2007 Equatorial Guinea 3C7Y DXpedition to has been approved for DXCC credit. If you had cards rejected for this operation, please send an e-mail to the ARRL's DXCC Desk to have your record updated.

Beginning on Sunday the 9th of March, a week-long expedition will operate from
various castles and forts on the Isle of Man. Club calls GT4KPT, GT8LED and GT3GWB will used. They expect to activate several Worked All

Britain areas during the week.

And G3RWF is active from Uganda as 5X1NH until March 22nd. His operation will be limited because he is on holiday but he expects to operate all of the High Frequency bands except 160 meters. Modes will be CW, SSB, RTTY and PSK. He will run 100 watts to wire antennas. QSL to G3RWF.

Last but by no mean least, F8CHM will be active as FR5EZ from Reunion Island until March 21st. He expects to be active on the High Frequency bands
as well as 6 meters on CW and SSB. QSL to his callbook address.

(Above from various DX news sources)

**

THAT FINAL ITEM: LIGHTNING AND ICE FOR SALE

And finally this week, a company that hams and broadcasters have come to rely on for lightning protection devices is up for sale. Its up for sale on eBay. The company is Industrial Communication Engineers. Its located in Indianapolis, Indiana here in the U-S-A and that's where you will also

find Amateur Radio Newsline's Jack Parker, W8ISH:

--

Better up that limit on your Pay Pal account. This business opportunity could cost you a pretty penny. Long time amateur radio operator Mike Koss

W9SU is hanging up his test leads and putting his company on the eBay auction block. Going price is a cool 2-point-7 million dollars. Koss has

spent the past 18 years building up his electronic products business. So why auction the business on eBay?

SOT: "eBay is one way you can advertise anything including a
business. And there are
And it can be seen by the entire world. The total cost of the ad on eBay was 14-dollars".

This may be the first time an electronics manufacturer has been auctioned on eBay. For 2-point-seven-mil, Koss says you get a large product and parts inventory, circuit designs, established customer base, 800 number and

two new patents for electro-magnetic pulse and nuclear electro-pulse arrestors that have not yet been marketed.

So if lightning strikes and he gets an offer, what is this 40 year veteran

of amateur radio going to do now?
Koss: "Becoming somewhat of a semi-professional DXer has always been kind

of a keen interest. Ah, go back and sort of be a kid again",
Mike's world class ham radio station includes six tall towers that make great lightning rods. Its all protected by his patented lightning

protection equipment. It's that ham station that Koss would like to spend

more time operating. He says the stress of running a business and getting

gray hair lead to his decision to auction the business on eBay and enjoy retirement.

Koss: "I'll probably travel a little bit because I haven't done very much
of that in my lifetime and I'd like to write a book".

Koss says the book would detail the finite science of tower installation, lightning protection and proper grounding techniques. It could be a golden idea that earns him enough pocket change to enjoy the best of amateur radio and his well earned retirement.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

Amateur Radio operators world-wide depend on Industrial Communication Engineers lightning protection equipment to keep their stations safe from Mother Nature. Many hope that Mike Koss, W9SU, is successful in finding someone to keep it going for many years to come while permitting him a lot

more time on the radio. (ARNewsline(tm), W9IND)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the

RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can

also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008

Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is

eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> ARRL "ANTENNA EXPERT" TO RETIRE

R. Dean Straw, N6BV, best known to Amateur Radio operators as the "ARRL
antenna expert," has announced his retirement, effective March 31.
Straw's main responsibility at ARRL has been shepherding and shaping
"The ARRL Antenna Book" since he took over as editor in 1993 from Jerry
Hall, K1TD.

"Jerry was one of my Elmers in Hawaii back in the early 1960s. He had
been the editor of "The Antenna Book" for many years, and when he
decided to retire he suggested I put my name in for the position of
```

editor," Straw said. "At that time, I had been in the marine electronics industry for more than 20 years and I wanted to 'give something back' to this great hobby we call Amateur Radio. Now, looking back, it's been a gratifying 15 years that I've been privileged to work at ARRL."

While at ARRL, Straw specialized in antennas, transmission lines and propagation. "I have been able to utilize my training as an electronics engineer in other areas where I could help out. I've enjoyed being associated with some remarkable people at ARRL -- folks who are truly dedicated not only to preserving the legacy of Amateur Radio, but to taking Amateur Radio forward in the 21st century."

In his 15 year tenure at ARRL, Straw served as Senior Assistant Technical Editor in the Publications Group. He was Editor of "The ARRL Antenna Book" for five Editions (17th-21st Editions), Editor of "The ARRL Antenna Compendium" series (Volumes 4-7), as well as several editions of "The ARRL Handbook." He was co-author of "Simple and Fun Antennas for Hams" with Chuck Hutchinson, K8CH.

A frequent contributor to QST (he most recently served as the handling editor for the "Hints & Kinks" column) and NCJ, Straw has also been Editor of numerous ARRL books: "ON4UN's Low-Band DXing" (4th Edition), "Low-Profile Amateur Radio," "The ARRL DXCC Handbook," "DXing on the Edge," "Amateur Radio on the Move," "Antenna Zoning for the Radio Amateur" and the ARRL Continuing Education "Antenna Modeling" course.

ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, said, "Back when I first joined the HQ staff, Dean Straw was the man who introduced me to the wonders of ladder line. Before I encountered Dean, I had never heard of ladder line, and I had no idea that this strange-looking feedline could be used with an antenna tuner, giving multiband HF operation with one ordinary wire dipole. Needless to say, it worked -- Dean has been my antenna Elmer ever since. Through all his books and QST articles over the years, Dean has fulfilled the same Elmer role for many. He will be greatly missed."

Straw said, "The Lord has been good to me -- how many people can truly say that their vocation has been their beloved avocation too? My wife has consistently maintained over the years: 'You're having entirely too much fun in this job!'"

==> ARRL ANNOUNCES COLVIN AWARD RECIPIENTS

The ARRL has granted Colvin Awards to three 2008 DXpeditions: The recently completed VP6DX Ducie Island DXpedition <http://ducie2008.dl1mgb.com/index.php> and the upcoming operations from the TX5C DXpedition to Clipperton Island <http://www.clipperton2008.org/> and the 9X0R DXpedition to Rwanda <http://www.9x0r.com/>. These three DXCC entities appear high-up on the most-wanted lists.

The VP6DX DXpedition was on the air from February 11-27. Carsten Esch, DL6LAU, and Eric Scace, K3NA, led the 13-member team to the small island

540 kilometers east of Pitcairn Island in the South Pacific. This DXpedition made 183,686 contacts, the largest number of contacts made by any radio DXpedition. The previous record had been held since February 2001 by the Five Star DX Association's DXpedition to the Comoros Island, D68C. Ducie Island was ranked as #25 on the DXCC list of most-wanted entities.

The VP6DX DXpedition broke many other records, including:
* The largest number of RTTY contacts, previously held by the Swains Island N8S DXpedition in April 2007.
* The largest number of SSB (voice) contacts, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts on 40 meters, previously held by the Libya 5A7A DXpedition in November 2006.
* The largest number of contacts on 30 meters, previously held by the St Brandon Island 3B7C DXpedition in September 2007.
* The largest number of contacts on 17 meters, previously held by the Swains Island N8S DXpedition.
* The largest number of contacts with North America, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts with South America, previously held by the Peter I Island 3Y0X DXpedition in February 2006.
* The largest number of contacts with Africa, previously held by the Rodrigues Island 3B9C DXpedition in March-April 2004.

An overseas possession of France, Clipperton Island is a coral atoll in the North Pacific. About nine square kilometers, it lies southwest of Mexico and west of Costa Rica and has no permanent inhabitants. Bob Grimmick, N6OX, will lead an international team of 21 amateurs to the atoll for a DXpedition set to begin March 7 for 10 days. Clipperton currently ranks as #21 on the DXCC list of most-wanted entities. Logs will be uploaded to Logbook of the World <http://www.arrl.org/lotw/> once TX5C's official log has been certified.

TX5C plans to operate on 6-160 meters: "We will nearly always be working split and will regularly announce our listening frequencies. Our goal is to make over 100,000 QSOs and will pay special attention to working some of the more difficult areas like Europe and the Middle East." The TX5C bandplan is available at <http://www.clipperton2008.org/dxpedition/bandplan.htm>.

An important goal of the TX5C DXpedition is furthering the knowledge of Clipperton and its ecosystem. As part of the application for the landing permit, the TX5C team agreed that certain scientific studies would be performed during their stay on the atoll, such as setting up a weather station, recording tide times and observation of native bird species. These studies will be conducted under the auspices of Christian Jost, director of the Geographical Research Center of Paul Verlaine University in Metz.

Antonio Gonzalez, EA5RM, will lead a 13-member team to Rwanda, a small landlocked country in the Great Lakes region of east-central Africa. The

9X0R team plans to be on the air from March 16-27. They will operate on 10-160 meters on CW, SSB and digital modes. Rwanda has not been on the air since late 1997 and currently ranks as #45 on the DXCC list of most-wanted entities. The 9X0R bandplan is available at <http://www.9x0r.com/operation/>.

Gonzalez said the Rwanda Utilities Regulatory Agency (RURA) is trying to establish rules regarding Amateur Radio in Rwanda: "Right now there is not an easy way to get an Amateur Radio license here, but in a few months things should be different and ham radio activities will start to be more usual from this country."

According to Gonzalez, a group of Rwandan amateurs, with the help of RURA, are trying to establish the Rwanda Amateur Radio Union (RARU) as the national Amateur Radio society in that country. He said that the RARU will be applying for membership in the International Amateur Radio Union (IARU) soon.

The Colvin Award was established in 1994 with the proceeds of a life insurance policy purchased by renowned DXer Lloyd Colvin, W6KG (SK), naming the League as beneficiary. The award is conferred in the form of grants in support of Amateur Radio projects that promote international goodwill in the field of DX. The awards guidelines favor multi-national teams with strong ethics and good QSLing policies including the use of Logbook of the World. From the 1960s into the early 1990s, Lloyd Colvin and his wife Iris, W6QL, activated more than 100 DXCC entities. Lloyd Colvin died in 1993 and Iris Colvin in 1998.

==> ARRL SOLICITING NOMINATIONS FOR 2007 HIRAM PERCY MAXIM AWARD

The ARRL invites nominations for the 2007 Hiram Percy Maxim (HPM) Memorial Award <http://www.arrl.org/FandES/field/awards/hpm.html>. The League's premier youth recognition, the HPM Memorial Award goes annually to a radio amateur under age 21 in recognition of the recipient's accomplishments and contributions "of the most exemplary nature" to both the Amateur Radio community and the local community during the previous calendar year -- 2007 in this instance.

Nomination criteria may include:

* Participation or leadership in organizational affairs at the local or national level (for example, local radio club, ARES, net control, participation in civic groups).
* Technical achievement (building radios, putting up an antenna and such).
* Operating record (for example, nets, disaster drills, contests, ARRL November Sweepstakes, etc).
* Recruitment and training of new amateurs (for example, helped teach a license class, JOTA, etc).
* Public relations activities (for example, create a ham radio Web page).

To nominate a deserving candidate, submit a completed nomination form <http://www.arrl.org/FandES/field/awards/hpm.html> to your ARRL Section Manager (SM), along with any supporting information and endorsements of ARRL-affiliated clubs and elected or appointed League officials. SMs make the formal nominations. There is no limit to the number of nominations an individual or club may submit to an SM, and SMs may nominate more than one individual. SMs need to have all information in sufficient time to submit a formal nomination to ARRL Headquarters by March 31. A list of SMs is available on page 16 of any issue of QST or on the ARRL Web site <http://www.arrl.org/FandES/field/org/smlist.html>.

Nomination forms and supporting information should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. ARRL must receive all supporting documentation by April 15. An award panel reviews the nominations and selects the winner.

HPM Memorial Award winners receive a cash award of $1500 and an engraved plaque. For more information, contact Steve Ewald, WV1X <wv1x@arrl.org>, tel 860-594-0265.

==> APRIL QST ON THE WAY TO YOUR MAILBOX

The April issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Larry Scheff, W4QEJ, discusses what you need to do to protect your house -- and your shack -- from a lightning strike in "Lightning: Understand it or Suffer the Consequences -- Part 2." ARRL News Editor S. Khrystyne Keane, K1SFA, takes a look at the first 2008 meeting of the ARRL Board of Directors in her article "ARRL Board Authorizes New Section Positions, Adopts Budget, More, at 2008 Annual Meeting." Paul Pescitelli, K4UJ, and Tom Harwell, N4XP, take readers to a coral reef in the South China Sea in their cover article, "The 2007 DXpedition to Scarborough Reef."

In his monthly column "This Month in Contesting," ARRL Contest Branch Manager Sean Kutzko, KX9X, talks about how those new to radiosport can get their feet wet. He gives his picks for the best contests for those wanting to try out contesting for the first time, especially those new to the digital modes. Read about the results of the 2007 ARRL International EME Competition and go ahead and start planning for the 2008 IARU HF Championship, scheduled for July 12-13. Find out about other upcoming contests in this month's Contest Corral.

ARRL Technical Advisor Bruce Prior, N7RR, reviews the Elecraft K3 HF/6 Meter Transceiver. According to the ARRL Lab test results, "Elecraft's K3/10 modular kit is easy and enjoyable to assemble. Once built, you're rewarded with a feature-laden transceiver with receiver performance rivaling the best available at any price. You can customize your radio with a wide range of options at any time as your interests and needs

change." ARRL Product Contributing Editor Howard Robins, W1HSR, reviews the Kenwood TH-D7A(G) Dual Band Handheld, saying this radio "is a full-featured dual band handheld that works well, is easy to use and expands on the original model's APRS capabilities."

Of course, there are the usual columns you know and love in the April QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. Look for your April issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> NEW EDITION OF "ARRL INSTRUCTOR'S MANUAL" NOW AVAILABLE

The fourth edition of the "ARRL Instructor's Manual" <http://www.arrl.org/catalog/?item=1263> is designed to coordinate classroom instruction with the current ARRL student manuals for Technician and General Class licensing, "The ARRL Ham Radio License Manual" and "The ARRL General Class License Manual."

The lesson plans and instructional PowerPoint presentations in the new edition of the Instructor's Manual have been developed by ARRL Education & Technology Program Manager Mark Spencer, WA8SME, and are intended to provide an outline for instruction. Instructors can customize these lesson plans and materials to fit their course format, addressing the needs of a particular audience.

ARRL Education Services Manager Debra Johnson, K1DMJ, said, "We encourage instructors to think of the provided PowerPoint presentations, along with our instruction materials, as teaching aids -- one tool among many in your instructional toolbox." Get your copy today at the ARRL Online Store <http://www.arrl.org/catalog/>.

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Amanda F. Spenlinhauer, KB1CQX, of Wells, Maine, reminding her that "the trustees of the N1KMA, N1VAR, KQ1L and the repeaters operating under the WA1ARN call sign have requested in writing that you refrain from use of the repeater." These requests, the Commission, noted, were due to Spenlinhauer's "failure to follow operational rules set forth by the licensee/control operators of the repeater system for its users and FCC rules." Spenlinhauer had been issued verbal requests to refrain from using the repeaters in the past, but she has, according to the Warning Notices, "apparently ignored both verbal and written requests."

Warned that the FCC would initiate enforcement action against her license -- which can include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [she] may operate KB1CQX" -- Spenlinhauer was informed by the Commission that she was "expect[ed] to abide by the request to stay off the repeater systems

and any other such request by a repeater licensee, control operator or trustee." Fines normally range from $7500-$10,000.

Hollingsworth also pointed out that Spenlinhauer's Amateur Radio license was set to expire on April 7, 2008. "Please be advised," Hollingsworth said, "that your license will not be routinely renewed unless this matter is resolved."

Hollingsworth also sent a an inquiry into interference from a Part 15 device to a licensee in Holmen, Wisconsin, and a Warning Notice concerning interference on 10 meters from an unlicensed station in Harmony, North Carolina. Two cases were opened by the Commission regarding unlicensed transmissions on non-amateur frequencies by amateur licensees in Zebulon and Pikeville, North Carolina. The Appalachian Power Company in Charleston, West Virginia also received a letter from the FCC regarding radio frequency interference from power line hardware to an Amateur Radio licensee.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division

==>SOLAR UPDATE

Tad "When the flush of a new-born Sun fell first on Eden's green and gold" Cook, K7RA, this week reports: Following five days of no sunspots, we saw one (number 984) on March 5 and 6, but it is fading off the west limb of the Earth-facing portion of the Sun. Solar activity is still very low. Sunspot numbers for February 28-March 5 were 12, 0, 0, 0, 0, 0 and 13 with a mean of 3.6. The 10.7 cm flux was 70, 69.8, 68.6, 69.2, 68.4, 68.3 and 69.3 with a mean of 69.1. Estimated planetary A indices were 22, 27, 19, 8, 5, 4 and 8 with a mean of 13.3. Estimated mid-latitude A indices were 17, 18, 13, 8, 4, 3 and 7, with a mean of 10. For next week, NOAA and the US Air Force predict planetary A index of 5, 15, 15, 10, 10, 15 and 10 for March 7-13. Geophysical Institute Prague predicts unsettled to active conditions March 7, active geomagnetic conditions March 8 and unsettled conditions March 9-13. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is March 7. The AGCW QRP Contest and SOC Marathon Sprint are March 8. The RSGB Commonwealth Contest, the Oklahoma QSO Party, the EA PSK31 Contest and the Idaho QSO Party are March 8-9. The North American Sprint (RTTY), the SKCC Weekend Sprintathon, the UBA Spring Contest (CW) and the NSARA Contest are March 9. The Wisconsin QSO Party is March 9-10 and the CLARA

and Family HF Contest is March 11-12. The RSGB 80 Meter Club Championship (CW) is March 12. Next weekend, the NCCC Sprint is March 14. The AGCW VHF/UHF Contest, Feld Hell Sprint and the 10-10 International Mobile Contest are on March 15. The Russian DX Contest is March 15-16 and the Virginia QSO Party is March 15-17. The UBA Spring Contest (6 meters) and the 9K 15 Meter Contest are both March 16. On March 17, look for the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are scheduled for March 20. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March, 9, 2008, for these online course sessions beginning on Friday, March, 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Larry Scheff, W4QEJ, Wins February QST Cover Plaque Award: The winner of the QST Cover Plaque Award for February is Larry Scheff, W4QEJ, for his article "Lightning: Understand It or Suffer the Consequences -- Part 1." Congratulations, Larry! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the March issue by Monday, March 31.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on Friday, March 21. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, March 20; there will be no "ARRL Audio News" that week. ARRL Headquarters will reopen Monday, March 24 at 8 AM Eastern Daylight Time. We wish everyone a safe and

enjoyable holiday weekend.

* Nominations Invited for 2008 Young Ham of the Year Award: Nominations are now being accepted for the 2008 Amateur Radio Newsline Young Ham of the Year (YHOTY) Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation. This year, nominations are being accepted for Amateur Radio operators living in the US, Puerto Rico and the 10 Canadian provinces. Nominations and supporting materials must be submitted before May 30, 2008, on an official application. To obtain a nomination form, send a self-addressed, stamped envelope to 2006 Young Ham of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, CA 91350, or download the form from the Internet <http://www.yhoty.org/pdf/YHOTY_2008_Nomination_Form.pdf>. Nominations may electronically submitted using a Web form <http://www.yhoty.org/nomination-form.htm>, but supporting materials must be submitted separately. Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. There's more information on the YHOTY Web site <http://www.yhoty.org/>.

* ARRL DXCC Desk Approves 3C7Y Operation: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2007 3C7Y DXpedition to Equatorial Guinea has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

* Daylight Saving Time Begins this Weekend: Don't forget to set your clocks ahead one hour -- daylight saving time begins Sunday, March 9 at 2 AM local time.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Amateur Radio Newsline(tm) Report 1595 - March 7, 2008 (REVISED)

Amateur Radio Newsline report number 1595 with a release date of Friday,
March 7th, 2008 to follow in 5-4-3-2-1.

A big win for a Maryland ham as the states Supreme Court turns away a
neighbors appeal in a tower case; the FCC says that Morse testing will not

return and a ham who wants to retire has his business foe sale on
eBay. Why eBay you ask? Find out on Amateur Radio Newsline(tm) report
number 1595 coming your way right now.

(Billboard Cart Here)

RADIO LAW: SUPREME COURT TURNS AWAY TOWER CASE - BIG WIN FOR HAM

The Supreme Court has declined to hear the case involving a set of ham
radio towers on in the town of Poolesville. That's good news for the ham

who has been fighting to keep them. Amateur Radio Newsline's Bruce
Tennant, K6PZW, explains:

--

The Supreme Court has decided against being involved in the case where
neighbors of John Evans, N3HBX, had sued after he obtained a permit and
installed several 100 foot and higher radio towers as part of a contest
station. The neighbors claimed the installation would devalue their
property and that the installation was an eyesore.

The case began back on August 30th, 2004 when neighbors of Evans antenna
farm went to the Board of Appeals on Aug. 30, 2004, less than a month after

construction began on the towers. The Board dismissed the neighbors'
complaint that the tower permit was issued in error in November 2004. It

said that the 30 day window of opportunity to appeal the permit had passed.

The permit had been issued June 23rd, but the neighbors claim they first learned of the project when construction equipment arrived on August 5th .

Two neighbors of Evans 44 acre property, Thomas Burruss and Alan Gaunoux, filed the lawsuit in August 2004. The case eventually wound up in the Maryland Court of Appeals, which upheld the Board's original finding that

the neighbors were too late to contest the permit. It did instruct the appeals board to decide if not notifying the neighbors had denied them of their due process property rights. The board found that the neighbors did

not have any due process rights to Evans' land. This is the decision the

neighbors ultimately took to the Supreme Court.

According to the lower court findings, Evans, who said he has spent $160,000 in legal fees, was within his rights to build the towers and followed the proper procedures. The county permitted the towers as an allowable accessory use, much like a swimming pool, detached garage or shed, according to county Board of Appeals documents and other published reports. His attorney Steven Van Grack says that as a matter of law, the towers were constructed legally.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Though the Supreme Court ruling was the end of the road for the administrative case, the neighbors also filed a civil lawsuit against Evans

in Circuit Court in August 2004. Its been on hold until the administrative

case concluded. (Gazette.net)

BREAKING DX NEWS: SPRATLY ISLANDS COMING OIN THE AIR

If you have waited a ham radio lifetime to work the very elusive Spratly Islands, wait no longer. This with word that Ed Sawyer N1UR and his wife Christine, KB1PQN are expected to be active portable 9M6 from the Layang-Layang Island Resort in the Spratly Islands. This, between 0800 UTC

on , March 22nd through midnight UTC on March 30th.

The duo have already received their licenses. Once they get permission from

the Navy, they will apply for a special 9M0 callsign. Activity will be on 160 through 10 meters, on CW and SSB. 100 watts to omnidirectional verticals will be used from the near-by beach and the operators will be moving bands frequently to take advantage of changing band conditions and openings. Sunset on Spratly is 1040 UTC with sunrise at 2240 by the middle

of that week.

QSL cards for either operator go via Bob Tomkovich, Jr., K2RET, 405 Hemlock

Dr., Lanoka Harbor, NJ 08734 in the USA. More information is on line at www dot n1urspratly dot com. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

THE BPL WAR: SARL SAYS NO TO PLT / BPL

The South African Radio League will be taking a very tough stance in its fight to stop the proliferation of Broadband over Powerline Internet access

in that nation. According to a society news release, while the draft regulations for the introduction of what they call Powerline Internet Transmission or PLT go some way to protect the High Frequency radio spectrum from interference the general consensus was that the regulations do not go far enough. SARL says that interference limits, the lack of compulsory notching of the Amateur bands and the inadequate mitigation process were identified as some of the issues left open.

The decision was reached following a nationwide net on Sunday, February 24th where the draft PLT regulations and the negative impact the licensing

of Powerline Internet Transmission in South Africa will have on HF communication were discussed. The South African Radio League also received

input from experts in the field and a major assistance from the ARRL laboratory which has been dealing with BPL interference issues for several

years. (SARL)

**

RADIO LAW: FCC SAYS NO TO MORSE RECONSIDERATION REQUESTS

The FCC has said no to a pair of proposals that had asked for the restoration of Morse testing for a qualification to become and hold a United States Amateur Radio license. In a Memorandum Opinion and Order released February 28th, the FCC denied two petitions calling for General or

Amateur Extra license applicants to demonstrate proficiency in Morse code.

In the wake of the FCC's actions to do away with Morse testing, two amateurs submitted separate petitions asking the agency to bring back Morse testing. Anthony Gordon, KG6EQM, objected to the FCC eliminating the

telegraphy examination element as an examination requirement for the Amateur Extra Class operator license. Russell Ward, W4NI, requested the FCC reconsider its decision for strictly procedural reasons.

In denying both requests the FCC reiterated its prior conclusion that an individual's ability to demonstrate Morse code proficiency does not further

the underlying purposes of the Part 97 rules. It appears to be of the opinion that Morse does not accommodate individual contributions to the advancement of the radio art and to enhance the value of the amateur

service to the public.

In December 2006, the FCC decided to drop the Morse code requirement for all Amateur Radio license classes. At the time the commission decided to drop the Morse Code exam, it said knowing Morse is not necessarily indicative of an individual's ability to contribute to the advancement of

ham radio. The agency also said emergency communication today is performed

using voice, data or video modes. The agency claims that all of these are

much faster than telegraphy.

The FCC said it received roughly 100 comments on the reconsideration request. It says that most were overwhelmingly negative. (RW, ARRL, FCC)

**

RECUE RADIO: MARYLAND SENIORS FORM FIRST RESPONSE TEAM

A story in the March 5th edition of Hometown Annapolis dot com proves that

you do not have to be young to be an emergency planner. A story titled Heritage Harbour's Detailed Plans Impress County Officials tells the story

of how senior citizens in a planned Maryland community have put together a

first response unit that includes everything from stockpiling food and medical supplies to communicating with the world using Amateur Radio.

In this case the communications hub is the garage of Heritage Harbour resident Walter Van Gieson, AB4DQ. Van Gieson was a radio operator who served in the military during World War II. According to the news article,

in the event a disaster severs power and phone lines, AB4DQ's ham radio will become the lifeline out of Heritage Harbor.

The complete story is truly uplifting example of how those in their 70's and 80's and beyond can provide a valuable service to their communities. You can read all about the Heritage Harbour first response team at
www.hometownannapolis.com/cgi-bin/read/2008/03_02-14/TOP
(HometownAnnapolis.com)

RESCUE RADIO: WISCONSIN HAMS HELP SAVE DRIVER WHO RAN OFF THE ROAD

A pair of Wisconsin hams are being lauded for their quick action that likely saved an injured drivers life. We have more from Amateur Radio Newsline's Don Carlson, KQ6FM:

--

It happened on Wednesday, February 27th. That's when Robert Stout, WB9ECK,
put out a call for assistance on the Madison 147.150 two meter repeater and

was answered by Brian Sprecher, KC9LCC,. Stout told Sprecher that a car had

gone off the road, broken through a guard rail and stopped just short of a

creek. Stout aid that the driver was injured and trapped in his vehicle. He asked KC9LLC to inform authorities that an ambulance was needed at the scene.

Sprecher then put in a call to the county sheriff's office and relayed the

assistance call. Stout then kept Sprecher apprised of the driver's injuries. KC9LLC used the information to give the sheriff's dispatch updated real time information.

Stout remained at the scene providing aid until local police arrived. Sprecher stayed on the air relaying information from Stout to the

local authorities until they relieved him of duty and sent him on his way.

For the amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.

--

The identity of the victim and his medical condition were not known as this

newscast goes to air. (KC9GM, others)

**

RESCUE RADIO: CALIFORNIA HONORS DCS VOLUNTEERS

Twenty seven Los Angeles area hams who are members of the Carson Sheriff Station Disaster Communications Service have been honored for their work on

behalf of the community. All received individual and group awards from for

their taking part in a wide range of emergency and public service episodes

including assisting in providing assistance during tactical alerts due to civil unrest. The hams were also lauded for their work during the massive

wildfires that plagued the region last fall.

In expressing support to the volunteers a proclamation was issued. It said

in part that together local ham radio operators provided 7986 hours of service to the agencies. Also that the service provided by the Carson Station Disaster Communications Service volunteers has so far saved the taxpayers of Los Angeles County almost $320,000.

The Carson Station Disaster Communications Service is a volunteers group of radio amateurs who volunteer to provide communication links in the event

that more traditional communication systems are disabled due to natural or

manmade disasters. In addition to the 27 radio amateurs, thirteen deputies, a firefighter, two station volunteers and two citizens were also

recognized at the presentation event. (ARNewsline(tm) from LA Sheriff's Press
Release)

**

ENFORCEMENT: GOVERNMENT SILENCE LEADS TO FIGHT BACK WEBSITES

A new twist on the ham radio regulatory enforcement scene in the United States. This, as some radio amateurs accused of wrong doing by the Federal

Communications Commission take to the World Wide Web to plead their case or denounce the regulatory agency as interfering with their right to free speech.

In the wake of a recent FCC announcement that only final actions in ham radio matters would be made public, some hams accused of Part 97 infractions are taking their story public with websites and on-line blogs of their own. The reason seems to be to let the ham radio public know that they intend to fight the government accusations made against them.

Back on January 15th the FCC announced that due to privacy concerns that it

was dramatically scaling back the amount of information it would make public in regard to it Amateur Service enforcement actions. Up until then

it had been common practice for the agency to release letters to individuals that require a specific response to an allegation of wrong doing, Now the only information made public are Notices of Violation, Notices of Apparent Liability to Monetary Forfeiture and other final actions in a given case.

But in a strange turn of events, this new FCC posture to protect the identifies of those accused has lead at least two or three such people to create cyberspace homes. Places on the web where they have posted the violation notices that they received along with their respective views or responses.

The reason that these sites and blogs appearing is unclear since one would

think that most hams who receive letters of inquiry regarding their on-the-air operating practices would tend to want to keep the matter quiet

and settle the issue well out of the public eye. It will be interesting to

see how many more of these sites show up as ham radio rules enforcement continues and some on the receiving end of FCC notices going public to fight back. (ARNewsline(tm), others)

**

ENFORCEMENT: AMBULANCE COMPANY FINED FOR OPERATING ON AN UNAUTHORIZED FREQUENCY

Even first responders have to comply with the FCC rules as an Oregon company found out recently. The FCC affirms a $3200 monetary against Metro

West Ambulance licensee of station WQBI492, in Hillsboro, Oregon. This, for willful and repeated violation of Section 1.903(a) of the Commission's

Rules by operating on a frequency not authorized for it to use.

On June 11, 2007, the Enforcement Bureau's Portland Resident Agent Office

issued a Notice of Apparent Liability for Forfeiture in the amount of $4,000 to Metro West after determining that the company apparently willfully and repeatedly operated on 463.2875 MHz. This is a frequency not

authorized by its license. Metro West replied to the NAL on July 2, 2007.

In its response the company disputed some of the facts, arguing that the violation was not willful and not repeated, that Metro West took immediate

steps to rectify the situation as soon as it was aware of the violation, and that Metro West has a history of compliance with the Commission's Rules.

In affirming its action, the FCC said that the Communications Act defines "repeated" as "the commission or omission of such act more than once or, if
such commission or omission is continuous, for more than one day. It says

that in this case, the evidence is clear that Metro West operated its station on 463.2875 MHz for more than one day. Therefore, it finds no merit to that argument.

It did however agree that Metro West did have a history of overall compliance with the Commission's Rules. Based on this the FCC did reduce

Metro West's forfeiture amount from $4,000 to $3,200.

Metro West was given the customary 30 days to pay or to file a further appeal. (FCC)

**

HAM FREEWARE: WORKEDGRIDS FROM VE2ZAZ

Bertrand Zauhar, VE2ZAZ, has released his new freeware WorkedGrids, ham log

grid square mapping software. The program runs only under Windows. It displays a map showing the amateur radio grid squares contacted and logged

in using third-party logging program. Up to four bands can be displayed concurrently on the map. The program reads plain-text ASCII log files generated by most logging programs. WorkedGrids is directed towards the VHF and above operators who collect grid squares for contesting or award purposes. More is on-line at ve2zaz.net (ANS, VE2ZAZ)

**

NAMES IN THE NEWS: RAC ELECTS TWO NEW VP'S

Some names in the news. First up is Jim Hay, VE2VE. Hay has been elected

as Radio Amateur of Canada's Vice-President, for Technical and Administrative Services. This confirms his recent assumption of responsibilities for the organizations information technology requirements.

And John Bartlett, VE1OZ, has been elected as Radio Amateur of Canada's Vice-President for Public Relations. His job is to lead efforts to develop

strategies to improve membership across Canada and to promote Amateur Radio

to the Canadian public. (RAC)

**

NAMES IN THE NEWS: VK2AMD TURNS 100

And words of congratulations to Australian operator Howard Booth, VK2AMD who turned 100 years of age on March 6th. Originally licensed as G2AS of Sheffield England, Booth and his then young family emigrated to Australia

after the bad winters of the late 1940's, settling in Windang, NSW, some 60

miles south of Sydney. Booth, who was a builder and roofer in the U-K built his own house and still lives in it today. He is believed to be one

of the oldest or even the oldest active radio amateur on the Australian continent and possibly world-wide. (WIA)

**

THE SOCIAL SCENE: QCWA AT STUART FLORIDA HAMFEST - MARCH 15

Ken Simpson, W8EK, says that the Quarter Century Wireless Association will

hold an open forum at the Stuart Florida Hamfest. The date of the event is

Saturday, March 15th at 11:30 a.m. Eastern Standard Time. The venue is meeting room 2 at the Martin County Fairgrounds in Stuart. More information about the hamfest is on line at www.mcaraweb.com (QCWA)

**

THE SOCIAL SCENE: CHARLESTON HAMFEST - MARCH 15

And the 24th annual Charleston West Virginia Hamfest also takes place on Saturday March 15th. Its venue is the Coonskin Armory at 1707 Coonskin Drive in Charleston. Talk in is on the W8CHF 145.35 MHz repeater. For more information please contact our own Jim Damron. His e-mail is N8TMW at

arrl dot net. (N8TMW)

**

THE SOCIAL SCENE: MICROHAMS DIGITAL SEMINAR - MARCH 22

The second annual MicroHAMS Digital Seminar is slated for Saturday, March 22nd on the Microsoft campus in Redmond, Washington. The program includes

a wide variety of topics centered around digital communications and Amateur

radio. Lunch and snacks are included with the price of the conference and

there will be free Internet access. Because of space limitations and parking requirements pre-registering is suggested, More is on line http://www.microhams.com/digitalconference (W7LRD, ANS)

HAM HONORS: 2008 YHOTY NOMINATIONS BEING SOUGHT

In case you have not heard the announcement at the end of the newscast the

past few weeks, the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation.

Any FCC or Industry Canada licensed radio amateur, age 18 or younger, residing in the United States 50 states, plus Puerto Rico and the Canadian

Provinces is eligible to be nominated for this award. To obtain a nominating form, send a self-addressed, stamped envelope to 2008 Young Ham

of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, California, 91350, or download the form from www dot yhoty dot org. Nominations may be electronically submitted at the website, but supporting materials must be submitted separately.

Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. Again, more information is in cyberspace at

our special website at www.yhoty.org. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: GERMAN PUBLIC RADIO TO ABANDON EUREKA 147

A once prominent digital audio broadcasting format soon could be a technical achievement of the past in one European nation. This, as an oversight organization in Germany says its time to stop supporting Eureka

147. Jim Damron, N8TMW, has the details:

--

The organization responsible for setting fiscal policy for public broadcasting in Germany has deemed the Eureka-147 Digital Audio Broadcasting codec unworthy of further investment. The KEF which oversees

the financial aspect of DAB is calling for the equivalent of about $246 million slated to fund public-service DAB projects from 2009 to 2012 to be

reallocated to other projects.

Since 2001, some $266 million has been allocated to KEF for Digital Audio Broadcasting projects. In explaining its recommendation to halt such funding after 2008, KEF said that receiver options remained limited in Germany and that public support for FM radio and the availability of satellite radio, Internet radio, podcasts and other outlets have changed the nature of radio broadcasting since DAB was first envisioned.

I'm Jim Damron, N8TMW.

--

But there is some strong opposition to such a phase out. A group called the Initiative Marketing Digital Radio is a European consortium of receiver

manufacturers, transmitter network operators, program providers and institutions backing the DAB standard. It warns that Germany moving away from Eureka 147 could cause chaos. It says this is because the digitalization of broadcasting is unstoppable. (RW)

**

WORLDBEAT - UK: BBC CLOSES SHORTWAVE TO EUROPE

The British Broadcasting Company has announced that all its shortwave radio

transmissions to Europe ceased on 18th February 2008. The U-K based broadcaster says that it recognize that this will be a loss to some of their listeners, its managers point out that BBC World Service radio programs are delivered to Europe via other platforms including longwave at night.

The BBC's World Service grew from the original British Empire Service which

was inaugurated in 1932. Last year the BBC celebrated its 75th anniversary

and today boasts an estimated world audience of some 180 million.

According to the announcement, only the analog shortwave transmissions to Europe are affected. The experimental Digital Radio Mondiale or D-R-M transmissions for North East continental Europe will continue unaffected. Full details of World Service sound broadcasts can be found on

the web at bbc.co.uk/worldservice. (GB2RS)

**

HAM RADIO IN SPACE: AMSAT 2007 SYMPOSIUM DVD RELEASED

AMSAT North America has released its long awaited 2007 AMSAT Symposium DVD. The DVD contains all of the 2007 papers, PowerPoint slide show and audio of the presentations. Additional features include Symposium papers from 2004 and 2005, an International Space Station Columbus module video and much more.

This DVD is a must for anyone that was not able to attend the 2007 AMSAT Symposium or as a club meeting presentation. For pricing or to order a copy please contact Martha Sargovitz at the AMSAT office at telephone area

code 301 589-6062. (ANS)

**

OPERATING NEWS: INTERNATIONAL MUSEUMS WEEKEND ADDS ANOTHER WEEKEND

An update to last weeks story on the International Museums Weekend operating event slatted to place on 14th and 15th June. Due to popular demand, this event has now been extended to two weekends by adding June 21st and 22nd as well. Those intending to take part should register

their museum on the
International Museums Weekend website. (GB2RS)

**

DX

In DX, NZ5N reports that he will be operating the satellites during the upcoming Swan Island Dxpedition as HQ8R from March 15th to the 23rd. Bill

will be taking along an FT-817 and an Arrow antenna to work the birds. Time permitting, he will also try to make a few contacts before and

after the expedition from the Honduran mainland. Weather permitting, he may

also try to give out grid square EK 76 from the boat on the way to and from

the island. QSL as directed by the operator.

The 2007 Equatorial Guinea 3C7Y DXpedition to has been approved for DXCC credit. If you had cards rejected for this operation, please send an e-mail to the ARRL's DXCC Desk to have your record updated.

Beginning on Sunday the 9th of March, a week-long expedition will operate from
various castles and forts on the Isle of Man. Club calls GT4KPT, GT8LED and GT3GWB will used. They expect to activate several Worked All Britain areas during the week.

And G3RWF is active from Uganda as 5X1NH until March 22nd. His operation will be limited because he is on holiday but he expects to operate all of the High Frequency bands except 160 meters. Modes will be CW, SSB, RTTY and PSK. He will run 100 watts to wire antennas. QSL to G3RWF.

Last but by no mean least, F8CHM will be active as FR5EZ from Reunion Island until March 21st. He expects to be active on the High Frequency bands
as well as 6 meters on CW and SSB. QSL to his callbook address.

(Above from various DX news sources)

**

THAT FINAL ITEM: LIGHTNING AND ICE FOR SALE

And finally this week, a company that hams and broadcasters have come to rely on for lightning protection devices is up for sale. Its up for sale on eBay. The company is Industrial Communication Engineers. Its located in Indianapolis, Indiana here in the U-S-A and that's where you will also

find Amateur Radio Newsline's Jack Parker, W8ISH:

--

Better up that limit on your Pay Pal account. This business opportunity could cost you a pretty penny. Long time amateur radio operator Mike Koss

W9SU is hanging up his test leads and putting his company on the eBay auction block. Going price is a cool 2-point-7 million dollars. Koss has

spent the past 18 years building up his electronic products business. So why auction the business on eBay?

SOT: "eBay is one way you can advertise anything including a business. And there are
And it can be seen by the entire world. The total cost of the ad on eBay was 14-dollars".

This may be the first time an electronics manufacturer has been auctioned on eBay. For 2-point-seven-mil, Koss says you get a large product and parts inventory, circuit designs, established customer base, 800 number and

two new patents for electro-magnetic pulse and nuclear electro-pulse arrestors that have not yet been marketed.

So if lightning strikes and he gets an offer, what is this 40 year veteran

of amateur radio going to do now?
Koss: "Becoming somewhat of a semi-professional DXer has always been kind

of a keen interest. Ah, go back and sort of be a kid again",
Mike's world class ham radio station includes six tall towers that make great lightning rods. Its all protected by his patented lightning protection equipment. It's that ham station that Koss would like to spend

more time operating. He says the stress of running a business and getting

gray hair lead to his decision to auction the business on eBay and enjoy retirement.

Koss: "I'll probably travel a little bit because I haven't done very much
of that in my lifetime and I'd like to write a book".

Koss says the book would detail the finite science of tower installation, lightning protection and proper grounding techniques. It could be a golden idea that earns him enough pocket change to enjoy the best of amateur radio and his well earned retirement.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

Amateur Radio operators world-wide depend on Industrial Communication Engineers lightning protection equipment to keep their stations safe from Mother Nature. Many hope that Mike Koss, W9SU, is successful in finding someone to keep it going for many years to come while permitting him a lot

more time on the radio. (ARNewsline(tm), W9IND)

They surely do. About the time I first became licensed, I think there
were about 300k radio amateurs in the U.S. and only about 100k in the
entire rest of the world.

>>> Hallicrafters made the almost-all-solid-state

Right. The Drake firm stayed in the family and Swan stayed with the
original owner until he sold it to Cubic, circa 1980.

Nope. Around 1964, National introduced the solid state, synthesized
HRO-500. They were expensive problem children. There have been
numerous problems with the PLL circuitry. I bought one in 1997 and it
had (Surprise!) PLL problems. I sold it.

> About the only company besides Collins that was able to come into the

>
> Interesting! I always thought the reason they were left out was so
> that folks would buy the separates.

Not exactly. Drake figure that anyone who wanted to use CW *would* buy
the separates. They just didn't figure that there was a market for
transceivers among regular users of CW. The light finally dawned.
Of course that the meager CW features of the TR-4CW gave way to the
advanced features of the TR-5 and TR-7.

Uh-huh. It marked the end game for Heath. The company just didn't
realize it right away.

> I remember that towards the end of its run the HW-101 price reached
> $449, which was almost double its introductory price less than a
> decade earlier. That was without power supply, speaker, mike or sharp
> filter. And you had to build it. FT-101/TS-520S took that market!

Right. Don't forget that the JA rigs not only had an inboard,
multi-voltage AC power supply; they included a DC supply for mobile use
as well. Neither of the two rigs mentioned actually came with a CW
filter. Those were optional accessories.

>> When Kenwood began

It has to be more than a rumor. The TS-2000 is the top of their line.
The TS-950 hasn't been made in years and years.

> The TS-570 is also highly regarded.

It is a good transceiver, though many don't recognize it. K8MFO used
the variant which included 6m one as his main rig for some time.

I knew a guy who once had machinists make him a part for a Cadillac
power seat instead of paying what he considered to be an outrageous
price for the part from GM. I think he spent about four times what GM
wanted.

> And consider: $125 for a reduction tuning knob for a receiver that
> went out of production more than 45 years ago?

But those receivers are apt to be around for another few decades and are
highly prized. As I recall, there's still an outfit making highly
stable digital remote VFOs for the Collins KWM-2 series.

> In the bad old days PC fabrication for homebrewing meant doing layout

Those 1 KW or better, solid state amps are becoming more commonplace but prices are high and the things are still delicate. My pal N8NN runs his FT-1000MP with a Quadra for really easy band changes and computer control.

I'm looking at the Tokyo Hi Power 1.5 KW job, but it is expensive. If the Starkville, Mississippi gang gets their act together, we may see an affordable high power, solid state amp in the near future.

There's no one who can reduce a waste stream like West Africans. The
seams in Coke cans are opened after the tops and bottoms are removed and
the cans are rolled flat. The become roofing material or house siding.
Black trash bags are washed and recycled. Pop bottles become water
bottles and used 55-gallon drums (previous contents unknown) are used
for making palm or cashew wine.

I think that'd be appropriate.

The upright case has a full metal cover, space for a cooling fan and a
shelf which can hold the rectifier board and electrolytic caps. The
bottles aren't U.S. types, they're Phillips equivalents with graphite
plates. They should hold up for a long time. I'll use Chinese
Coleman-type lantern chimneys.

Some of us would have to buy stuff in order to have scraps. I've found
that the hobby shop stuff is not terribly expensive. They also have
round, square and sheet plastic stock. Some is clear and some is
translucent--ideal for making dial scales.

>> Wood with a thin sheet of flashing aluminum is one way to get the shieldin

I'm pretty sure the ones we did in 1973 are still in use in Cincinnati.
I had a big Jensen folded horn cabinet in Tanzania. It had a dual
voice coil 12" subwoofer in it. That's still in Africa.

Not everyone lives like us, Jim. Some folks have houses large enough to
be homes *and* museums and the wherewithal to populate the place with
both types of antiques. I can appreciate antiques as art but we don't
have enough room for antiques we can't put to use unless they happen to
be art for the wall or items which can sit on a table for the most part.

You're a lightweight! My main operating position is representative of
overkill. The frame is 2x4's; the legs are 4x4's and the top is a
hollow core door. There's a two shelf console with two angled wings,
with enough roof under the first shelf for solid-state brick VHF/UHF
amps, keyers, paddles, DVK and the like.

Did I mention the six foot rack to my right?

> I did one table with a hollow core door many years ago (it was free)

> buildings shaking, even a steel mounted would have such vibrations
> transfered to the projector. The wires might have even damped those
> types of motion.

Using wires does not work. The reason is that buildings do not shake in
the way most people think. The building may shake in one axis, and not
another, and may shake in multiple directions, but not the same amount in
all axes, or at the same time.

This will have the effect of pulling the entire assembly in one direction
or another, depending on "whats a-shakin'", and which wire is pulling
more at the moment.

However, on a good sturdy ceiling mount, that has a resonance frequency
as high as practical, building movement is not much of a problem, unless
the building is on the verge of shaking itself apart. The reason is that
rapid pendulum damping with little movement gets rid of pendulum moment,
and that most floors tend to shake closely with the ceiling on any given
level, so the people are moving along with the image and screen.

I've never seen a professional design with wires, although I've
seen a few designed by others, and they all have damping problems, all
related to the multifilar pendulums they create. Oddly, the wire systems
I've seen were "designed" and built by engineers who thought they could
remove all the filar pendulum movement by going multifilar. That
inherently creates more complexity in movement. The answer is in that the
projector on the end of that pendulum becomes very similar to a mirror
galvanometer, greatly amplifying the movement by the time the light hits
the wall.

>> Absolutely! This aesthetic is in no way saying "look at me! I'm

There is room in this world for a lot of different tastes. Some I
like, some I do not. I am always careful to not call any of them
ridiculous so that I don't indadvertantly insult someone. 8^)

I have a hard time agreeing that *that* Strat was defaced. I have a white
on white Strat myself, and am happy to keep it that way, but there are a
lot of places who do custom guitar work or design:

http://www.sparrowguitars.com/
http://www.terrapinguitars.com/
http://www.warmoth.com/

Even Fender:

http://www.fender.com/customshop/home/index.php

>> There is actually some of this aesthetic running about in Amateur

> It isn't evident here.

I disagree, respectfully, more below.

<snippage>

> Some kind of plating or paint is needed and it isn't practical to
> paint things like the threads of screws. Key's aren't designed to
> look as if they're steam powered.

Precious metal plating is not there because it is practical, all
those keys are quite embellished, and can we tell the difference between
a gold plated and a painted one in operation? They also have unneeded
shapes, and Mister Begali calls them art. I find them to be quite
beautiful, and a magnificent tour de force in mechanical design in the
prosaic function of a telegraph key, but would not try to argue that they
are somehow based on practicality.

That's pretty much my input on the subject until I have the operating are
designed and built. My shack may not be to everyone's tastes, but
hopefully I'll like it! 8^)

> all axes, or at the same time.

Okay, so what you earlier described as the motor fan causing a pendulum
motion wasn't exactly correct then. What you've described could be
described as random orbital in nature or, at times, even multiple pendula.

> This will have the effect of pulling the entire assembly in one direction
> or another, depending on "whats a-shakin'", and which wire is pulling
> more at the moment.

I'm thinking that if you've got a building doing *that much shaking*,
you've got more problems than a projector moving a bit.

> However, on a good sturdy ceiling mount, that has a resonance frequency
> as high as practical, building movement is not much of a problem, unless
> the building is on the verge of shaking itself apart. The reason is that

You must never be so sensitive about what people might think of your
opinion that you become afraid to express it. If you think that a
certain style is kitschy or silly, you're permitted to say so. So am I.

>> Kitsch is kitsch no matter who tosses the pillows with a flair.

Sure. Places which will do nearly anything for a buck abound. Some of
the work is skillfully done, but still ends up looking tacky.

>>> There is actually some of this aesthetic running about in Amateur

> Precious metal plating is not there because it is practical, all
> those keys are quite embellished, and can we tell the difference between
> a gold plated and a painted one in operation?

No, we can't. That doesn't stop the gold plated one from looking better
to most of us. Gold doesn't oxidize the same as most other metals. It
doesn't need to be polished often. Gold in contacts is used where low
conact resistance is desired. In the old days, keys usually had
appreciable current running through them. With low current, solid state
circuits, a little oxidation on contacts can result in a keying circuit
malfunctioning.

No keys which are currently produced are made to look as if they're
steam powered.

> They also have unneeded
> shapes, and Mister Begali calls them art.

Some folks think an abstract painting done by a Chimpanzee is art. I
don't agree with them. Begali keys are well made. They're attractive
to some.

> I find them to be quite
> beautiful, and a magnificent tour de force in mechanical design in the
> prosaic function of a telegraph key, but would not try to argue that they
> are somehow based on practicality.

Keys got prosaic function? The Begalis, like all other keyer paddles
are designed to do a certain job. They can be as attractive as one can
make them, but if they cannot do the job reasonably well, they fail.

An attempt to send a small, ham-radio equipped balloon across the Atlantic:

http://www.spiritofknoxville.com/

Balloon design by NG0X if I read the info right. Telemetry on 30 meters.

Which brings up a question:

What are the regulations for such a transmitter? Over the USA is one thing, FCC has rules for that, but above international waters and other countries it's a different game, particularly since there's no operator aboard. The website says the transmitter will be turned off over the UK.

Just wondering.

When customs stops the craft at the border, they'll provide further
clarification...

Heh heh. The record was already broken last year for a solo Atlantic crossing by a GPS-guided gas engine powered radio-control model (built by an amateur - not a professional - aircraft builder). Radio control for take off and climb out, then for landing in Ireland (? well, somewhere in the British Isles)
The engine ran throughout the flight!

Heavier-than-air, of course, just hadn't been done by a hobbyist R-C modeler before. Also, R-C has a license-free radio service both in North America and most of Europe. No 'customs' in the usual sense and everything was arranged beforehand at the landing site. Model Airplane News (MAN) had the story. Now THAT took some doing by the builder (a record-setter over land) and several fellow model aircraft hobbyists.

It's considered an unmanned aircraft and subject to those rules. If
it's registered in some country, it's subject to that country's rules
even if in international airspace. If it's not registered anywhere,
it's fair game to be shot down as target practice by Air Defence
aircraft.

Thanks, Phil. Very interesting.

Do you have any idea why they're going to the trouble to turn off the transmitter over the UK?

I'm not sure of the exact year you were licensed but if it was in the
1960s the number of US hams was about 250K not 300K. As for the rest
of the world, 100K back then was pretty accurate *except* for Japan's
4th class licenses.

>
> ...and that's a good tuning rate.

I used to wonder why most older equipment tuned so fast. One reason
was cost; a simple string or pinch drive cost a lot less than gears.
But even expensive stuff like the HROs had fast tuning by Southgate
standards.

I think the way hams operated in the past was a big reason. Split
operation was pretty standard even before crystal control was common
in ham rigs, so if you called CQ, an answer might be anywhere in the
band.

> Around 1964, National introduced the solid state, synthesized

Even with a working PLL, the '500 had bad intermod and dynamic range
problems for such an expensive rx.

> > About the only company besides Collins that was able to come into the

Kachina had an entirely new concept: the computer-controlled rig
without a front panel. That still hasn't really caught on.

Not just bells and whistles but basic things like RIT, sharp filters,
decent dial drives and the ability to turn off the AGC.
Built in or as options, not as mods.

> > Varactor in the PTO?
>
> Yep, with a relay switching scheme.

The Southgate Type 6 and Type 7 achieve RIT without a varactor diode.
In fact, there are no solid state devices at all in either rig except
for two 1N34As in the SWR bridge of the Transmatch.

Point is, you can get a very very good rig, American made, with direct connection to the makers of the rig, for less than a lot of mid-range rigs from Japan.

> > 'Course not. But they weren't the target market, either. The SB-101/
> > HW-101 crowd were.
>
> Uh-huh. &#65533; It marked the end game for Heath. &#65533; The company just did
n't
> realize it right away.

Part of what changed too was the economy of kitbuilding. In the days of point-to-point wiring, a lot of the cost of manufactured electronics was the assembly labor. Kits eliminated that, but added the cost of the assembly manual and the inevitable problems of supporting the kitbuilders. Automated and semiautomated PCB-based manufacturing drastically reduced the assembly-labor cost.

Another factor was alignment cost. Heath had to design their rigs so they could be aligned with minimal test gear. That's one reason for the preassembled LMO in the SB line and the preadjusted, sealed BPFs in them. That limit on design flexibility doesn't exist for a manufacturer who can spread the cost of test equipment over many units.

> > I remember that towards the end of its run the HW-101 price reached

> Right. &#65533; Don't forget that the JA rigs not only had an inboard,
> multi-voltage AC power supply; they included a DC supply for mobile use
> as well.

Sort of. The TS-520S required the optional bolt-on DC-5 DC supply adapter for DC operation of the transmitter section. It consisted mostly of power transistors and a heat sink. It would not operate the '520 at full power; you were limited to about half power. In the TS-520SE, the last version, the DC option was eliminated and the rig became AC-mains only.

>&#65533; Neither of the two rigs mentioned actually came with a CW
> filter. &#65533; Those were optional accessories.

Yup - but not an expensive one.

What will the transmitting frequency be..? Don't forget that we have different frequencies in some bands, for example we only get 2 MHz in the 2m band, 144-146 MHz whereas the US has 144-148 MHz.

If it will be transmitting outside of the UK bandplan then that would be a valid reason as the frequency used could be in use for something else over here.

Amateur Radio Newsline(tm) Report 1596 - March 14, 2008

Amateur Radio Newsline report number 1596 with a release date of Friday, March 14th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The U-S championship Amateur Radio Direction Finding games are set for May in Texas, a former Novice is fined $4300 and

a look back at ham radio taking to space on a commercial communications satellite. All this and more on Amateur Radio Newsline(tm) report number 1596
coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE USA ARDF CHAMPIONSHIP IN TEXAS IN MAY

Hidden transmitter hunters from across the nation are making plans to visit

Texas in May. This, with hopes of going to Korea in the Fall. And its all

in the name of radiosports. Newsline's Joe Moell K0OV tells us why. K0OV report:

--

Registration is now open for the biggest annual on-foot transmitter hunting

event in the Western Hemisphere. The Eighth USA ARDF Championships take place Thursday, May 8 through Saturday, May 10 at Bastrop State Park near Austin, Texas. The best radio-orienteers in the USA will be there, but the

courses will also be open to anyone, from any nation, at any radio foxhunting skill level. There will be practice sessions, a big two-meter hunt and another hunt on 80 meters, following standard international rules.

Excellent maps by the Houston Orienteering Club will be given to competitors before they set out on the course. Deer, raccoon and armadillo

make their home among the tall pines in this park, as well as over 250 bird

species.

National ARDF Championships are for individuals only. No teaming or assistance on the course is permitted. If you're a senior, don't worry about trying to compete against teenagers. Equal medals will be awarded in

five separate
age categories for OM's from under 18 to over 60. There are four similar age categories for the YLs.

Anyone with reasonable physical abilities can participate. You must be able

to run or walk through the forest and carry your DF gear for five to ten kilometers. You might win a medal, and maybe even a spot on Team USA, which

will be traveling to South Korea for the World championships in September.

We can only send a maximum of three people in each age category to Korea, so our national championships determine who gets the invitations.

For everything you need to know about the USA Championships, including schedules and registration forms, point your Web browser to the official site, _www.TexasARDF.org_ (http://www.TexasARDF.org) . That's TexasARDF.org. For a jump-start into the sport of ARDF, with equipment ideas and news of the World
Championships in Korea, go to _www.homingin.com_ (http://www.homingin.com)

, that's homingin.com.

From southern California, this Joe Moell, K0OV, for Amateur Radio Newsline.

--

As far back as the earliest days of Amateur Radio, direction finding has been a part of the hobby. And one can only wonder what the earliest T-hunters would say if they were here now to see the way in which their favorite past time has matured into an international radiosport. (K0OV)

**

RADIO LAW: GRAND TERRACE CA AGREES TO REDRAFT PROPOSED ANTENNA ORDENANCE

You cant call this a win yet, but it could wind up being one in the near future. This as the city of Grand Terrace, California, agrees to re-draft

a controversial proposed antenna ordinance that hams Say could take them off the air.

According to an e-mail bulletin to all ARRL members in the Southwestern Division, Grand Terrace, which is located in San Bernardino County, held a

hearing regarding proposed antenna restrictions on Tuesday evening, March 11th. In response to a letter from Volunteer Counsel, Len Shafer, WA6QHD,

the city did make a few technical changes to the wording of the proposed ordinance. Unfortunately, most of the undesirable proposed limitations remained as originally written.

A dozen or so local hams including ARRL Southwestern Division Vice Director

Marty Woll, N6VI, and Orange Section Manager Carl Gardenias, WU6D, attended

the hearing. The amateurs explained the adverse impact of the proposed limitations, the likelihood of frequent and contentious appeals, and possible litigation, the city council.

After hearing the testimony the council members unanimously agreed to a suggestion from Woll that the ordinance be redrafted by a working group that will now include ham radio operators on the panel. No timetable fore

the work to be completed was announced. (SW Division News Release)

**

HAM NUMBERS: GERMANY SAYS ITS HAM RADIO COMMUNITY GROWING

Some good news from overseas. Ham radio continues to grow in Germany.

That nations national society the Deutscher Amateur Radio Club or DARC, says that recent figures show that the overall number of amateur radio callsigns rose from 80,496 in 2006 to 80,927 in 2007.

But the news was not as good for the Deutscher Amateur Radio Club itself. It says that within the same period of time its membership fell from 45,308 to 44,246.

All in all, 75,262 personal amateur radio calls were registered in Germany

throughout 2007. (Deutscher Amateur Radio Club)

RESCUE RADIO: D-STAR TO SHINE AT GAREC 08

D-Star will be a prominent player at the upcoming Global Amateur Radio Emergency Communications Conference, Also known by the acronym GAREC 0h 8, the event will take place June 26, and 27 in Friedrichshafen, Germany. This, in conjunction with German national HamRadio convention and

exposition.

GAREC-08 will focus on the co-operation among I-A-R-U member societies and

with specialized groups working on emergency communications in the Amateur

Radio Service. Among the items on the program is a session titled 'D-Star

an Advanced Technology in Emergency Communications. The preliminary program for conference can be seen at www.iaru.org/emergency/GAREC2008Program.pdf (Southgate)

**

RESCUE RADIO: CT DRILL BECOMES REAL LIFE DRAMA

Ham radio was part of a recent American Red Cross exercise held by the Mid-Fairfield County Chapter in Connecticut that became a real life emergency operation. The original purpose of the planned operation was to

familiarize non ham members of the local Disaster Action Team members with

the territory serviced by the chapter. Also to gain experience in the use

of GPS to navigate to a destination; learn about the use of radio during a

deployment; and compare the operation of VHF/UHF amateur radio gear and Red

Cross 47.420 MHz radios.

The plan was to deploy five Red Cross vehicles to different destinations within the ten served communities covering over 200 square miles. Each vehicle would have a ham operator carrying a handheld VHF/UHF radio. Four

of the vehicles would have a permanently installed Red Cross 47.420 MHz radio. In order to gain experience, only non-hams were to operate the Red Cross radios. A base station would be situated at the Bridgeport chapter house. The Greater Bridgeport ARC supported the Red Cross with nine fully

qualified and trained Red Cross volunteers.

Just minutes prior to the scheduled start a real incident occurred and the

volunteers responded. It was a fire emergency o the Red Cross Disaster Action Teams were activated. During the emergency radio amateurs were the communications link for the Red Cross which provided canteen supplies, office supplies and water.

Radio contact using the 47.420 MHz frequency was not possible once the vehicles were on scene at the incident site. Amateur radio performed flawlessly using repeaters in Bridgeport and Fairfield. The variety of available repeater locations and their antenna height provided the capability to virtually eliminate communications problems due to terrain or

structural interference. (WE1M)

WITH NEWSLINE: LATEST WEB SUPER SUPPORTER ABNNOUNCED

We at Amateur Radio Newsline are happy to announce our latest web super supporter. Our support fund Administrator Andy Jaremea, N6TCQ, has words as to whom it is:

--

The month of February 2008 saw another of our promotions for our web Super

Supporters. This time for an MFJ 2 meter FM monitor receiver to be awarded

to the individual or club donating the most to Amateur Radio Newsline during February.

A longtime supporter of Newsline is the Reading Amateur Radio Club in Pennsylvania, W3BN, and we are pleased to be sending their promotional award out to them in the next week or so. One of the things this club has

the right to be proud of is that their original ARRL charter was signed by

none other than Hirim Percy Maxim.

If you did not receive this support information you need to get on the Newsline Yahoogroups distribution list. Just go to Yahoogroups.com and sign up there. Information on donations I on our website.

I'm Andy Jarema, N6TCQ.

--

Our thanks to all of you who support the Amateur Radio Newsline. Its you who make these weekly newscast possible. (ARNewsline(tm))

ENFORCEMENT: ANOTHER HAM WARNED TO STAY OFF CERTAIN REPEATERS

A Maine radio amateur has been warned by the FCC to stay off certain repeaters or face enforcement action against her license. Receiving the Warning Notice from the FCC's Spectrum Enforcement Division is Amanda Spenlinhauer, KB1CQX, of the town of Wells. In it the FCC states that she must refrain from using any repeater where the trustee says to stay off. The FCC also told to Spenlinhauer that her Amateur Radio license

expires in June. It advises her that it will not be routinely renewed unless this matter is resolved. (FCC)

**

ENFORCEMENT: FCC FINES FORMER NOVICE $4300

The FCC has levied a fine against a former ham who operated after his ticket had expired. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

On March 6, the FCC announced that it has issued a Forfeiture Order in the

amount of $4300 to Ronald Mondgock, the ex-KA3OMZ, of Honeybrook, Pennsylvania, for operating radio transmitting equipment on the frequencies

of 439.850 MHz and 147.560 MHz without an FCC issued license to do so.

While he was licensed, Mondgock, held only a Novice class ticket. He was issued his first Advisory Notice in February 2001 after he had been heard operating on the 75 meter band. He was told that he was not authorized to

use that portion of the spectrum and instructed to review the Commission's

rules relating to Amateur Radio Service frequencies.

In July 2004, Mondgock, received a Citation from the FCC's Philadelphia Field Office dealing with several alleged infractions including operating on a frequency not authorized for Novice Class license holders. He did not

reply as directed by the FCC and was issued a Warning Notice in November 2004. He was also told that his license that was scheduled to expire on December 14, 2005 would not be renewed until the matter is resolved.

In February 2006, the Commission sent Mondgock another letter telling him that his application for renewal of his Amateur Radio license could not be

routinely granted and has been referred to the Enforcement Bureau for review. This, because he had never submitted responses to the Commission's

correspondence and never claimed a letter sent via certified mail.

Mondgock was given 20 days to respond. He was also warned that if he chose not to do so that his application for renewal would be dismissed and

a Notice of Apparent Liability for Monetary Forfeiture will be issued against him.

Apparently Mondgock chose to let his license lapse but he did not go away. It fell into the two year grace period where a ham can renew without

taking a test but cannot legally operate. So it was in December 2006, the

FCC's Field Office in Philadelphia sent Mondgock another Letter of Inquiry. This time to as part of its investigation of allegations of Mondgock operating his Amateur Radio Service station on the frequencies 147.560 MHz and 439.850 MHz. Again no response so on August 15, 2007, the

Commission's Philadelphia Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 for unlicensed operation

to Mondgock.

This time Mondgock did write back. In his response he did not deny the FCC's findings. Instead he asked for a cancellation of the proposed fine based on his inability to pay. He also supplied the financial documentation that the FCC said that it required.

After examining Mondgock's financial records the Commission declined to cancel the forfeiture. It did however recognize the financial hardship that a $10,000 fine would cause and reduced the amount to $4300.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Mondgock was given the usual 30 days to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTING BRINGS $10000 FINE

The FCC has affirmed a $10,000 monetary forfeiture or fine issued to Pennsylvania resident Michael Stone Campbell. This, for allegedly operating an unlicensed radio transmitter on the frequency 97.7 MHz in the

Philadelphia area.

Back on October 2, 2007, the Commission's Philadelphia Field Office issued

the Notice of Apparent Liability to Campbell. Although Campbell never filed a response he did submit a letter to Senator Arlen Specter, which was

forwarded to the Commission on December 26, 2007. In his letter to Senator

Specter, Campbell claims that the FCC lost his construction permit application, but he never has provided any evidence that he submitted such

an application to begin with. Moreover, even if Campbell had provided such

evidence, the mere filing of an application would not have provided Campbell any authority to operate a radio station.

Based on the information before it the Commission has now affirmed the $10,000 forfeiture. Campbell was given the usual 30 days to pay up or to file a further appeal. (FCC)

**

ENFORCEMENT: TWINS ARRESTED IN CA COPPER THEFT

A first break in the cases of the ongoing copper thefts that have been plaguing telecommunications providers ion the South-West. This with word that twin brothers and a juvenile have been arrested in connection with a series of thefts of copper wire in California. Jim Damron, N8TMW, has more:

--

An under cover investigation by the city of Lancaster's Sheriff's Station began after a report was filed by Verizon that $40,000 worth of copper wire

had been stolen. The investigation in a sparsely populated area lasted nearly 50 hours. Three suspects were taken into custody who were linked to

four thefts of copper from Verizon over two weeks.

The suspects reportedly climbed utility poles to cut the wire down and it was taken to recycling facilities where it was sold for between $1.80 and $2.50 a pound. Authorities a believe that the three suspects may be linked

to at least a dozen similar thefts cross the region.

For the Amateur Radio Newsline, I'm Jim Damron, N8TMW, reporting.

--

With the price of copper soaring due to demand in overseas markets the theft of wire especially the south-west has become a major issue here in

the United StatesIts also one of the reasons you are paying o much for coax

and rotor cable these days. (Published reports)

**

HAM RADIO ON THE WEB: THREE NEW HAM RADIO ONLY WEBSITES

Several of what can best be described as ham radio clones of existing Internet services have sprung up in recent weeks. First up www dot cqoogle

dot com which calls itself a ham radio specific search engine. Its really

sharp at pulling up and grouping ham radio only information and is far better than its general purpose namesake. This one is a winner from the get-go.

Also now on-line is a ham radio dedicated video sharing site calling itself

www dot cqtube dot com. Its kind of like a youtube where hams can hare videos but that in itself may be why it has only a handful of videos uploaded to it so far. It appear as if most hams who go to the trouble of

producing a video are targeting those outside of the hobby and that's where
the more general purpose youtube dot com truly excels.

Both cqoogle and cqtube are registered to Justin Johnson, G0KSC in Essex, in the United Kingdom who also operates the eBay-like www dot hambid dot com. Johnson described as the Managing Director of Telco Consultants Limited. That company has already seen success with online business in the

such as its A1isp operation and now seems to be extending it's business plan into Amateur Radio. (ARNewsline(tm))

CHANGING OF THE GUARD: HARVEY HETLAND N6MM KILLED IN HIT AND RUN ACCIDENT

Longtime Pasadena City College professor Harvey Hetland, N6MM, was killed Wednesday, March 5th in what authorities are calling a hit-and-run

cycling accident in a Los Angeles suburb.

According to a reports in the Star News newspaper and the Westside Bikeside

newsletter, Hetland and a companion cycleist were on their way home after riding up to the town of Montrose. They were descending La Tuna Canyon Road in near-by Sunland where N6MM was passed on his right by an automobile. Hetland swerved the bike into the center of the road and fell

over, got up for a moment, and then collapsed. An exact cause of death has

yet to be determined.

First licensed in 1960, and an Extra class license holder since 1964, Hetland was a member of the DXCC Honor Roll and was certified as a 35 word

per minute Morse operator. He had retired from Pasadena City College in 2007 where had spent 32 years teaching various courses including electronics and applied algebra.

Authorities are still looking for the car and its driver involved in the accident. Funeral services for Harvey Hetland, N6MM, were scheduled for Thursday, March 13, at the Westminster Presbyterian Church in Pasadena, California. He was age 65. (Star News, Westside Bikeside, K0OV)

EMERGING TECHNOLOGY: VISUALLY HANDICAPPED EMMCOMS SYSTEM DEVELOPED

Turning to the new technology page, researchers at Georgia Tech's Wireless

Rehabilitation Engineering Research Center say that they have received good

news. This, regarding initial testing of their newly developed Wireless Emergency Communications or W-E-C project for the visually handicapped. Results indicate that 94 percent of blind and visually impaired test subjects found W-E-C to be a significant improvement over their current methods of receiving emergency alerts.

This first field test involved participants from the Georgia Radio Reading

Service in a full-day study to engage the effectiveness and accessibility of this prototype emergency alerting system. Subjects ranged from sight-enhanced individuals to those who are fully blind. Additionally, the

test subjects' level of familiarity and use of wireless technologies ranged

from technically savvy to infrequent users.

WEC tested custom software that runs on a Windows Mobile OS, designed to send accessible emergency alerts to short message service capable handsets. The custom software then presented the content of the text alert

in an audio format. During the test engineers simulated the emergency alerts, employing the Common Alerting Protocol, as if they originated from

the National Weather Service. The mobile phones used had the capability to

recognize an incoming alert of critical importance and override any muted sound or vibration settings to ensure that the critical alarm was delivered.

Some 18 percent of Americans are thought to have some type of disability, and that an estimated 60 percent of Americans use wireless services. The advantage of accessible emergency communications software and devices like

this is that they can reach the user, no matter what their activity or location, with lifesaving information. Once fully functional, it could also assist blind hams involved in Emergency Communications work as well. (KC9RP)

**

EMERGING TECHNOLOGY: W1YU D-STAR REPEATER OPS PAGE

Some names in the news. First is Tim Mik, WY1U, in Connecticut, who has created a web page that enables anyone to view activity on a particular D-STAR repeater. All you need to do is select a geographic area, select a

repeater and go click to see whose on the air and who recently has been.

The page is for now centered on U-S operations. As such it only includes

a few of the D-Star repeaters that are available in the other parts of the

world. You can view this new service to D-Star users and those interested

in this emerging mode at
http://home.comcast.net/~timmik/dstarsearch.html (Southgate)

**

NAMES IN THE NEWS: NEIL PATEL NOMINATED TO HEAD NTIA

The White House has nominated Neil Patel to head the National
Telecommunications and Information Administration, better known as the NTIA.

Patel has been assistant secretary for domestic and economic policy to Vice

President Cheney. Before that, he was staff secretary to the vice president

and is former general counsel at UUNET Technologies.

The NTIA is the President's principal adviser on telecommunications and
information policy.. Meredith Atwell Baker has been heading the program as

acting NTIA chief. she is leaving the agency, but has not publicly given a

timetable for her departure. Patel must be confirmed by the Senate. (RW)

HAM RADIO IN SPACE: ARISS TRAINING PLANNED FOR THREE NEW ASTRO-HAMS

Amateur Radio on the International Space Station training sessions are
being planned for astronauts Nicole Stott, KE5GJN, Sandy Magnus, KE5FYE,
and Bob Thirsk, VA3CSA. Magnus is expected to be a crewmember of
Expedition 17 and 18, flying to the ISS on STS-126 in September. Stott, a

member of the Expedition 19 crew, will fly on STS-128 in May 2009. Thirsk,

a CSA astronaut, will follow the same month on a Soyuz flight. (ANS)

**

WORELDBEAT - NEW ZEALAND: NZART CLOSES MEMBERSHIP E-MAIL REFLECTORS TO
AVOID LITIGATION

The national society of New Zealand, the NZART has announced the closure of

its Internet reflectors.. This means that all remailers formerly open to

members are being permanently shit down.

The reason given in the Match 5th notice indicates that the action came
about to keep the NZART from becoming embroiled in some future
litigation. This, in case someone posted something another ham did not
like and the matter went to court.

The only NZART e-mail reflectors that will continue to operate are those

for internal use not open to the general membership. These include the Council only, HQ plus Council only, the Officers only and the ARE-C reflectors. All the other NZART sponsored reflectors closed indefinitely effective at 9 p.m. New Zealand time on Friday 7 March 2008. Only more proof that we live in a truly litigious world. (NZART)

**

DX

In D-X word that F5LGE, is active portable FM from Martinique until March 30th. Listen out for him on 160 and 80 meters on CW. Operation seem to take place between 2330 to 0730 UTC. QSL via F5LGE, by the Bureau or direct. to Courgibet Rene, 13 Ruelle Crepion, 51240 ST Germain la Ville, France.

Also, BU2AI, is again active portable 9 from Matsu Island until March 20th. He operates as a mobile station from 1000 to 2300 UTC on low band CW

and SSB. QSL to his home callsign, direct or by the bureau.

W6ALC will be in China for three weeks starting on March 17th. Red says that he has permission to operate from the contest station B7P. He also plans to visit the new club station BY7OK in Foshan. QSL as he directs you

on the air.

And WA2YUN is currently on a work assignment on Wake Island operating portable KH9 as time permits. QSL this operation via K2PF.

Above from various DX news sources

**

THAT FINAL ITEM: AUSAT - THE HAM RADIO SATELLITE LINK

And finally this week, the story of ham radio taking to space on a commercial communications satellite. It happened a few years ago down-under. WIA- Newsman Jim Linton, VK3PC, takes on a trip back in time:

--

Recent news that AMSAT-North America had struck a deal with IntelSat to put

an amateur satellite in geosynchronous orbit has rekindled memories of when

VK and ZL radio amateurs had such a satellite.

In the early 1990s Australia's satellite company Aussat opened access to a

spare transponder on one of its three its geostationary satellites, primarily for use during the Jamboree on The Air.

The Aussat link was normally established a week prior to JOTA for testing and for the general amateur community to use.

It was accessible through various amateur repeaters across Australia and the national UHF linked repeater system in New Zealand. There was also the

capability to transmit to all points the annual JOTA opening broadcast.

The Westlakes Amateur Radio Club VK2ATZ north of Sydney also used Aussat for amateur television transmission.

The transmission was downlinked by Peter Cossins VK3BFG who rebroadcast it

across Melbourne via the ATV repeater VK3RTV.

A proposed system called AMLINK, or Amateur Link, was conceived which sought to permanently link a network of 70cm repeaters in Australian capital cities through Aussat.

Approval was granted, a prototype interface unit developed and tested, then

news came through that a replacement Aussat satellite had suffered a launch

failure.

Changing government telecommunications policy ultimately rescinded approval

for the AMLINK project, and sadly the geostationary satellite era for radio

hams down under came to an end.

I'm Jim Linton VK3PC and you're listening to the Amateur Radio Newsline.

--

Thanks Jim. (WIA News, VK3PC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the

RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can

also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008

Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is

eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

A balloon is an aircraft so that makes it illegal to transmit.
No transmitting equipment may be operated from an aircraft other than
type approved aviation band equipment under the control of the commander.

Can you cite any sources that back up this statement?

Weather balloons are launched on a daily basis, using radio to send
their data. I don't think that these are illegal.

I believe that "pilot in command" is the term you want instead of
"commander", and it's my understanding that any equipment that the PIC
approves can be used from the aircraft. I've heard a fair number of
hams signing "aeronautical mobile" and I'm sure that private pilots
routinely use cell phones. Another example is the telephone service
provided on many commercial airliners.

So does that make the whole project is illegal..?

What about amateur radio equipment (which is what we're talking about,
isn't it)..?

It's illegal here in the UK to operate aeronautical mobile but I
understand that in the US and other countries it's allowed with the
permission of the PIC (pilot in command).

But this is an unmanned craft, so where do we stand with that..?

I'm not sure where you are getting your info. Lots of hams are sending
up balloons with transmitters all the time. Lots of links can be
googled, but here are two:

http://www.athensarc.org/balloon.asp
http://www.arbonet.net/

At least in the US, the rules are conducive to ballooning for schools,
amateurs and weather forecasters. I'd been planning to do some Amateur
ballooning for several years, but other duties have interfered.

One of the most difficult aspects of trying to get a group started was
the disbelief of many people that we were actually allowed to do this
sort of thing.

There are rules, and they must be followed, but they are commonsense and
not terribly restrictive.

Some of the other replies are apparently forgetting we're talking about it being illegal **while the balloon is flying over the UK**.

It is indeed legal **under U.S. regulations** to operate aeronautical mobile. But U.S. regulations cease to apply once the balloon enters the airspace of some other country. It would appear British regulations do not allow for aeronautical mobile operation in unmanned aircraft.

The Commander of an aircraft is not necessarily the pilot in command.
The commander, who is a qualified pilot but does not necessarily fly
the aircraft, is responsible throughout the flight in the same way
as the captain of a ship. Many long haul flights depart with 2 crews,
one sleeping. It is not unusual for the person sitting in the left hand
seat (and thus pilot in command) to change 3 or more times in the
course of the flight but there is only one commander.
Do you expect the two pilots sitting up front to remain awake and
competant for a 16 hour flight ?.

That may be the case in the USA but it is certainly illegal in the UK
and in the European Union. There are a few type-approved satellite based
telephone systems which ICAO have agreed may be fitted in passenger
aircraft, all of which are permanent fixtures. These remain switched
off until the aircraft reaches cruising altitude and are switched off
again at top of descent to minimise the risk to navigation systems.

ANY aircraft.

An aircraft is ruled by the law of its country of registration but
operation is ruled by the authority in whose airspace the aircraft
is currently located. It may thus be legal to fit a transmitter in
the USA to a USA registered aircraft but it must be switched off
before entering european airspace.

: Can you cite any sources that back up this statement?
:
: Weather balloons are launched on a daily basis, using
: radio to send their data. I don't think that these are
: illegal.
:
: I believe that "pilot in command" is the term you want
: instead of "commander", and it's my understanding that
: any equipment that the PIC approves can be used from the
: aircraft. I've heard a fair number of hams signing
: "aeronautical mobile" and I'm sure that private pilots
: routinely use cell phones. Another example is the
: telephone service provided on many commercial airliners.

But these are still region-specific. Here in Region 1 we are most definitely *not* allowed to use amateur equipment on board aircraft, even a light aircraft of which the operator might be the sole occupant and therefore his own PIC.

Likewise cellular phones. Although the technical specifications of the systems in use, certainly GSM as used over here, means that once in the air the handset would be unlikely to see many base stations as the transmitting antennas of these would be aimed downwards at ground-based users.

The phone service provided commercially on airliners is satellite based and is specifically licensed for the purpose. Some airlines are (unfortunately IMHO) experimenting with pico-cells inside the cabin to allow passengers to use their own handsets, but the onward transmission from the aircraft is by satellite.

It may be in the the UK, but here in the USA, some of the In Plane Phone Communications, is done in the 800 Mhz band from Ground Stations. Our Regulatory Agency, (FCC) setup a Radio Service just for Air Ground Phone Communications. I can't remember the Actual Name offhand, but I am sure that Phil can come up with it.

179. DXCC life cycle of 6O (Somalia)?

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-14 17:50:49 UTC
From: Bert Hyman <bert@iphouse.com>

Rumaging through a box of QSLs accumulated over the last 40 years, I see that I have confirmations for about 200 countries, so maybe it's finally time to apply for DXCC :-)

I understand how deleted countries work, but what about Somalia? If memory serves, that country, or parts of it with similar names, has come into and gone out of existence several times since I got a 6O1ND card back in 1963.

Is it just a wash, because a country of that name, in more or less the same place is now on the DXCC list?

==> 2008 GLOBAL EMCOMM CONFERENCE TO BE HELD IN FRIEDRICHSHAFEN, GERMANY

The fourth annual Global Amateur Radio Emergency Communications (GAREC)
Conference <http://www.iaru.org/emergency/GAREC2008Program.pdf> is
```

scheduled for June 26-27, 2008 in Friedrichshafen, Germany, just prior to HamRadio 2008 <http://www.hamradio-friedrichshafen.de/html/en/>. That event, called "the Dayton of Europe," is scheduled for June 27-29. GAREC's schedule is continuously being updated and is subject to change.

Dr Hamadoun Toure, HB9EHT, Secretary General of the International Telecommunication Union (ITU), is scheduled to present the opening remarks at GAREC-08; Dr Toure received his Amateur Radio license in 2007. Ole Garpestad, LA2RR, President of IARU Region 1, is scheduled to participate in the opening remarks, too.

GAREC will take a look at the state of EmComm preparedness in each of the IARU regions, as well as discuss experiences of the 2006 and 2007 EmComm Parties-on-the-Air and the future of the Global Simulated Emergency Test (SET). Delegates will also discuss implementation of the WRC-03 modifications to Article 25 of the Radio Regulations, in respect to third-party traffic during emergencies and exercises. The part of Article 25 concerning Emergency Communications says "Amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction" (RR 25.3), and "Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief" (RR 25.9A).

GAREC delegates will also have the opportunity to look at and discuss the Memorandum of Understanding (MOU) between the International Amateur Radio Union (IARU) and the International Federation of Red Cross Red Crescent Societies (IFRC), as well as the MOU between the IARU and the ITU. IARU Vice President Tim Ellam, VE6SH, with assistance from IFRC Secretary General Markku Niskala and IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS/F5VKP, will lead the discussion. A representative from the ITU will also be on hand.

Each of the three IARU Region Presidents will speak on the status of EmComm in their respective region. Seppo Sisatto, OH1VR, and Juha Hulkko, OH8NC, will present on the possibility of Emergency Communication Centers around the world. There will also be a talk on D-STAR in emergency communications. Case studies of emergency communication practices will also be presented.

Those wishing to attend GAREC-08 are encouraged to register online <http://www.korkee.net/Garec2008/>. For those registering prior to June 12, the fee is 55 euros; after June 12, the fee is 75 euros. GAREC will take place in the Conference Center of the Friedrichshafen Messe in the Oesterreich Room. Travel and lodging information for GAREC and HamRadio 2008 is available online at the HamRadio 2008 Web page.

==> IDAHO AMATEURS ON HAND FOR SPECIAL OLYMPICS INVITATIONAL WINTER GAMES

More than 20 Amateur Radio operators wrapped up technical and operational support for the 2008 Special Olympics Invitational Winter Games in Boise, Tamarack and Sun Valley, Idaho the last week in February. Approximately 365 athletes from 10 countries competed in five sports -- Alpine Skiing, Cross-Country Skiing, Floor Hockey, Snowboarding and Snowshoeing. The Invitational Games were seen as the practice run for the 2009 Special Olympics World Winter Games to be held in Idaho February 6-13, 2009.

The Department of Defense provided Motorola VHF analog and P25 handheld radios and temporary repeaters to support the Games. Covering all of Southwestern Idaho, the ARES VHF repeater was instrumental in providing Games radio communications and critical communications for athlete transportation to and from Bogus Basin and Boise. Crossband links were used to coordinate and provide communications to the KX7ID Boise ARES repeater from the Tamarack Snowboarding venue near the Cascade/Donnelly area, about 100 miles north of Boise.

"It was a privilege to work with the Idaho State Police, Boise Police, Ada County Sheriff, Ada County EMS, Blaine County Sheriff and others within the Public Safety community," said Chuck Robertson, KX7ID, Technical Director for Games Radio Communications. "We are grateful for the relationships built during these test Games which will improve cooperation and teamwork as we work together toward support of the 2009 Games and public service initiatives beyond the Games."

The 147.380 MHz ARES repeater was the primary system used for the event, but the KX7ID UHF repeater, D-Star VHF simplex and P25 VHF simplex were also used. In addition, D-Star VHF low speed data using D*Chat <http://nj6n.com/dstar/dstar_chat.html> was tested from the Boise National Weather Service to Boise area hospitals.

"Communications are a vital component to any successful event, especially one as complex as the 2008 Special Olympics Invitational Winter Games and the upcoming 2009 Special Olympics World Winter Games, which are both multi-sport and multi-venue events with a lot of moving parts," said Kirk Miles, 2009 Special Olympics World Winter Games Chief Operating Officer. "We are grateful to all the Amateur Radio operators that have worked or will be working to make the 2009 Games a great success."

The 2009 Special Olympics World Winter Games <http://www.2009worldgames.org/> will be held in Idaho, February 6-13, 2009 and will include up to 3000 athletes from as many as 85 countries and 6000 volunteers. Competition will take place in seven winter sports -- Alpine Skiing, Cross-Country Skiing, Figure Skating, Floor Hockey, Snowboarding, Snowshoeing and Speed Skating. Competition and activities will be in communities and venues throughout Idaho, including Bogus Basin, Boise State University, Qwest Arena, Idaho Ice World, Sun Valley Resort and Tamarack Resort.

==> TEXAS TO HOST USA'S ARDF CHAMPIONSHIPS

Bastrop State Park in Central Texas will be the site for this year's USA championship of on-foot hidden transmitter hunting. Fans of this international sport -- also called foxhunting or Amateur Radio Direction Finding (ARDF) -- are making travel plans now.

Interest and participation in ARDF has been growing every year since stateside hams first competed at the World Championships in 1998. Beginning in 2001, there has been an annual national championship to see who is best at the sport and to select team members for the World Championships. The Texas ARDF group and the Houston Orienteering Club are combining to host this year's events, to be held the second weekend of May.

Thursday, May 8 is scheduled for arrival and equipment testing; 2 and 80 meter transmitters will also be on the air near the event headquarters. There will also be a get-acquainted meeting and drawing for the starting order. The 2 meter contest will take place Friday morning. Competitors will start in small groups made up of different age and gender categories, in the drawn order.

The 80 meter event will be early Saturday morning with starts in reverse order, highest numbers first. After everyone returns from the woods and the results are tallied, medals will be presented for first, second and third place in each category. There will be ample time for everyone to return home in time for Mother's Day activities.

On both bands, each of the five foxes transmits for 60 seconds at a time in numbered order on one frequency, and then the cycle repeats. Fox #1 continuously sends "MOE" in Morse code, then #2 sends "MOI," #3 sends "MOS" and so forth. Knowledge of Morse code isn't necessary, because the number of dits reveals which fox is on. Find your required foxes in any order and then head for the finish, following your map or the continuous beacon transmitter on a second frequency.

As always, the USA ARDF Championships are open to anyone of any age who can safely navigate the woods. A ham radio license is not required, so encourage your unlicensed-but-athletic friends and family members to join in. Each person competes as an individual; there is no teaming or person-to-person assistance allowed on the courses. Using GPS as a navigation aid is also forbidden.

The annual ARDF championships are an ideal opportunity to watch and learn from the best radio-orienteers in the country, as well as visitors from around the world. Previous USA championships have drawn experts from Australia, China, the Czech Republic, England, Germany, Hungary, Kazakhstan and Ukraine.

Registration for the 2008 USA championships is now open. A $70-per-person package includes the practice session, both competitions, Friday dinner and a T-shirt. Check out the Texas ARDF Web site <http://www.texasardf.org/> for detailed schedules, frequencies, lodging information and registration forms. An e-mail reflector <http://lists.texasardf.org/mailman/listinfo/texasardf> is available for

Q&A, as well as for coordinating transportation and arranging equipment loans.

If you have never participated in an international-style transmitter hunt, you will find all the basics at ARRL Amateur Radio Direction Finding Coordinator Joe Moell's, K0OV, Web site <http://www.homingin.com/intlfox.html> including the rules and signal parameters. You will get equipment ideas for 2 meters and 80 meters. You can also determine your own age category. The pages of photos from our previous championships will help you decide what gear to carry (the lighter, the better) and what to wear. -- Information provided by ARRL ARDF Coordinator Joe Moell, K0OV

==> MICHIGAN AMATEURS TEAM UP WITH STATE

ARRL Michigan Section Manager Dale Williams, WA8EFK, and Michigan Section Emergency Coordinator John McDonough, WB8RCR, have been working with the Homeland Security Division of the Michigan State Police Emergency Management to align the capabilities of the Amateur Radio Public Service Corps (ARPSC) more closely with the communications needs of the state's public service agencies.

ARPSC -- Michigan's integrated ARES/RACES program -- also participates in the Michigan State Department Emergency Management Coordinators Quarterly meetings at the State Emergency Operating Center. It is here, Williams said, that discussion of the Public Safety communications grants are discussed and their investment justifications are detailed. "We have been afforded the opportunity to discuss Amateur Radio's involvement with communications interoperability, as well as our ability to fill gaps in disparate networks and outages. As a result of these conferences, I was asked to include a list of ARPSC's needs for the next three years."

To further that end, Williams told the ARRL that they have been successful in incorporating the ARPSC Program into the Michigan State Preparedness Priorities. Michigan intends to develop the ARPSC into a fully integrated communications team operating under common standards and procedures, including maintaining and enhancing the statewide Amateur Radio communications system; establishing suggested standards for Amateur Radio capabilities in local Emergency Operations Centers, and developing a public awareness and education program to bolster the ranks of Amateur Radio participants. The hope, Williams said, is to have all this implemented by 2010.

Williams said, "Since the early 1980s, Michigan has operated an integrated ARES, RACES and NTS program referred to as the Michigan Amateur Radio Public Service Corps. By combining the forces of these normally separate structures, these valuable resources are pulled together to form an active trained and unified organization. The Section Emergency Coordinator also holds the positions of Section Traffic Manager and RACES Radio Officer. Membership in ARPSC is open to all amateurs and is structured to allow a beginning ham to progress from an

entry-level position to a RACES-qualified operator by meeting specific training milestones."

"There is no doubt that by presenting a unified organization, the Michigan ARPSC has demonstrated the effective use of resources, training and our unique capabilities so that we have become a well respected public service organization in the state," Williams said.

==> FCC SLAMS PENNSYLVANIA HAM WITH FORFEITURE ORDER

On March 6, the FCC announced that it has issued a "Forfeiture Order" <http://fjallfoss.fcc.gov/edocs_public/attachmatch/DA-08-498A1.pdf> in the amount of $4300 to Ronald Mondgock, KA3OMZ, of Honeybrook, Pennsylvania, "for willfully and repeatedly violating Section 301 of the "Communications Act of 1934, as amended" (Act), by operating radio transmitting equipment on the frequencies 439.850 MHz and 147.560 MHz without a license." Section 301 states a federal license is required to "operate any apparatus for the transmission of energy or communications or signals by radio." Mondgock's Amateur Radio license expired in December 2005.

Mondgock, who held a Novice class license, first received an "Advisory Notice" in February 2001 warning that he had been heard operating on the 75 meter band. He was told that he was not authorized to use that portion of the band and to review the Commission's rules relating to Amateur Radio Service frequencies.

In July 2004, Mondgock, received a "Citation" from the FCC's Philadelphia Field Office "related to failure to identify, transmissions involving obscenity and indecency and operating on a frequency not authorized for your Novice Class license." He was issued a "Warning Notice" in November 2004 for not replying to the "Citation" within the 20-day period. In the Warning Notice, Mondgock was warned by the Commission that if "a reply is not received by December 15, 2004, a 'Notice of Apparent Liability for Monetary Forfeiture' will be issued against you. We note also that your license expires December 14, 2005. No renewal or upgrade will be granted until this matter is resolved."

Also in July 2004, Mondgock received a letter from the FCC stating that the Commission "received an anonymous complaint alleging that several operators on the Amateur Radio Service frequency 146.55 MHz were using profane or obscene words or language and were failing to transmit their amateur license call signs. On June 2, 2004, between 7:30 p.m. and 8:45 p.m., an FCC agent with the Philadelphia Office investigated the complaint and monitored radio communications on the frequency 146.550 MHz allegedly between William Chapman (KB3IXS) and you. Based on your alleged radio communications that the FCC agent monitored, you may have violated the following FCC rules: Failing to transmit an amateur license call sign, in violation of Section 97.119(a) of the rules; Transmitting obscene and indecent words and language, in violation of Section 97.113(a) of the rules, and Operating on an unauthorized frequency, in violation of Section 97.301(e) of the rules. (A Novice class amateur

licensee does not authorize operation on any frequency in the 2-meter Amateur Radio Service frequency band, 144-148 MHz, including 146.55 MHz." Mondgock was given 20 days to respond and told that his response "must address each alleged violation and include a statement of the specific actions taken to preclude a recurrence."

In February 2006, the Commission sent Mondgock a letter telling him that his application for renewal of his Amateur Radio license "cannot be routinely granted and has been referred to the Enforcement Bureau for review." He was advised that this was because he had never submitted responses to the Commission's correspondence or never claimed a letter sent via certified mail. Mondgock was given yet another 20 days to respond to this letter, and warned that if he chose not to do so that "your application for renewal will be dismissed and a 'Notice of Apparent Liability for Monetary Forfeiture' will be issued against you."

In December 2006, the FCC's Field Office in Philadelphia sent Mondgock another "Letter of Inquiry" to "follow up on a recent investigation, of the operation of your Amateur Radio Service station, on the frequencies 147.560 MHz and 439.850 MHz. in Philadelphia, Pennsylvania. As discussed more fully below, agents determined the operation of your Amateur Radio Service station on the frequencies 147.560 MHz and 439.850 MHz violates Section 1.903(a) of the Rules and your operation on those frequencies must cease immediately. In addition, you are required to submit a detailed written response to the questions below regarding the operation of your station."

The FCC received information that Mondgock was operating radio transmitting equipment on the frequencies 147.560 MHz and 439.850 MHz. In response, the Philadelphia Field Office conducted an investigation between August-October 2006. "An agent used direction finding techniques to determine that you apparently operated radio transmitting equipment on the frequency 439.850 MHz from your residence on September 19, 2006, between 8:45 p.m. and 9:30 p.m. and from your vehicle on October 24, 2006, between 5:30 p.m. and 6:02 p.m. In addition, on September 12, 2006, the agent used direction finding techniques to determine that you apparently operated a repeater station on the frequency 147.560 MHz from One Commerce Square in Philadelphia, Pennsylvania."

The FCC asked Mondgock 11 detailed questions concerning his operations, directing him to "provide a complete explanation to the following questions and should provide copies of any relevant documents." He was told that his answers must be accompanied by a signed, sworn statement attesting to the truth and accuracy of the response. He was given 20 days to respond with answers to the questions and provide the sworn statement.

On August 15, 2007, the Commission's Philadelphia Field Office issued a "Notice of Apparent Liability for Forfeiture" (NAL) to Mondgock in the amount of $10,000 for operating radio transmitting equipment on the frequencies 439.850 MHz and 147.560 MHz without a license. Mondgock responded to the NAL and did not dispute the findings of the Commission,

but requested a cancellation of the Forfeiture based on his inability to pay.

In examining Mondgock's response, Section 503(b) of the "Act" requires that the Commission take into account "the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require." When considering someone's inability to pay a fine, the FCC has determined that, in general, gross revenues are the best indicator of an ability to pay a forfeiture. The FCC examined Mondgock's financial documentation that he provided. The Commission declined to cancel the forfeiture but reduced the amount from the original $10,000 to $4300, based on Mondgock's demonstrated inability to pay the full forfeiture amount.

==> FCC FIXES TYPOGRAPHICAL ERRORS IN PART 97

On March 12, in an effort to correct typographical errors in the Commission's Rules (including rules affecting Part 97, the Amateur Radio Service), the FCC released a Memorandum Opinion and Order (MOO) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-530A1.pdf>. According to the FCC, these changes in the MOO are "non-substantive editorial revisions" and do not introduce new rules or change old rules applicable to Amateur Radio operators.

In this MOO, the FCC is updating the Allocation Table and service rules for the Amateur Radio Service with regard to the band 75.5-81 GHz. In 2003, the Commission released a Report & Order (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-248A1.pdf>, commonly called the "70/80/90 GHz R&O," that adopted a transition plan for the amateur use of the segment 75.5-76 GHz. The Commission concluded that moving Amateur Radio operations out of the 75.5-76 GHz band would not pose a major inconvenience to the Amateur Radio Service, but would "substantially benefit future fixed services, because it would eliminate the possibility of harmful interference from amateurs." Accordingly, the primary allocations to the Amateur and Amateur Satellite Services in the 75.5-76 GHz band were downgraded from primary to secondary status, with secondary use ceasing on January 1, 2006. After that date, the band 75.5-76 GHz was no longer available for use by the Amateur Service or the Amateur Satellite Service.

This transition plan was codified in footnote US387 and in Section 97.303(r)(3) of the Commission's Amateur Service rules. Because the transition period has concluded, the Commission "removed expired footnote US387 from the list of U.S. footnotes and we are amending Part 97 of the Commission's Rules to reflect this allocation change by: (1) revising the entry "75.5-81.0" GHz in Section 97.301(a) to read "76-81" GHz; (2) removing paragraphs (r)(2) and (r)(3) from Section 97.303; and (3) renumbering paragraph (r)(1) as paragraph (r)."

In October 2006, the FCC released another Report & Order (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-149A1.pdf>,

the "Amateur Phone Band Expansion R&O," that expanded the phone bands. With the release of the MOO, the FCC is making two changes.

The first change to the October 2006 R&O is simply a correction of a typographical error in the Rules for the General phone allocation on 15 meters. In the Amateur Phone Band Expansion R&O, the Commission revised 21.30-21.45 MHz to read 21.275-21.45 MHz, but the current codification of the rule does not reflect this change. All the Commission did was to bring the Rules into alignment with the R&O.

The second change fixed an omission in the Novice/Technician allocation on 40 meters. The FCC found that when the Amateur Phone Band Expansion R&O was released, "the Commission expanded the frequency segment authorized for amateur voice communications within the 40 meter band by correspondingly reducing a band segment used for narrowband emission types by 25 kHz, from 7.100-7.150 MHz to 7.100-7.125 MHz." The revised frequency table in Section 97.301(e) of the FCC's Rules that lists authorized frequency bands for Novice and Technician Class inadvertently omitted 7.100-7.125 MHz from Regions 1 and 3. "Because the Amateur Phone Band Expansion R&O addressed the division of amateur frequencies among permissible emission types and not between geographic ITU Regions, we must further amend Section 97.301(e), as set forth in Appendix C, to implement the Commission's decision. Specifically, we are revising the 40 meter band by reinserting the segment '7.100-7.125' MHz in the Region 1 and Region 3 columns."

The FCC also took the opportunity to remove a double negative from Section 97.303(b). Before the release of the MOO, this Section read: "No amateur station transmitting in the 1900-2000 kHz segment, the 70 cm band, the 33 cm band, the 23 cm band, the 13 cm band, the 9 cm band, the 5 cm band, the 3 cm band, the 24.05-24.25 GHz segment, the 76-77.5 GHz segment, the 78-81 GHz segment, the 136-141 GHz segment, and the 241-248 GHz segment SHALL NOT cause harmful interference to, nor is protected from interference due to the operation of, the Federal radiolocation service." The FCC chose to take out the word "NOT" to bring the rule's words in line with the spirit of the rule.

==>SOLAR UPDATE

Tad "Saw in the Sun a mighty angel stand" Cook, K7RA, this week reports: With just a few scattered sunspots in the past two weeks -- February 28-March 12 -- it isn't meaningful to ponder the change in weekly averages. There were just four days with sunspots during that time: February 28, March 5-6 and March 10. Sunspot numbers for March 6 through 12 were 12, 0, 0, 0, 12, 0 and 0 with a mean of 3.4. The 10.7 cm flux was 70.3, 70.5, 69.8, 69.5, 70.3, 70.2 and 69.4 with a mean of 70. Estimated planetary A indices were 2, 3, 11, 25, 18, 12 and 14 with a mean of 12.1. Estimated mid-latitude A indices were 2, 1, 6, 14, 12, 7 and 9 with a mean of 7.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation

Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is March 14. The AGCW VHF/UHF Contest, Feld Hell Sprint and the 10-10 International Mobile Contest are on March 15. The Russian DX Contest is March 15-16 and the Virginia QSO Party is March 15-17. The UBA Spring Contest (6 meters) and the 9K 15 Meter Contest are both March 16. On March 17, look for the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are scheduled for March 20. Next weekend is the ARLHS Annual Spring Lites QSO Party from March 21-30. Another running of the NCCC Sprint is March 21. The BARTG Spring RTTY Contest is March 22-24. The UBA Spring Contest (2 Meters) is March 23 and the SKCC Sprint is March 26. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 23, 2008, for these online course sessions beginning on Friday, April 4, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on March 21. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, March 20; there will be no "ARRL Audio News" that week. ARRL Headquarters will reopen Monday, March 24 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

* KH6 Incoming QSL Bureau Address Change: As of April 1, 2008, Barbara Darling, NH7FY, will assume management of the Hawaiian KH6 Incoming QSL Bureau. All card shipments should now be sent to KH6 QSL Bureau, Big Island ARC, Attn: Barbara Darling, NH7FY, PO Box 1938, Hilo, HI 96721-1938. Any concerns regarding this bureau's operation should be directed via e-mail to Barbara Darling, NH7FY <nh7fy@yahoo.com>. The ARRL would like to thank former KH6 Incoming QSL Manager Wayne Jones, NH6K, for his years of service.

* "Spirit of Knoxville" Sees Successful Launch: The trans-Atlantic balloon flight of the "Spirit of Knoxville IV" <http://www.spiritofknoxville.com/> launched into orbit on March 11 at 0200 UTC (10 PM EDT March 10). The balloon, designed to stay aloft for more than 24 hours, was successfully inserted into the current jet stream at normal flight altitudes of 30,000-40,000 feet. On Wednesday, March 12, it had made two-thirds of its journey and crossed the tectonic plate to Europe. Organizers hoped the balloon would make to Europe, but after 40 hours and 3300 miles, the balloon lost altitude late Wednesday and went into the ocean as it neared Ireland. Using radio frequencies, the balloon transmitted data detailing its current location, distance traveled, speed, height and health of the balloon. The balloon's payload consisted of hand-made computers and radios, along with a GPS and self-authored software. The onboard computer gathered such information from the GPS as altitude, speed and temperature; the computer then determined whether the balloon needed to drop weight to maintain its altitude and sent this information, via Amateur Radio frequencies, to volunteers around the globe.

* Exhibit Kits Now Available for Field Day: Please visit our Field Day information page <http://www.arr.org/fieldday> for all the details on Field Day rules, frequencies, forms, pins, logos and T shirts. The complete Field Day packet can be downloaded from the site as well. If you have unanswered questions about Field Day, contact ARRL Field Day Manager Dan Henderson, N1ND, via e-mail <fcinfo@arrl.org> or by phone at 860-594-0236. If you want to order exhibit kits containing printed flyers about Amateur Radio, you may order these materials <http://www.arrl.org/brochures/> on the ARRL Web site. The cost of the exhibit kits ranges from $8-$12 depending on shipping. To make sure you'll have the display material in time for Field Day, your order must be received before June 13.

* Amateur Radio Exempt from California's New "Hands Free" Law: On July 1, the State of California will have new laws on the books to deal with the use of wireless telephones while driving. There has been some confusion as to whether California amateurs who operate in their car will be affected by the new law. According to the California Department of Motor Vehicle's Web site <http://www.dmv.ca.gov/cellularphonelaws/dl208_03cell_phone.pdf>, "the use of dedicated two-way radios such as walkie-talkies or Citizen Band (CB) radios is not affected by the new law" for drivers 18 or older.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2007 ZL1GO/8 DXpedition to Kermadec Island has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

* Snake Update: E-mails to name the W1HQ snake <http://www.arrl.org/news/stories/2008/02/21/100/> keep coming in to ARRL HQ. According to ARRL News Editor S. Khrystyne Keane, K1SFA, more 600 names have been submitted. "I am sorting through the names and soon the W1HQ team will go through all of them and choose the name for our mascot."

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all

automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

This may be the case in the UK - I'm not up to speed on that, though -
but as far as US-registered aircraft is concerned, non-aviation radio
equipment, such as amateur radio, common-carrier radio, private mobile
("two-way") radio, and broadcast auxiliary radio is installed and
operated routinely by persons other than the aircraft commander, as
long as the station is authorized either by specific license or by
blanket authorization.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

Except for the reuse of possibly-contaminated 55-gal drums it all
sounds good.

The dial drum of the Southgate Type 7 was made from a piece of 6"
diameter plexiglass pipe. It was thoroughly cleaned and about a 2"
long section cut off. A disk 6" in diameter was then cut and the pipe
solvent-welded to the disk using Duco.

The neutralizing-adjustment disk from a BC-375 tuning unit was then
bolted to the bottom so that the dial drum could be mounted on an
extension of the tuning capacitor shaft.

The dial drum is viewed through a Plexiglas window. A piece of paper
wrapped around the drum was calibrated using an LM frequency meter,
then a good copy drawn using a CAD program. The good copy was printed
on translucent Mylar and put on the drum.

A lampholder/reflector assembly is mounted inside the dial drum, with
two pilot lights so the whole thing is illuminated.

There's a good discussion over on eham about high power tubes,
gettering and other issues. Unlike receiving tubes with their shiny
flashed getters, high power tubes often use the anode or a coating as
the getter, and need to operate at high temperature to work.

Lots of good info out there free for the download. W5JGV's site has
info from Eimac, RCA, Taylor and other tube makers. Not just the usual
number and data but application notes, recommended practices, etc.

Don't want fancy. Want functional.

Thursday there was the remains of a packing box for some new furniture
by a dumpster near here. The box was corrugated but the base was nice
2x4 and 1x6, nailed together. Cut off the corrugated and saved the
wood.

For me that frame is overkill but the hollow-core door is underkill -
not strong enough.

> Did I mention the six foot rack to my right?

I've had table racks but always wanted a six or seven foot floor rack.
My old Handbook has plans for a wooden one...

Yes but that's not the issue. You can punch right through the surface
with something sharp and heavy enough.
>

> Mine will break down too, but I don't think it'll fit in a Rabbit. :-)

Less than 10 minutes to set up or take down, no tools needed. It's all about multiple uses. No card-tables on FD for me.

Yeah, I've thought about it a great deal. Some of those drums may have had petroleum products or pesticides or such. You might want to think about getting your beef in a black trash bag which was previously used for garbage. I once bought a loaf of French bread on the street which came wrapped in a letter I'd discarded in the trash. It didn't bother me too much since I'd already gotten used to picking the baked weevils out of the bread.

That's a pretty inventive way to handle a homebrew dial.

It sounds remarkably like the way Hammarlund handled the
dial/illumination in the HQ-215.

>>> You want a Southgate type number for it?

I'm forced to admit that I've got many of the original transmitting and
receiving guides. When I sold industrial electronics for Hughes-Peters,
I rescued an old Eimac three-ring binder from the trash. It contains
the specs for most early and late Eimac bottles along with applications
notes and design info for amateur amplifiers. Quite a number of those
notes and articles were done by Bill Orr W6SAI (SK). I consider Bill's
articles to be excellent.

I can't tell you how many leftovers I have from buying material for a project. When I lived in Cincy, I used to hit the scrap bins of a plastics distributor so I have quite a bit of scrap teflon, nylon and lucite rod, sheet and tube. Finding it when I want it is the hard part.

I'm not above that. My last crank up tower from Tashjian/Tri-Ex had a crate built from 22-foot-long California 2x4's and some long, narrow strips of plywood. I kept it all. I'd never even seen 22' pieces of 2x4 stock prior to getting these. They're reddish in color and are of some sort of pine not often found here in the East.

Well, these 3,000 to 5000 square foot mega-homes have been cropping up everywhere in the past decade. They're much cheaper to heat and cool than some of the earlier built homes.

That's why I mentioned the console. Everything heavy sits on it. The
four supports for it distribute the weight so that nothing can break
through the door. There's one large HF rig, one HF/VHF/UHF rig, four
rotor control boxes, an HF amp, three remote coaxial switches, three
watt meters, two speakers, an antenna tune, a RTTY/digital modem, spare
receiver and a monitor scope on the console. Assorted accessory boxes
sit under the console and there's an LCD computer monitor and a keyboard
on the desk too.

TNX. Not a single new part was used. It's done a good job these past
dozen years.

> It sounds remarkably like the way Hammarlund handled the
> dial/illumination in the HQ-215.

That's what inspired the design, except there's no dial cord in the
Type 7. IIRC, the HQ-215 lamps aren't *inside* the dial drum, are
they?

Priceless stuff!

> Quite a number of those
> notes and articles were done by Bill Orr W6SAI (SK).
>&#65533; I consider Bill's
> articles to be excellent.

I agree. Those articles and notes often go far beyond mere
specifications and general data, too. They often explain *why*
something is done, not just what to do.

A lot of the info is rather subtle. For example, if one is used to
receiving and low-power transmitting tubes with their silvery flashed
getters, where overheating causes the getter to lose its silvery
appearance, it is counter-intuitive that the gettering action of high
power transmitting tubes can actually depend the plate reaching high
temperatures. Or that, in the case of high-gain glass tetrodes like
the 4-125A, running lightly loaded can cause the glass of the tube to
soften from electron bombardment.

I think that a lot of things were tossed in the 1970s-1990s because
folks thought they'd never be needed again. Can't tell you how many
tubes and tube-related parts I acquired in those years for little or
nothing, because the folks getting rid of it thought nobody would ever
need or want it in the future.

This sort of thing even happens in the aerospace industry. A lot of
documentation was simply dumped as programs ended. Rocket engine
designers are going to museums to see how it was done in the past, and
have the problem of seeing what was done but not why.

> I can't tell you how many leftovers I have from buying material for > a

> part.

Same here.

How's this for scrounging:

When this house got new siding back a few years, the antenna mast had to come down so the siding could be put on. But when the mast was to be reinstalled, I needed some spacers to make everything line up correctly.

Machining metal to do the job would have been a big deal. Wood was easy but would be a maintenance job, exposed to the weather. PVC was too soft and not available in the right sizes anyway.

Then I remembered that relatives had redone their kitchen some years earlier, and had gotten white Corian countertops installed. The installers had left some Corian scraps behind. The relatives had kept them, figuring there had to be some use for such wonderful material.

Sure enough, the scraps were still available for the asking. I got some and made the exact spacer blocks needed. Tough, weatherproof, easy to machine, and even the right color.
> > Don't want fancy. Want functional.

The only places I've seen such long pieces of 2x4 were in old balloon-framed houses. One reason balloon-framing ended was the availability and cost of such wood.

> Well, these 3,000 to 5000 square foot mega-homes
> have been cropping up
> everywhere in the past decade.

We call them "McMansions" in these parts. But that really applies more to the 4,000-8.000+ sf houses we see.

It is not unusual around here to see a perfectly good house from the 1950s to 1970s bought and torn down by a developer so a McMansion can be built. The value is in the land - often the price of the new place is twice that of the old. The current housing bust has mostly put an

end to that, but not completely. More than a few locals are up in arms because it means less "affordable" housing units.

The amateur radio connection to all of this is that often the house which was torn down had mature trees good for antennas and no CC&Rs. "Development" often removes at least some of the trees, or they don't survive the construction process, and the new place is usually CC&R'd to the max.

>• They're much cheaper to heat and cool
> than some of the earlier built homes.

That depends on two factors: scaling (as a house gets bigger, the interior volume grows faster than the exterior wall/roof area) and how houses are built.

When this house got the work done a couple summers ago, and some walls were opened, it turned out that there was no insulation. Just a thin layer of wallboard, 2x4s, 1x10 sheathing (not plywood yet the house is from 1950) tar paper and mineral siding. Of course insulation and Tyvek were installed, and then the new siding.

> > Same here. All about multiple uses.

Beautiful, just beautiful..

One difference is that your console/desk is purpose-built for the shack. Custom use, IOW. The op desk I use was designed to be multi-purpose, and has been on several Field Days, as have the Southgate rigs.

When a thing is built to do just one thing, it can often be made simple and yet high-performance for that one thing. When it has to do multiple things, there are always more compromises.

Hello Phil, I was wondering if the Secrecy Clause was still a part of the Communications Act of 1934, or if it had been rescinded or replaced by some other Language in some later Act? Does it still apply to any FCC Operator License Holder?

Heh. What's funny is that after you've lived in one of those places for a while, these things tend to seem perfectly rational. When the embassy water pump broke, we lived for six weeks with a string of locals hiking the five flights to our flat with a bucket full of water in each hand. They'd dump the buck in a plastic garbage can, turn around and trot down the stairs for another couple of buckets. We lived like that for six weeks--taking bucket baths, doing hand wash and so forth. Keep in mind that all water used for drinking/cooking had to be boiled and filtered before use, whether the pumps were in operation or not.

We had a pipe burst inside a wall of our laundry room once. There was no pipe available in town. Worker dug into the concrete wall, found the break and used rubber tubing and hose clamps to join the broken pieces. With every surge of the water pump, the tubing expanded and contracted, looking like it had a pulse. WAWA--West Africa Wins Again.

Yes, it is. There's only one inside the drum and another for the
S-meter. To the left of the dial window is a calibration adjustment.
To the right is an identical knob which dims the dial lamps if desired.
I desire it a lot since dimming them a bit keeps from having to put in
new lamps very often.

Exactly. I'd never realized until I got the binder that Eimac had even published amateur linear amplifier "how to" articles. A linear amp isn't a difficult thing to design yourself if you understand why a final tank Q within a paricular range is desired and you can use tables published by Orr for translating the plate load impedence of a particular bottle (run at a particular plate voltage) to find the values of C1, C2 and L needed for the tank circuit.

It makes sense. There is a great difference between a receiving-type tube run at relatively low voltages and a high power transmitting tube run at high voltages. Their construction is quite different.

> Or that, in the case of high-gain glass tetrodes like
> the 4-125A, running lightly loaded can cause the glass of the tube to

That sort of thing was also evident in TV horizontal output tubes. As I pointed out in the e-ham forum, Nonex glass was used in some later sweep tubes to help in preventing suck-in.

I have enough boat anchor gear that I've taken about anything offered over the years. Having the parts to keep something running isn't the problem. Storage is.

I've read articles stating that NASA is having real problem as those with knowledge of the design of such engines are retiring or have already retired.

That's one I'd not considered. What I might have considered is that
newer composite decking material which is designed to last for decades.
It can be cut easily and comes in a variety of color. I'd have likely
gone with something like that since nobody hereabouts has put in any
Corian counters lately.

I'm not familiar with the term "balloon framing". I'm looking it up. I don't think there's anything available from my local lumberyard in lengths exceeding 16'.

I can't really understand the "up in arms" part because we really having a surplus of existing housing in the country. The "tear it down and build a new one" stuff is going on in the Cincinnati area too.

> The amateur radio connection to all of this is that often the house
> which was torn down had mature trees good for antennas and no CC&Rs.
> "Development" often removes at least some of the trees, or they don't
> survive the construction process, and the new place is usually CC&R'd
> to the max.

That IS a problem for radio amateurs. I think a bigger problem is that most of our newer housing is built in subdivisions. Those subdivisions are not radio friendly at all. I'm seeing more and more magazine articles on stealth antennas. I won't consider living in one of those areas.

We're sitting on an acre. If we re-locate, I'd be happier with 2 or 3 acres. I wouldn't object if half of that area happened to be in trees or woods though.

The "how houses are built" part is what I meant to address. Things like
a geothermal heating/cooling systems are another factor. W8RHM's new
place has one and it is a large house. His heating and cooling bills
are quite reasonable.

> When this house got the work done a couple summers ago, and some walls

That had to make a difference.

If not beautiful, at least it isn't ugly. The console and the former
W8YX desk got hauled to each of my Foreign Service postings. The
console is approaching thirty years in age. It gets a new coat of paint
about once per decade.

> One difference is that your console/desk is purpose-built for the

N8NN and I have been using those plastic-topped banquet tables with the
folding legs inside a screen room for FD use. That's because 1) they're

easy to set up and take down and 2) Bert has some.

> When a thing is built to do just one thing, it can often be made
> simple and yet high-performance for that one thing. When it has to do
> multiple things, there are always more compromises.

It is really difficult to buy something which is really ideal for an amateur radio operating position. Computer hutches/desks tend to be a little on the small side and aren't generally as stoutly built as necessary. For some of us, what worked really well at one point might not be as handy years later, when the amount of gear expands to fill all available space. I used to get by with the old W8YX desk with a 3x5' top. The position I now use is 3x7'. If I relocate, I'll consider a homebrew U-shaped operating position. The room I'm in at present does not lend itself to that.

I am not an attorney or a specialist so I can't answer
this directly. However, you might be able to find what you
want at:
http://www.law.cornell.edu/uscode/18/usc_sup_01_18_10_I_20_119.html

The entire current communications act is available as a PDF
from the FCC at:
www.fcc.gov/Reports/1934new.pdf

I think what you are asking about is the restriction on
discolosing any private communication one might intercept.
This never applied to amateur communication because it is
not, per se, private. It would apply to any commercial
communication you might overhear other than that clearly
intended for public consumption such as broadcasting.
That is, if you can hear telephone conversations from a
wireless phone or similar you may not disclose them to a
third party.
I suspect that like all law there are all sorts of
convoluted special conditions applying to this.

Hi All,
Does anyone have any info, experience, opinions, etc. about the MFJ-998, 1500 watt Intellituner. I am thinking about ordering one for HF operations. BTW, (now I'm bragging) I recently got a mint condition Henry 3002 amp but I haven't installed the 240 V AC wall socket yet. Unless I put up another antenna I will not be able to run it at full output as my cushcraft 215wb is only rated for a KW.
73 all, Ace - WH2T

I was just wondering if that language was still part of the
Communications Act of 1934. I am familiar with all it's ramifications,
as I have been a FCC Resident Field Agent, in the past. Phil
was an FCC Lawyer in California, before he left the Commission,
and I know he will have more current knowledge, about this, than
I have.

The second link, the one to the FCC, has the complete
text of the current act but does not have an index which
makes it hard to look stuff up. I think it runs some 300
pages, if you know what section to look at you can see if
the language is still there. The privacy act may also apply
here and may provide protections not in the communications
act. All this is complicated by the various homeland
security acts which allow the government to do a lot of
snooping, but that does not apply to individuals.
I am also anxious to have an opinion from a lawyer who
specializes in communications law.

192. WPM to BPS calculation

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-18 14:44:27 UTC
From: Klystron <xxx@yyy.zzz>
Message-ID: <xxx-F59B6F.10150818032008@news.verizon.net>
Source record: 3163

I am trying to convert "words per minute" into "bits per second."
Bits per second, in turn, is APPROXIMATELY equal to baud, a common
measure of modem (or other means of data transmission) speed. I need to
quantify one factor: How many letters are in a "word?" If we assume that
there are 5 (five) letters to a word, my calculations look like this:

```
WPM = 50
LPM = WPM * 5 # letters per minute
BPM = LPM * 8 # bits per minute
BPS = BPM / 60 # bits per second
BPS = 33.33
```

I have assumed 8 bits to the byte, which is quite generous
considering that Morse cannot encode an 8 bit character set or, for that
matter, the full ASCII character set, which is only 7 bit.
Can anyone see any obvious errors? Is 50 words per minute really
equal to about 33 baud?

Source record: 3164

Here is how Morse speed is usually calculated:

If the text is typical plain-language English, the test word "PARIS" is used. WPM is the number of times PARIS can be sent in 1 minute, using proper spacing between dits and dahs, letters, and words.

It turns out that the word PARIS and one word space equals exactly 50 "dit times", with a dit time being the length of time the key is closed for a dit. (A dah is three dit times, the spaces between dits and dahs inside a character are one dit time, the spaces between letters are three dit times and the spaces between words are seven dit times.)

So if the word PARIS is sent 50 times in 1 minute, that minute is divided into 2500 dit times. Which is 41.66 bps.

The reason for the difference is that there are so many different timing issues in Morse Code. The elements, characters and spaces are all different lengths, with the most-common characters (like the letter E) being the shortest.

The glue-lam framing industry uses them quite a bit, with a production line making all sorts of very long "timbers" from 2x4s and 2x6s held together by glue that is RF heat-sealed (13.6 MHz ISM stuff) and a flying-arm saw cutting them to length in a continuous process. I got to visit such a plant once, and marveled that everything worked as well as it did.

There are homes now being built near here advertised as "golf course
homes starting in the mid-700s". I understand that most of them are a
Mill or more, and were sold even before construction started. For
some people there is no recession.....

Small shacks they are not - and I'll bet that there are CC&Rs against
putting up ham antennas even by folks with that kind of dough.

Jim,

I'm sure your explanation is correct, but it leaves me confused: I know bps <> baud, but they're close, and the Model 15 Teletype I used to own operated at 45 baud. It seems illogical that Morse would be so high in the bps count.

Comes here the Kane tutorial on Communications Privacy / Secrecy......
<ggg>

First - some definition. "Intercept" means to merely receive the
contents of a communication, not necessarily the same meaning as to
"intercept a forward pass" in football. "Divulge" means to pass the
contents in whole or in part or in meaning to an other person not
authorized by law to receive such contents. "Personal use" means "use
for personal benefit or for the benefit of another not entitled to
thereof" although courts are loath to apply that unless there's a
monetary or similar benefit involved.

Now to the law. There are two sections of law that apply.

Section 705 of the Communications Act of 1934 as Amended [Section 605
of Title 47 of the U S Code] provides that no one receiving,
transmitting, or assisting in either may divulge the contents to
someone not authorized to receive such or make personal use of the
contents. with a whole bunch of exceptions and exemptions.

The Electronic Communications Privacy Act (ECPA), part of Chapter 119
of the US Criminal Code [Section 2510 et seq of Title 18 of the U S
Code] provides that no one not authorized by the sender or by the law
may merely intercept certain types of communication. The violation
exists whether divulgence or personal use takes place or not. This is
the section of the law that provides the illusion of secrecy to cell
phone communications, among others. Again, there are a whole slew of
exceptions and exemptions.

Note that both sections exempt transmissions from amateur, CB, marine,
and aviation stations and communications relating to a disaster, as
well as broadcast programming (AM, FM, TV but not "satellite" TV)
intended for direct reception by the general public.

For more information. "inquire within". This is one of my
specialties.

> the bps count.

The difference has to do with how the coding is done. The following is all from memory:

60 wpm Morse works out to 3000 bits per minute or 50 bits per second using the "PARIS" formula.

Your 45 baud Model 15 Teletype was in all probability what hams called a "60 wpm 5-level Baudot" machine. We had similar machines at the University. (In this post I use the term "Baudot" to mean the 5-level TTY code US hams used for many years until FCC allowed us other codes like ASCII in the early 1980s)

"Baudot" takes 7 bits to send a character: one start bit, five data bits, one stop bit. A space between words is a character, so to send the word "PARIS" would take six characters including the space character. That's only 42 bits, rather than the 50 bits that Morse requires. Thus the difference - the Baudot machine uses 16% less bits to send the same message. The speed difference works out to about 10% because the Baudot stop bit was longer than the others in the machines US hams typically used.

So you don't get the full 16% advantage that you'd expect from the raw numbers. But since only six of the 42 bits are stop bits, the difference is small.

To make it even more of a sporting course, the above WPM advantage of the Baudot machine is message-dependent, same as for Morse. In Morse, the message-dependency comes from the different characters being of different length; a five-letter word like "TENET" takes a lot less time to send than one like "JUICY", while in Baudot they both take the

same time to send.

But in the Baudot code the numbers and some other characters are sent by shifting from "LTRS" to "FIGS", (letters to figures), so sending mixed groups could take a lot of extra characters that Morse does not require.

For example, in Morse you could just send the group "6A8G7" as 5 characters, but to send it on a Baudot machine you had to send "6A8G7", which is 10 characters.

So the WPM are really approximations, and the BPS/baud measures took over.

>operated at 45 baud. It seems illogical that Morse would be so high in
>the bps count.
>

Your Model 15 Teletype at the nominal 60 wpm speed, which is actually 368 chars/minute and 45.45 baud works out like this. The character length is 7.42 bits long (for ancient, interesting reasons I won't go into right now) and the bit duration is 22 milliseconds. The character duration is therefore 7.42 * 22 = 163.24 milliseconds, and that works out to 6.12595 characters/sec = 367.55 characters/minute. To convert that to words you have to figure 6 characters per word because the space between words is also a character. So the speed is actually 61.26 words/minute.

Teletype speed is sometimes confusing because there are a couple of other speeds out there. Western Union liked to use a 7.00 unit character rather than 7.42. With 45.45 baud, or 22 ms pulses, this gives 154 milliseconds/character, or 6.49 characters/second, 389.6 character/min and hence 65.9 words/minute. This is completely compatible with 7.42 unit code because the baud rate is 45.45 for both. But then there is European 50 baud Telex using a 7.5 unit code. This is a 20 millisecond bit for a character length of 150 milliseconds, 6.67 characters/second, 402 chars/minute, 67 words per minute. This is not compatible with the other two codes because the baud rate is different; but if you say something like "66 wpm" you could be talking about either scheme.

Now when you get to ASCII, the old Teletype machines transmitted 8 data bits per character and used an 11.0 unit code. This makes 100 wpm work out to 110 baud. Electronic terminals don't need 11 unit code; they can do just fine with 10. Thus the words-per-minute is numerically equal to the baud rate. 100 baud -> 10 ms/bit -> 100 ms/char -> 10 chars/sec -> 600 chars/min -> 100 wpm.

Morse has already been explained. A Morse dot is actually two bits, since there is the dot followed by the space that makes it distinguishable from what comes next. A Morse dash is four bits, counting the space, and the word space is three dot times or 6 bit times. Then the word PARIS contains 50 bit times counting the space. So one word per second is 50 bits per second and 60 wpm. As an aside, the military sends a lot of encrypted 5-letter code groups, so instead

of PARIS the Signal Corps uses CODEZ as a test word more statistically correct for their kind of traffic. And CODEZ contains 60 bits.

Thank you for your service to our country, Dave. You did that sort of
thing
for how many years, on top of military service?

bwaahaahaa!

Around here, "WAWA" means something completely different: Popular
convenience stores.

I found "The Care And Feeding of Power Tetrodes" free for the
download,
along with lots more Eimac stuff at the BAMA mirror site.

They also have quite a few of the GE Ham News periodicals scanned.

> There is a great difference between a receiving-type
> tube run at relatively low voltages and a high power transmitting tube
> run at high voltages. Their construction is quite different.

Until relatively recently, oxide-coated cathodes could not withstand
high plate voltages,
so tubemakers continued to use thoriated-tungsten filaments for
transmitting tubes
beyond 100-200 W or so. Tube size is another factor; a 3-500Z can
handle more than
ten times the watts of a 6146 but is not ten times the size, so other
methods have
to be employed.

> > Or that, in the case of high-gain glass tetrodes like

> tubes to help in preventing suck-in.

I think the horizontal output suck-in problem was simply caused by
excessive heat
from the plate, in a poorly-ventilated TV.

What is described by Eimac in "Care And Feeding" was the glass being
softened
by electron bombardment of the glass, caused by running the tube
lightly loaded (low
plate current).

> Having the parts to keep something running isn't the
> problem. Storage is.

I could tell ya stories about *storage*....

> I've read articles stating that NASA is having real problem as those

Or are dead. Consider that someone who was, say, 40 years old in 1964
and working on the Apollo project would be 84 today.

> What I might have considered is that
> newer composite decking material which is designed to last for decades.

The composite deck material is great stuff but it's softer than
Corian, and
I didn't have any. Plus I don't think it comes in white. (Note to self
- raid
relative's basement for the rest of the Corian before they decide to
toss it.)

> I'm not familiar with the term "balloon framing". I'm looking it up. I

Yes, that's exactly what caused them. Some folks are left holding the
bag.

> > It is not unusual around here to see a perfectly good house from the

>
> I can't really understand the "up in arms" part because we really having
> a surplus of existing housing in the country.

What they're up in arms about is that houses in the $300,000 -
$500,000
range are being replaced by houses worth double that or more, on the
same lots. That drastically reduces the number of people who can
afford
to even think about buying them. During a downturn those houses become
unsellable.

On top of that, they tend to increase the impervious surface
percentage of
the lot, so there's more stormwater runoff when it rains. Which floods
the
folks downhill, who were never flooded before, and increases erosion
issues.

> > The amateur radio connection to all of this is that often the house

I hope and pray I will never have to consider living in one of those
places, but
as time goes on and more old houses are torn down and replaced by
radio-
unfriendly CC&R'd places, the options decrease.

> We're sitting on an acre. • If we re-locate, I'd be happier with 2 or
3

Because he's not really paying for heating or cooling; he's paying to run pumps.
A few of the locals here have gone to geothermal; it works. The main problem
is the first cost.

> > Beautiful, just beautiful..

I have considered those. If they will fit flat in the current vehicle they have
possibilities. And again they are multi-use; they won't just be for FD.

s
> not lend itself to that.

I don't think anything off-the-shelf is really suited for more than a
very small
ham shack. One problem is depth; the equipment needs to sit pretty far
from the op
but the usual 24-30 inch table or computer desk isn't deep enough.

It really is time for new shack/shop furniture for me. The Southgate
Radio team is
on it....

Sixteen or so, Jim. Whenever one of my Foreign Service colleagues would
gripe about one or another of the African privations, I'd usually add,
"well, at least they aren't shooting at us."

I don't see how that view could be taken. I always had nothing but
admiration for the fellow who homebrewed all or part of his rig.
One of the OT's from Cincinnati had a great station consisting of a
solid-stated National HRO-50 and homebrew SSB transceiver and homebrew
amp. G2FIX's copy of the Collins S-line was some of the most beautiful
homebrew work I've ever seen. I have photos of it somewhere on the web.
If you Google "G2FIX" you may find it on the site of an ex-G living in
5-land.

Tom Rauch W8JI has presented quite a bit of excellent data. He's been
designing linear amps for several companies for quite a number of years.
He once helped me troubleshoot I was having with a burned up plate choke
in an AL-1200 Ameritron amp via telephone from 5,000 miles away.

There's lots of good material there.

> They also have quite a few of the GE Ham News periodicals scanned.

I found those. I think that's where I found a pdf of the vintage
Hammarlund clock face. I bought a nice looking HQ-180 a few years back
from the newspaper classifieds. It never had a clock installed. I
printed the clock face from the pdf and bought an inexpensive 24 hour
battery powered movement with appropriate hands from some web site.
Of course it won't turn the rig on as the original clock, but those
movements are pretty hard to find these days.

Yep, and unlike 6146's, those bottles will show red when run within
their designed ratings.

I think a Doug DeMaw amplifier article (later reprinted in the Handbook)
showed how the same problem could crop up in a sweep tube amplifier.

> What is described by Eimac in "Care And Feeding" was the glass being
> softened
> by electron bombardment of the glass, caused by running the tube

Right. I don't think anyone could argue that Eimac knew power bottles
inside and out.

>> Having the parts to keep something running isn't the
>> problem. Storage is.
>
> I could tell ya stories about *storage*....

The radio overflow here is in a 16x30 foot Amish barn we had built. It
isn't inconvenient unless it is snowing or, like today, raining heavily.

I don't think I've seen the composite decking in white and yes, grab the
Corian scraps.

Yeah, I recall early handbook articles about 20 foot California Redwood
1x2's or 2x4's. Here in the East, I never saw any of that stuff in
lumberyards.

>>> We call them "McMansions" in these parts.

Well, I consider that a bag of their own making. They tried to buy more
house than they were really able to afford and they opted for those
variable-rate loans. They seemed to have forgotten that the rates could
go up as well as down.

>>> It is not unusual around here to see a perfectly good house from the

That's too bad. That's perhaps one of the reasons why I don't want to
live too near a larger city.

I think we've been spoiled by living out here. It is incredibly
quiet--especially in the evenings/nights. The radio quiet is
phenomenal. The dark skies make for some really great astronomical views.

>> The "how houses are built" part is what I meant to address. Things like

I think the things typically run about $10k or so additional over the
cost of a new house with conventional heat.

I know you said "inquire within" but I hope that this is a short, general-interest question with perhaps a one-word answer. (Except I don't think I've ever seen Phil give anything approximating a one-word answer <grin>).

Phil Kane wrote:

> Note that both sections exempt transmissions from amateur, CB, marine,
> and aviation stations and communications relating to a disaster, as
> well as broadcast programming (AM, FM, TV but not "satellite" TV)
> intended for direct reception by the general public.

What does "exempt" mean in this context? Does it mean that the provisions do not apply at all if the information is transmitted by amateur radio? I'm assuming that this is the case, since it's not unusual for material that we relay to appear in news articles.

Thanks, Phil... I was sure that you would have the information.
Now the final question, that everyone wants to know, BUT was afraid to
ask.....

Have you ever heard of ANYONE, ever being prosecuted for Violation
of Section 705 of the Communications Act of 1934.......

> > convenience stores.
>
> I'm almost afraid to ask for details.

"Wawa" is the local Native American word for what we call a Canada
goose, aka "water pigeon".

Wawa started as a dairy, and to this day there's a small herd of dairy
cows at corporate Hq, in Wawa, PA.
They were big in the milkman/delivery biz in this area.

But in the 1960s, even though business was good, they realized those
days of direct delivery were ending, so they transformed the company
and began opening stores. Originally they handled mostly dairy and a
few related products, but over time the branched out into other
convenience products like hot coffee, made-to-order hoagies (ordered
from a touchscreen) and hot sandwiches, breakfast stuff, deli, etc.

Latest New Thing is the addition of gas pumps where they can get the
land and permits. The gasoline plaza is adequately separated from the
store for good traffic flow, yet not too far to walk easily.

It is not unusual for a vehicle to pull up to a gas pump, and while
the driver fills up, the passenger goes into the store to order
hoagies, get coffee, etc. Service is so good that the passenger is
usually out of the store and back in the vehicle with the goodies
before the driver is done pumping gas - even at rush times like
morning and lunchtime.

The ham radio connection to all this is that the stores are designed
and operated for maximum customer convenience and speed. I have gotten
several ideas for the shack/shop from Wawa stores.

> > Yet some would look down on it as "junk" and "a kludge".

A true master performer is RT. I have a recording of "Bee's Wing".
You'd
think it was a studio recording from the performance and sound
quality,
and that they must have picked the best out of a dozen takes. Yet it's
from
the Philly Folk Festival, live and outdoors.

Truly great performers and operators have a lot in common...

> > No matter; the important thing is that knowledgeable folks have
> > presented valid data.

> I think a Doug DeMaw amplifier article (later reprinted in the Handbook)

> showed how the same problem could crop up in a sweep tube amplifier.

Yes, and they showed how to design for maximum cooling using a simple
fan. Forced-air was a must.

They liked the Compactron-based tubes like the 6KD6 because they had
the suppressor/BF plates
brought out to a pin, so they could run grounded-grid without doing
the kind of surgery needed by
1625s and such. Those sweep tubes *were* also plentiful, inexpensive,
and worked well with
low voltage/high current B+. The article I remember used a link-
coupled output tank (!) instead of
a pi-net because the output impedance was so low.

It
> isn't inconvenient unless it is snowing or, like today, raining heavily.

At one point I had stuff in the attic, the garage, the shack, the
shack ceiling,
under the deck, and in three different remote storage sites (only one
of which
charged me rent). That's been greatly simplified in the past few
years.

> > We used to be able to get up to 20 foot 2x4s but you paid a premium

You have to remember that before WW2 lumber was quite a different
commodity; it

was inexpensive and plentiful compared to today. A "2x4" was a lot
closer to 2" by 4" then,
too.

> > Yes, that's exactly what caused them. Some folks are left holding the

uld
> go up as well as down.

The problem IMHO is that, in the old days, lenders and lending
regulations
were very conservative and would protect the homeowner from him/
herself.
That's all changed now, but a lot of folks don't/didn't realize it.

The big problem right now is that the *lenders* dug themselves a great
big hole
and now can't figure a way out. They bet on constantly-rising RE
prices, so
that they'd make money even if a house foreclosed. Then the market
changed...

> > What they're up in arms about is that houses in the $300,000 -

o

> live too near a larger city.

They are no longer limited to cities. Acquaintance of mine went
looking for the dream-retirement location, found a developer building
custom homes in Colorado. Perfect setup for ham radio, lots of three
acres and up. And a ton of CC&Rs, including no antennas.

iews.

I used to live just north of the Finger Lakes region of New York
State. (That's why
I have a 2-land call). I owned 46 feet of
the original Erie Canal at one point. I know what you mean.

> I think the things typically run about $10k or so additional over the
> cost of a new house with conventional heat.

Depends on how deep they have to drill to get the needed groundwater,
and what they have to drill through.
But such is the future, for those who will look.

Right. That happened in Dar es Salaam in 1998. I was here, between
assignments and arrived three weeks after the bombing. The only
shooting which went on at the site of the temporary embassy site was
when a drunken Tanzanian soldier fired three or four rounds from an
AK-47 into the ground. The Tanzanian army was detailed to protect the
temporary embassy after the company of U.S. Marines departed. I never
did get very comfortable coming up the drive with a sleeping Tanzanian
soldier manning the tripod-mounted machine gun in the front yard of the
place.

I ran across the web site and e-mailed the fellow who put it up. I told
him that I'd met Bert in the 70's while vacationing in Salisbury and
that I had more photos of him. He asked if I would be willing to send
the scans to him and allow him to post them on his site. Bert was a
fine fellow and heavily involved in the Royal Signals club, mobile
rallies, FOC and, as you've seen, in homebrewing.

>>> Perhaps the Type 8 will have a dimmer pot.....

There's another site--something about technical books online--where I
was able to download pdf's of old GE, Sylvania and RCA tube manuals
(including a '38 RCA transmitting tube manual) along with early editions
of the Radio Handbook and the ARRL Handbook.

>>> They also have quite a few of the GE Ham News periodicals scanned.

My Omni VI had one but the Orion does not. I have a 24 hour clock atop
the amp, one in the computer and one of those "atomic clock" things
hanging on the shack wall.

>>> Tube size is another factor; a 3-500Z can

Yep, and the carbon anode versions of the bottles will show at least a
dull red.

Heath and Drake were able to use simple fans to cool the SB-220 and the L-7 with air blown laterally across the tubes, even at the kilowatt level. I prefer Eimac Air System sockets and chimneys or variations thereof.

> a pi-net because the output impedance was so low.

Yep. Quite a number of manufacturers were making sweep tube amps during the period when tube-type televisions abounded. P&H, WRL/Galaxy, SBE and Yaesu come to mind. A couple of others (Dentron and Ameritron) continued well past the time when those tubes were being used in TV sets. It is hard to find finals for those amps these days and the current "cheapy" amps are using Russian or Chinese copies of 811A's or 572B's.

I had everything in the basement when I lived in Cincy. Prior to that, I'd generally have a corner of a room as a shack or a part of a basement, with parts stuffed into a closet. My current shack consists

of two rooms in the old part of the house. I have a separate staircase
and the main shack (about 16x16') and an adjacent room (about 16x12').

That's right. There's a lot of the full dimensional lumber used in this
place. Some of it is even oak. Our main staircase is an open design
using full dimensional oak 4x4 stock with oak planks.

> Ah, but in what price ranges?

In this area there are still many homes in the $150-170k range being
built. One can find many existing homes in the 50-90k range. Out here
near Cameron, it is possible to buy a perfectly good house for under 30k.

>>> I hope and pray I will never have to consider living in one of those

That's not *my idea* of a dream. I'm sure there are plenty of spots
within that state where it is possible to buy some land and built a
house, not that I'd want to.

"I've got a mule and her name is Saaaal..."
That has to be pretty territory.

My guess is that not many folks have the opportunity to do terribly much about choosing a home based upon amateur radio until they retire. It'd be tough to find yourself interersted in becoming a radio amateur after you'd already bought a place in one of those developments under covenants and restrictions.

> and what they have to drill through.
> But such is the future, for those who will look.

I may be mistaken, but I don't think any groundwater is used at W8RHM's place. His is a horizontal system and I believe it uses air. I'll have to ask. It surely doesn't cost much to heat air fifteen or sixteen degrees higher or cool it up to thirty or forty degrees lower than ambient Earth temperature.

>>> What is this "paint" of which you speak?
>> You never use paint?
>
> I prefer varnish.

Ahhh! Well if you have crappy-looking stock to begin with, you can fill the blems, sand it smooth and, after painting, you'll have an attractive piece. If you just cover the blems with varnish, you'll be able to look right through it and see the blemishes.

>Have you ever heard of ANYONE, ever being prosecuted for Violation
>of Section 705 of the Communications Act of 1934.......

There are a lot of cases brought under Section 705, most having to do
with theft of satellite TV programming or bootleg cable TV
descramblers which are covered by other subsections of Section 705.
One curious case involved a subscription-TV provider who enabled
Canadian providers to intercept its signals as opposed to a Canadian
program supplier competitor, the case being brought on complaint of
the Canadian government because the violator and the site of the
violation was in the US.

Most of the cellphone or cordless phone interception cases are brought
under the Wiretap Act (the ECPA) of the U S Criminal Code, Title 18.

The most famous case of off-the-air interception and divulgence
involved a conversation between certain officials of the Republican
party which was passed to "others", but long before that there were a
few cases of taxicab radio interception by competing cab companies
whose drivers "jumped" calls.

There's a certain British approach to engineering and craftsmanship
that is underappreciated on this side of the pond IMHO.

For example, the BBC was doing regular scheduled electronic TV
broadcasting in 1936-37, and only shut down when WW2 broke out.

They invented things like the re-entrant multiple cavity magnetron,
practical jet engines, the dambuster bomb and delivery system (fly a
Lancaster 50 feet off the water at night? No problem!) and much more.

I have an RSGB handbook from the 1960s. It's quite different from the ARRL Handbooks of the time - more technical, more projects, more advanced and varied stuff. But nothing on operating, history, licensing, or the RSGB.

For example, the phenomenal G2DAF receivers, particularly the last version. Incredible sophistication and performance.

Of course part of that was the different economics of homebrewing in Europe at the time.

For years I had a BC-348R, and the book. Took it many places, acquired two parts units. Sold 'em when I moved from the house on RadioTelegraph Hill.

I kept the BC-342-N that I bought for two dollars at a hamfest in Wrightstown many years ago.

Pete Millett's site. All kinds of stuff. There's also Frank's Tube Data Pages.

> • I have a 24 hour clock atop
> the amp, one in the computer and one of those "atomic clock" things

> hanging on the shack wall.

I have a classic Numechron Tymeter 24 hour digital clock for the shack. It was made from parts of three junkers back in the 1980s and runs perfectly today. I might have three dollars invested in it.

What did P&H make? The only product of theirs I remember was the LA-400, which used four surplus 1625s doctored so the BF plates had their own base pin and could be grounded. Not all brands of 1625 could be converted like that, but some could.

Yup. There are also conversions of those old amps to use other tubes, mostly Soviet types. Some amps like the Heath SB-230 can often be had for a song because the tube they use is so expensive and hard to find.

Back in the 1960s the ARRL Handbook had a single 3-1000Z amp that still looks good today. In inflation-adjusted dollars it probably costs less now than it did then.

NICE!

In the house on RadioTelegraph Hill, everything was in the basement.
But it was a big basement. (sigh) Less room here.

"Fifteen Miles on the Erie Canal."

Centerport - Port Byron - Lock Berlin - Port Gibson - Wayneport -
guess where those place names came from?

> That has to be pretty territory.

The best. Plus to the south are the drumlins and the lakes. Winters
are tough but the folks there are used to them.

> My guess is that not many folks have the opportunity to do terribly much

That is one of the major challenges facing amateur radio today. If
someone is already a ham, they should know enough to avoid buying a
restricted place. But how many people will move just to have an

outdoor antenna?

I did some research and found there are several types of system.
Groundwater is only one type, popular on small lots where there's no
room horizontally.

Where there is enough land, what is done is to bury a field of pipes
and run water through them.

I don't use crappy-looking stock where it will show....

The first table I built, way back in the early 1970s, was made from
the wood in old shipping pallets. These were *old* pallets, and the
wood in them was incredible. I had access to a radial arm saw and a
planer, and made my own stock.

Somewhere here in the shack, I have a little green hardbound book on
Baird's work.

You can make up for that lack of info if you can find a wonderful book
from the 70's called, "The World at Their Fingertips".

> For example, the phenomenal G2DAF receivers, particularly the last
> version. Incredible sophistication and performance.

Really great designs. He kept at it for a long time. He provided many
mods for commercial rigs like the Yaesu FT-101 series.

> Of course part of that was the different economics of homebrewing in

That's another worthy receiver. My old pal K8IP had the '348Q. It's a
real keeper. Over the years I've had a number of the 342's, 312's and
348's.

I used to have one of those and would love to find another. They're
getting rather pricey these days. I'm happy to report that I have less
in my atomic clock than you have in your tymeter. My neighbor bought it
new and gave it to me when the outside temperature transmitter quit
working. I found a web site where I can order the transmitter for ten
bucks postpaid.

That's right. P&H's later offering was a low profile, chrome plated
until called the P&H Spitfire--the LA-500M. It used six 12JB6's at 500w
input and was introduced in the early 60's.

One of the most modified is the old Dentron MLA-2500 which used
expensive and hard to find metal ceramics. Svetlana published a mod
using a pair of their modestly priced metal ceramics.

> Back in the 1960s the ARRL Handbook had a single 3-1000Z amp that

Those bottles are hard to come buy these days. I think it is hard to
beat a pair of 3-500's for legal limit or near legal limit power.
They're relatively inexpensive, can be used with or without the air
system chimneys and sockets and the graphite anode variants are quite
rugged.

>> near Cameron, it is possible to buy a perfectly good house for under 30k.
>
> Boy do I want to move! But one has to go where the jobs are.

...right up until retirement time rolls around. Then you're free to
live where you like.

>>> They are no longer limited to cities. Acquaintance of mine went
>>> looking for the dream-retirement location, found a developer building
>>> custom homes in Colorado. Perfect setup for ham radio, lots of three
>>> acres and up. And a ton of CC&Rs, including no antennas.
>> That's not *my idea* of a dream. &#65533; I'm sure there are plenty of spots
>> within that state where it is possible to buy some land and built a
>> house, not that I'd want to.
>
> He looked elsewhere. Point is, you'd have thought places like that

> would not be CC&R'd but they were.

I've been going through realtors listings for the southern part of this
state, getting an idea of what's available and what prices are
like--this for our eventual sale of this place to the approaching
longwall coal mine. I'm not bookmarking any homes which are in
subdivisions.

>>> I used to live just north of the Finger Lakes region of New York
>>> State. (That's why
>>> I have a 2-land call). I owned 46 feet of
>>> the original Erie Canal at one point. I know what you mean.
>> "I've got a mule and her name is Saaaal..."
>
> "Fifteen Miles on the Erie Canal."
>
> Centerport - Port Byron - Lock Berlin - Port Gibson - Wayneport -
> guess where those place names came from?

Gee, Jim, I don't know--the Eric Canal?

>> That has to be pretty territory.
>
> The best. Plus to the south are the drumlins and the lakes. Winters
> are tough but the folks there are used to them.

I think you mean that they've learned to put up with them.

>> My guess is that not many folks have the opportunity to do terribly much
>> about choosing a home based upon amateur radio until they retire.
>
> If then!

Most but "stay putters" have the option. You needn't sell the XYL on an
antenna farm. Practice saying things like, "plenty of room for a
garden" and "park-like setting".

>> &#65533; It'd
>> be tough to find yourself interersted in becoming a radio amateur after
>> you'd already bought a place in one of those developments under
>> covenants and restrictions.
>
> That is one of the major challenges facing amateur radio today. If
> someone is already a ham, they should know enough to avoid buying a
> restricted place. But how many people will move just to have an
> outdoor antenna?

There are always guys like me. *grin*

>>>> I think the things typically run about $10k or so additional over the
>>>> cost of a new house with conventional heat.
>>> Depends on how deep they have to drill to get the needed groundwater,
>>> and what they have to drill through.

>>> But such is the future, for those who will look.
>> I may be mistaken, but I don't think any groundwater is used at W8RHM's
>> place. &#65533; His is a horizontal system and I believe it uses air. &#65533; I
> 'll have
>> to ask. &#65533; It surely doesn't cost much to heat air fifteen or sixteen
>> degrees higher or cool it up to thirty or forty degrees lower than
>> ambient Earth temperature.
>
> I did some research and found there are several types of system.
> Groundwater is only one type, popular on small lots where there's no
> room horizontally.
>
> Where there is enough land, what is done is to bury a field of pipes
> and run water through them.

Okay.

>>> I prefer varnish.
>> Ahhh! &#65533; Well if you have crappy-looking stock to begin with, you can f
> ill
>> the blems, sand it smooth and, after painting, you'll have an attractive
>> piece. &#65533; If you just cover the blems with varnish, you'll be able to l
> ook
>> right through it and see the blemishes.
>
> I don't use crappy-looking stock where it will show....
>
> The first table I built, way back in the early 1970s, was made from
> the wood in old shipping pallets. These were *old* pallets, and the
> wood in them was incredible. I had access to a radial arm saw and a
> planer, and made my own stock.

There's an idea for a guy who needs a sturdy but inexpensive table for
the shack. A couple of local outfits near here have so many pallets
that they are constantly running ads in the local paper for "free wooden
pallets".

Dave K8MN

213. Any Civil War reenactors on here?

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-20 14:07:40 UTC
From: rramQRM@timesucker.homelinux.org
Message-ID: <E1Jc5F8-0003DQ-Uu@billhorne.homelinux.org>
Source record: 3184

Thanks for reading this.

I have a number of Sounders, some old keys, and some relays from the American Morse landline era. It occured to me that I might take up reenacting as another hobby, but when I asked my sister, who makes clothing for reenactors, "What does it cost?", she casually mentioned "Less than a thousand".

So, I'm looking for a discount version: I've got enough invested in _this_ hobby. ;-)

Please answer these questions:

1. Would I have to have perfect replicas of the clothes, etc.? I'm just interested in the telegraphy, and civilians used to do that as well as the military, so reenacting as a civilian would be fine.

2. Does all the telegraph gear have to be authentic to the period? I'd tend to doubt it, simply because instruments _that_ old would be too valuable for use in the field.

3. Who can I talk to for help without spending a day doing research online?

Thanks for any information.

73, Bill W1AC

214. LQQKING for some info

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-20 17:41:14 UTC
From: Howard W3CQH <hsgorden@comcast.net>
Message-ID: <7ZmdnYr6pYo0A3_anZ2dnUVZ_tqtnZ2d@comcast.com>
Source record: 3185

I am looking for a small portable laptop about the size of a DVD player, with minimum Hard drive size and some memory, something I can load XP on, and that has a USB port, has a close to possible full size keybd, a sound card, and runs on 12v battery and/or on a 12v power cord I can plug into a cigarette lighter.

I want to be able to run some of the HAM digital modes while in the field and don't want to schlep a heavy laptop around.

I heard that something like this might be available, for a street price of less than or around $250.00, but I have lost the reference page to it.

==> HAMS ON HAND AS TORNADOS SWEEP THROUGH GEORGIA, DOWNTOWN ATLANTA

When tornados swept through Georgia this past weekend, Amateur Radio operators were on hand to assist where needed. On Friday, March 14, an EF-2 tornado touched down in downtown Atlanta at 9:38 PM (local time). The National Weather Service said the twister was 6 miles long and 200 yards wide. Downtown Atlanta was a busy place that evening; not only was there a professional basketball game, college basketball fans were in town for the Southeast Conference tournament at the Georgia Dome. Due to the tornados, the final college game of the day was postponed until the next day. According to reports, the tornado blew off portions of the roof of the Georgia Dome.

An EF-2 tornado has wind speeds from 111-135 MPH. In such a tornado, roofs are torn off well-constructed houses, foundations of frame homes are shifted, mobile homes can be completely destroyed, large trees are snapped or uprooted, light-object missiles are generated and cars can be lifted off the ground.

ARRL Georgia Section Manager Susan Swiderski, AF4FO, said "William Chandler, KG4JTK, went from house to house in the wind and the rain checking for any injuries in the homes that had sustained damage by falling trees and debris. At the same time, he issued reports via radio to Barry Kanne, W4TGA, the Emergency Coordinator for neighboring DeKalb County, regarding fallen trees, billboards, power lines and other threats to public safety. Barry relayed this information to the Atlanta 911 center and to the Grady Hospital Emergency Operations Center." DeKalb County is directly to the east of Fulton County; Atlanta is the county seat of Fulton County.

The City of Atlanta Web site reported that "[e]xtensive damage has been reported to a number of landmark buildings in downtown, including the Omni Hotel, Georgia World Congress Center, CNN Building, the Georgia Dome and Phillips Arena and homes and businesses in nearby neighborhoods." The Red Cross opened a shelter at Central Recreation Center. There was "no external damage" to Hartsfield International Airport.

Eyewitness accounts said that "huge hunks of metal and broken glass were everywhere [in Atlanta], as well as overturned cars and benches in the road. Olympic Centennial Park is a mess." The high winds caused major damage to several other landmarks including the Georgia World Congress Center. Many hotels and office buildings had their windows blown out. Grady Memorial Hospital, the major trauma center for the Atlanta metro area, had its 100 foot tall communications tower blown off the hospital roof, disabling communications with emergency medical personnel.

ARRL Georgia Section Traffic Manager Charles Pennington, K4GK, served as Net Manager during the storms: "After several hours of recovery and damage assessment, it became obvious that while Atlanta had received major damage to downtown area, there were no fatalities reported and amazingly only 21 persons were treated for injuries." Two fatalities were reported in northwest Georgia.

In Effingham County, near Savannah on Georgia's coastline, Swiderski said a tornado "took down six power towers during the annual St Patrick's Day celebrations," thrusting the community into "total blackout conditions."

"A local 2 meter SKYWARN net, with Greg Tillman, N4VAD, serving as NCS, provided a vital link with the staff at Memorial University Medical Center in Savannah. Dr Ra Meguiar, N4RVM, a physician and senior hospital administrator, later sent a letter of appreciation in recognition of the local hams 'for staying with us through the weather and the power outage.' He said that this was his first experience in participating in a severe weather net and the 'support was invaluable,'"

Swiderski said.

According to Swiderski, reports came mostly through the linked repeater system, "usually from a liaison from one of the many local nets that were going on in county after county, but there were also reports from stand-alone hams who had the misfortune of being in an affected area. There were reports of wall clouds, funnel clouds and hailstones -- large hailstones, sometimes as large as baseballs."

Tillman said that two mobile homes were completely destroyed and one was "tossed like a rag doll, rolling over numerous times 100 feet from its foundation where the anchors were pulled up from the ground." Nearly a dozen other homes and automobiles were damaged; five people from Effingham were transported to the local hospital for treatment and evaluation, he said.

"In some of the counties, this event was a true 'baptism under fire' for brand new Emergency Coordinators," Swiderski said. "I'm pleased to say that they all conducted themselves and all of the challenges admirably."

==> STATION LOCATOR SERVICE NEW FOR FIELD DAY 2008

This year, for the first time, the ARRL has put together a Station Locator to help amateurs or those interested in Amateur Radio find a Field Day site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years.

If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

To help you out, Henderson has prepared a FAQ for the Field Day Station Locator.

Q) How does our Field Day site get listed on the map?
A) A club official or Field Day Chairman needs to go to the Web site. Once there, click on the link for "Add a Station" and follow the instructions.

Q) I put in the name of the park where we will be holding Field Day but got the message that the program can't find it. What do I do?
A) You should use a street address for the location. Unfortunately, the mapping program doesn't have a 100 percent complete database of park names and public site names. You may use a latitude/longitude -- enter the values separated by a comma (e.g. 42.345N, 85.445W) and set the city to NONE).

Q) I put in a street address but the map locator put me it in a wrong location on the street. What do I do?
A) While in the data input or edit screen, use your cursor to move the red "pin" to the correct location on the map.

Q) What if I put in the wrong information or something about our Field Day operation changes?
A) The person who input the data will be able to edit the entry. Simply follow the "Add a Station" link and then select "Edit this entry" next to the one to correct.

Q). I tried to enter my club's information, but I was denied access. What do I do?
A) To help ensure that only one person is managing a club's entry, you must be logged onto the site with your ARRL member ID and password. If you are not an ARRL member, ask a member of the club who is to be responsible for adding the club's information to the site.

Q) I am looking for a Field Day operation to attend. How do I use the site?
A) Begin by typing in the city and state where you would like to search, something like "Brooklyn, New York" or "Anaheim, California." Depending on the geographic location, the map will take you to the area you list. If a Field Day operation has been registered for that general area, a red "pin" will show on the map. If you click on the red pin, the details for that site will appear in the box on the right hand side of the screen. If you don't see a red pin, scroll out a level to find one near the location you listed. It is also possible to drag the map to other areas by holding down the left button on your mouse and then moving the map around. You can also scroll in and out using the +/- buttons on the left side of the map. You may also zoom in and center by double-clicking with the mouse near the red pin.

Q) I found a red pin near where I will be. Where do I find the information on that site?
A) Each entry has a contact person with either an e-mail address or phone number who should be able to help you. It will appear on the right side of the box when you click on the red pin for an entry.

Q) I found an entry with wrong information. What should I do?
A) Please contact the person whose name appears as the contact person for that site. ARRL HQ does not have detailed information on the site.

Q) I want to check on our club's information. What should I do?
A) Type in the call sign that will be used and you will be taken to the location and club information.

ARRL Field Day will be held June 28-29. For more information, please visit the Field Day Web page <http://www.arrl.org/fieldday>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Jeff Otto, WA1QYW, of Framingham, Massachusetts, asks: I have a new SSB transceiver, and I noticed something peculiar. When I tune to an empty frequency, say on 20 meters, with absolutely no signals

and only noise, and I switch the mode between USB and LSB, the received "tone" of the background noise changes. On one position, it sounds like it consists of more high frequency components, and on the other position it sounds like more low frequency components. I would have thought that white noise would sound the same, regardless of which sideband is being received. In normal SSB operation, this effect is not really noticed. I'm wondering if there is some sort of a misalignment in the radio.

The Doctor Answers -- Jeff, I agree with your diagnosis. Switching between USB and LSB switches the "BFO" or injected carrier frequency from one side of the SSB filter bandwidth to the other. There are a few exceptions, notably the early RL Drake tube transceivers that kept the same BFO frequency but switched the filters. Switching the BFO frequency is generally cheaper than having two filters.

There are two possibilities: One, that the shape of the filter passband is not flat. If it's higher on one side than the other, that will translate to stronger high frequency response on one sideband and stronger low on the other.

The other, and I would say more likely, possibility is that the BFO oscillators are not spaced the same distance from the edge of filter bandwidth. In one case you might have (with a 2.1 kHz filter, for example) with 200 Hz offset, an audio response from 200 to 2300 Hz, while the other sideband if spaced 400 Hz will have a response from 400 Hz to 2500 Hz. The usual design response is from 300 Hz to 300 + the filter bandwidth.

You can test this by using a good low-level audio generator in the microphone input (set to the same level as the mic audio), and checking the response at the audio monitor jack, if your radio has one. You could also check with another receiver, but unless it is very wideband, you would really be measuring the combination of offsets and filters in both radios.

If your transceiver has a PASSBAND TUNING or IF SHIFT control, you can move it to make the receive audio sound the same on either sideband, but that won't help on the transmit side. If it's not very different, and if you get good audio reports on both sidebands, you could also just pretend you hadn't noticed!
==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Rate Sheet (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the IARU E-Letter.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate

to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==> NATIONAL HURRICANE CONFERENCE SET FOR APRIL

The 30th Annual National Hurricane Conference <http://www.hurricanemeeting.com> begins on March 31, running through April 4 at the Rosen Centre Hotel in Orlando, Florida. This annual event brings together many disciplines in the Emergency Management field to address tropical events that impact the United States.

Once again, Amateur Radio is being highlighted on Tuesday, April 1 in a 4.5 hour training session. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, is the Chairman of the Amateur Radio Committee of the NHC, and has put together what he calls "a worthwhile learning experience for the attendees."

Leading off the afternoon will be a presentation on Amateur Radio and the National Hurricane Center (NHC) Station WX4NHC <http://www.fiu.edu/orgs/w4ehw> by John McHugh, K4AG, and Julio Ripoll, WD4R, the Amateur Radio Coordinators at the NHC <http://www.nhc.noaa.gov>. The VoIP Hurricane Net <http://www.voipwx.net> will then be highlighted in a presentation by Rob Macedo, KD1CY, Director of Operations.

The final formal presentation of the afternoon will be the subject of Macedo's and Dura's "Emergency Management's use of Amateur Radio for Situational Awareness and Disaster Intelligence." This discussion is focused on the Emergency Managers and their staff to give them clear concepts to include Amateur Radio in their operational plans beyond the more traditional uses of emergency traffic handling. As time permits, the afternoon will conclude with an open forum on current issues in Amateur Radio's response to tropical events.

==> EMCOMMWEST COMING TO RENO IN MAY

EMCOMMWEST 2008 -- an ARRL specialty convention devoted entirely to emergency communications -- is coming to the Circus Circus Hotel Resort in Reno, Nevada May 2-4.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, will host an Emergency Communications forum and deliver the keynote address. Gordon West, WB6NOA, will be the special guest for the Saturday night banquet; West will also bring his mobile communication unit and present an "Introduction to Emergency Communications" forum on Saturday. Special Counsel of the FCC's Enforcement Bureau Riley Hollingsworth had been scheduled to make an in-person appearance, but instead will attend EMCOMMWEST via a special video presentation.

The Reno Spring Hamswap will be held on Saturday, May 3 starting at 6 AM, adjacent to the hotel (corner of Sixth and Sierra). Everyone is invited to swap and sell. Unlike last year, there are no charges for buyers or sellers. Bring your own tables or swap out of the back of your vehicle.

There are four tracks of programs currently scheduled for EMCOMMWEST: General/Technical EmComm (covering public relations, hazmat awareness, recruiting EmComm teams and more), EmComm 101 (including an introduction to Emergency Communications, Net Control Station training, message handling training, EmComm go-kits and a message handling competition), EmComm Served Agencies (including a weather spotter class, emergency operation centers, search and rescue, Salvation Army, MARS and CERT), and Education and Recruiting (including a Technician "Ham Cram" and VE sessions). The Ham Cram is for anyone interested in obtaining their Technician class license without suffering through a classroom environment.

There will be a special event station, N7Z, on HF, UHF and VHF. A special QSL card will be available.

Registration is now available online via the EMCOMMWEST Website <http://www.emcommwest.org>. Special room rates are available from Circus Circus <http://www.circuscircusreno.com/>. Please visit the EMCOMMWEST Web site or e-mail <info@emcommwest.org> for more information

==> EMMETT FREITAS, AE6Z (SK)

Emmett Freitas, AE6Z (ex-W6OIA), known as "Shorty" to his friends, passed away February 23. An ARRL Life Member, Freitas was on the Volunteer Examiner team that administered the first Amateur Radio license test session on August 31, 1984. He went on to participate in a total of 548 test sessions. Freitas, a US Navy veteran in WWII, served as a Chief Petty Officer (Radioman) on the USS Parakeet, as well as other duties in and around the Panama Canal Zone, the Galapagos Islands, Ecuador and Lakehurst, New Jersey. A memorial service was held in his home city of San Jose, California on March 7.

==>SOLAR UPDATE

Tad "But by the Sun-spark on the sea" Cook, K7RA, this week reports: ARRL Headquarters is closed for Good Friday on March 21, so this bulletin is coming out a day early, and on the vernal equinox. We had a few more days with visible sunspots over the past week. Sunspot numbers on March 15-17 were 12, 12 and 11. Over the past month, we seem to have a single sunspot appear for a few days, then fade away or rotate out of view, then another pop up after four or five days. Projection for the near term is planetary A index of 5 for March 20-24, then 10, 20, 25, 20 and 8 for March 25-29. There are similar returns to planetary A index of 25 predicted for April 5, April 23 and May 2, but otherwise quiet. Geophysical Institute Prague predicts quiet to unsettled conditions for March 21, quiet March 22-24, unsettled March 25 and active March 26-27. For more information concerning radio propagation, visit the ARRL

Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the ARLHS Annual Spring Lites QSO Party from March 21-30. The NCCC Sprint is March 21. The BARTG Spring RTTY Contest is March 22-24. The UBA Spring Contest (2 Meters) is March 23 and the SKCC Sprint is March 26. Next weekend is another running of the NCCC Sprint on March 28. The CQ WW WPX Contest (SSB) is March 29-30. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 23, 2008, for these online course sessions beginning on Friday, April 4, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News

<http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I saw the very same thing a few weeks ago in the news paper on sale at
Fry's for just about $250 w/o software. I was unable to locate it on
their website, and I don't remember the manufacturer name.

These little boxes open up a whole new world if you ask me. They are
not much bigger than a DVD drive, are powered by 12V DC and draw a bit
over 1 amp. They would make a cool station computer and take up very
little space. They could operate off of battery power easily and are
quite capable machines.

Oh,

One more thing I saw in QST you might be interested in. Some guys
have a "build it yourself" portable device that was set up to do some
HF digital stuff. It was based on a couple of PIC's and if I remember
right could be built for less than your $250. You just plug in a
keyboard and wire the thing to your portable radio and volia PSK is
yours w/o a computer.

Searching for it on the ARRL's website says it's on Page 35 of the
March 2008 issue of QST.

If you mean John Logie Baird, unfortunately he barked up the wrong (mechanical) tree for too long. But when he got together with Farnsworth things really started to roll.

And yet people still think TV was first demonstrated to the public at the New York World's Fair in 1939.

Whatever happened to World's Fairs, anyway?

I'll keep an eye out, but my point was the difference in focus.
The RSGB Handbook was more narrowly focused. I think it
eventually influenced the ARRL handbook, too.

Note too that the RSGB handbook wasn't a new edition every year, or
even every 2-3 years.

One thing that I think is missing from the ARRL library is a successor
to "Understanding Amateur Radio". "UAR" was a
great book that filled the gap between the basic intro books and the
full Handbook.

I would not be surprised if imported *parts* were taxed/tariffed/
dutied much less than imported finished
products.

In the back of the RSGB book were ads for outfits that would
sell you complete punched and drilled chassis, panels, brackets, etc.
for various well-known projects like the G2DAF receivers, or would
make up such things to your drawings. Also the Electronique coils,
Jackson Brothers drives and capacitors, etc.

> > Pete Millett's site. All kinds of stuff. There's also Frank's Tube

>

> I'll check that one out.

"Frank's" is actually a collection of sites all over the world. Not only do they have data for tubes you never even heard of, there are often multiple data sheets from different manufacturers. So you can compare the GL-833A from GE with the RCA 833A, for example.

YES! I remember now!

There was a smattering of amps with lots of tubes in parallel, aiming to achieve 50 ohm output impedance.

>• It used six 12JB6's at 500w

Less than $200 each, too. Adjusted for inflation, they are cheaper
than in the early 1960s when the 3-400Z first appeared.

> It is a sad state of affairs when it won't all fit in two rooms.

Not at all, IMHO!

> live where you like.

Sort of. Depends on the family situation, both spouse and kids. Also
one's health and ties to the community.

And most of all finances. With people living longer, having kids later
and the greater dependence on 401K/IRA funding rather than
company pensions and Social Security, retiring at 60, 62 or even 65
isn't nearly so doable as it was in times past.

IMHO the thing to do is to find a good RE attorney and agent, and
explain to them *exactly* what you will and will not accept. If they
don't "get it" right away, find somebody else.

Realtor.com is a wealth of info, too.

> > The best. Plus to the south are the drumlins and
> > the lakes. Winters
> > are tough but the folks there are used to them.

> I think you mean that they've learned to put up with them.

Not just that; the folks really are used to them.

> Most but "stay putters" have the option. • You needn't
> sell the XYL on an
> antenna farm. • Practice saying things like, "plenty of room for a
> garden" and "park-like setting".

Depends on the XYL. Some will not be interested in the garden or
the park-like setting. Others may not want to move away from their
connections to the community, or the kids. Or their career.

Of course if the kids move....

> > The first table I built, way back in the early 1970s,

> so many pallets
> that they are constantly running ads in the local paper
> for "free wooden
> pallets".

The key is the planer. I'd take a pallet apart, carefully checking
that all the nails and staples were out, and then run it through
the planer. Took several passes but the result was square, straight
finished stock. The pieces weren't long but they were long enough,
and I knew how to do splices.

I should get that old table out of storage and put it back to work...

Hi Howard,

Many laptop AC power supplies produce about 16VDC. For Field Day use, I picked up a used laptop of this type for about $380. A coworker (who's a whiz with switching regulators) designed a boost switching regulator that will handle up to about 4.5A load: http://www.geocities.com/bswadener/temp/Laptop_Power_Supply.pdf It'll maintain the output with as little as 11VDC input. As checked with a spectrum analyzer, it produces no noticeable noise.

Funny you should mention it! I've got most of the work done on a memoir
of the travels as they relate to amateur radio with just enough of the
non-radio events thrown in for flavor.

> You could put it on the web, too.....

Naw, I plan to finance my next rig with the proceeds. There'll be DVD's
as well. I'm still in the process of importing the videotaped material,
editing and glitzing it up.

I think that's probably due to the relatively small number of radio
amateurs in the British Isles. As I recall, the RSGB handbook was
nearly thirty dollars in the 70's.

> One thing that I think is missing from the ARRL library is a successor
> to "Understanding Amateur Radio". "UAR" was a

I agree. It was full of information set forth in an easy to follow style.

You're right. Finland taxed imported transceivers and amplifiers at
100% duty--even into the 80's.

As far as I know, Jackson Bros. is still in the business of making
vernier reduction drives--top notch stuff.

Odd that you mentioned those two. The only 833A I've got sitting around
is an Amperex.

I'm used to it. I once repaired a Heathkit Warrior amp for WA8JOC with
tandem copier transformers which I got for free.

Yep, relatively low plate voltage and high current jobs. One fellow did
a homebrew amp design which appeared in CQ in the 60's, which used
sixteen horizontal output tubes. Now if a guy wants some oomph for
cheaper, 811A's are a pretty good bargain as are 572B's. With four
811A's making 800 or so watts output, that's an inexpensive way to get
9db more than the typical 100w rig and it is down only about 2.5db from
the legal limit.

That's what I mean. Price 3CX800's, 8877's or 3CX1200's and you'll get
an idea of what a bargain the 3-500's are.

>> It is a sad state of affairs when it won't all fit in two rooms.

Pass it along to the kids now: There is an applied implication that
that they travel to visit the parents.

> And most of all finances. With people living longer, having kids later
> and the greater dependence on 401K/IRA funding rather than
> company pensions and Social Security, retiring at 60, 62 or even 65
> isn't nearly so doable as it was in times past.

Right now probably isn't a good time to hang it up so early. Then
again, many people seem to believe that they're going to need the same
amount of money as they now earn in their retirement. The house is apt
to be paid off, they do less driving. They don't have the kids to
support. Many of them don't need as large a house.

>> I've been going through realtors listings for the southern part of

What I've done in the past is to write it up in the offer, "subject to
there being no restrictions on the installation of an amateur radio
tower/s."

After a couple of false starts with a Cincinnati realtor back in the
70's, I got the agent working with us up to speed on what we wanted in
addition to style, size of yard, number of bed and bathrooms: no antenna
restrictions and located on high ground. I had trouble with a southern
West Virginia realtor before we bought this place. I'd specified "high
altitude. She showed me a couple of places with a great view of a hill
perhaps 500 feet higher than the house. I might have had to become an
Asia specialist.

> Realtor.com is a wealth of info, too.

...and homes.com and a number of other sites I'm presently browsing.

I'm thankful that my XYL and I agree that neither of us wants to be
hemmed in by neighbors. She likes vegetable and flower gardening.
I like multiple towers. I'm thinking 3 or 5 or 8 acres. *grin*

Amateur Radio Newsline(tm) Report 1597 - March 21, 2008

Amateur Radio Newsline report number 1597 with a release date of Friday, March 21st, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The long awaited Clipperton DXpedition goes Q-R-T after a successful run, California hams are exempt from a new hands

free cellphone law and ham radio says goodbye to AMSAT member 2001 with the

passing of writer and visionary Arthur C. Clarke. Find out the details on

Amateur Radio Newsline(tm) report number 1597 coming your way right now.

BREAKING DX NEWS: - CLIPPERTON A SUCCESS AND NOW QRT

The long awaited Clipperton DXpedition now QRT and everyone involved is calling it a big success. Amateur Radio Newsline's Burt Hicks, WB6MQV, reports.

--

Operations from Clipperton Island ended early on Saturday March 15th. During the tile the team was on this rare D-X-C-C entity, the members had to endure major tropical storms and extreme heat. This took its toll on both the operators and equipment.

Even so, the last report on the operations Web page shows a total of 59,875

QSO's were completed. Of these 28,402 were on CW, 28,736 on SSB and 2,737

made on RTTY.

Heres the post DXpedition information you need to know. First is that you

QSL this operation to N7CQQ, either via the bureau or direct to John Kennon, P.O. Box 31553, Laughlin, Nevada 89028, USA.

Also, for those who use electronic contact verification the logs will be uploaded to the ARRL's Logbook to the World as soon as they have been verified.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

More information is on-line at www.clipperton2008.org (Clipperton Web Page)

**

BREAKING DX NEWS: GLORIOSO ISLANDS TO ACTIVATE IN MAY

One of the most sought after D-X entities may soon be on the air. This with word that a French group that has been trying to get a permit to activate Glorioso Island for several months has finally received the necessary landing permit.

If all goes well, the five operators hope to bring Glorioso to the ham radio airwaves in early May. Dates being talked about are May 5th to the 9th, but at airtime nothing is cast in concrete. They are currently looking

for sponsors, and if you would like to help please contact F5OGL.

Presently, Glorioso is ranked 4th in "DX Magazine's 2007 Most Wanted Countries World-Wide" in the mixed modes. Once there the team plans to have 3 or 4 stations on the air to help fill the need for QSO with this rather rare location.

The latest updates can be found at the operations website and we will have

more DX news for you later on in this weeks Amateur Radio Newsline report.

(do not read: at http://glorieuses2005.free.fr (OPDX, others)

**

RADIO LAW: HAMS NOT AFFECTED BY NEW CALIFORNIA CELLPHONE LAW

Amateur Radio has been exempt from California state's new "Hands Free" law. Beginning July 1st California will have new laws on the books to deal

with the use of wireless telephones while driving. Some personal radio operators have been asking if the new statute affects them.

According to the California Department of Motor Vehicles, the use of dedicated two-way radios such Citizen Band transceivers, walkie-talkies and

the like are not affected by the new ordinance. This, as long as the person behind the wheel is age 18 or older.

More is on-line at the California D-M-V website: http://www.dmv.ca.gov/cellularphonelaws/dl208_03cell_phone.pdf (DMV, ARNewsline(tm))

**

CHANGING OF THE GUARD: COMMUNICATIONS VISIONARY ARTHUR C. CLARKE - S.K AT

AGE 90

The changing of the guard continues. This with word that British science fiction writer, communications futurist and friend of Amateur Radio, Arthur

C Clarke, has died in Sri Lanka at the age of 90.

According to news reports, Clarke passed away the morning of March 18, 2008, after suffering from breathing problems. While not a radio amateur,

Arthur C. Clarke had some strong albeit unofficial ties to the world-wide ham radio space community. For years he held the honorary AMSAT membership

number 2001.

As an author and visionary, Clarke's most famous prediction was his proposal of geostationary satellites for communications published in the Wireless World magazine in 1945. While this proposal was not taken seriously at the time, his orbital dream became a reality about two decades

later with the launch in 1965 the first commercial geostationary communication satellite Intelsat One also known as Early Bird. In this audio clip from a 1992 interview with the late Roy Neal, K6DUE, Clarke told

hams listening to a teleconference radio net how the idea came about:

--

Clarke: "At the time I was working on a very complex RADAR. It was the first Ground Approach Control flight management system which has about a thousand valves or what you call tubes. At least one would blow out every

day , so I couldn't imagine that sort of equipment operating without mechanics on the spot to change them and give it service. So I assumed that these relay stations would be manned space stations, like the Freedom

Space Station but at a lower altitude."

"What I didn't envision was the incredible revolution in solid state electronics: First the transistor and later the micro-chip. And I have sometimes said though not very seriously that the invention of the transistor was a major catastrophe for astronautics because if we hadn't invented the transistor we would have had to build manned space stations and we would have been half way to Mars by now (giggle)."

--

For his effort, the geostationary satellite orbit known as the Clarke Belt

was named in his honor. And while he had moved away from the United Kingdom years ago, in 1988 was knighted by England's Queen Elizabeth.

As a writer Clarke was the author, or co-author, of dozens of fiction and non-fiction books. He will likely be best remembered for his novel 2001: A

Space Odyssey. This book was later turned into a landmark big screen motion picture by Clarke and director Stanley Kubrick. His other well known works include the sequel 2010 that also became a motion picture and the books Childhood's End and Rendezvous with Rama. In all, Arthur C. Clarke has penned some 33 novels and another 29 non-fiction books and stories from the time he began writing them in 1950. His latest titled "Firstborn" was published in 2007.

Once called the first dweller in the electronic cottage, Arthur C. Clarke's

vision of space travel and computing captured the imagination of readers worldwide long before any of it came to pass. He lived to see much of what

he predicted become reality during his lifetime.

Arthur C. Clarke, visionary, writer and longtime friend of radio amateurs word wide, dead at age 90. (ARNewsline(tm), published reports)

BREAKING NEWS: REMAINS OF MISSING INDIANA HAM BELIEVED FOUND

Some breaking news. Plainfield, Indiana, police said they may have found the body of a ham radio operator missing for more than two years. This as

authorities discover the vehicle belonging to Harold Hensley, AB9JD, with a

person inside of it in a retention pond close to his home.

According to news reports Hensley was last seen leaving his residence in January of 2006. At that time his wife told authorities that her husband was on his normal routine and he was supposed to be at work at 7 a.m.. His

employer called at 7:30 and said he had not shown up. He has not been seen

since.

The biggest break in the case came just five blocks from the Hensley's home. Police said a tip early in the investigation brought them to a BP Gas Station. They said its where someone saw Hensley the day he went missing. Finally on Monday afternoon March 17th investigators found Hensley's jeep and what they believe to be his human remains in the pond only about 5 blocks from his home. Detectives are waiting for autopsy results to confirm his identity and the exact cause of death. (Published news reports)

ENFORCEMENT: $13000 ASSESSED FOR TOWER VIOLATIONS

The FCC Enforcement Bureau has finalized a fine of $15,200 against Pembrook

Pines Elmira Ltd., which owns AM stations WEHH and WELM in the state of New

York. The commission said the owner had failed to comply with antenna structure lighting requirements, notify the FAA of an antenna structure light outage or operate its stations consistent with the modes and power authorized in their licenses.

The Buffalo Field Office had originally issued a Notice of Apparent Liability of $19,000 early last year. The company didn't dispute the findings but asked for a reduction because the FCC previously had not treated failure to notify the FAA as a separate violation and because the station had a history of compliance.

The commission rejected the first argument, saying that it believe that it

is appropriate, and consistent with precedent, to assess an additional $3,000 forfeiture where there is evidence that the tower owner knew of a light outage prior to the inspection by FCC agents and failed to notify the

FAA. But it accepted the second ongoing full compliance issue and cut the

fine by $3,800. (FCC)

REPEATER NEWS: NEW UK 10 GHZ SYSTEM COMES ON THE AIR

What is believed to be the first 10 GHz F-M voice repeater in the United Kingdom came on the air on March 14th, GB3TC t is co-sited with GB3CS at Berryhill Farm in Lanarkshire. The new system operate on a channel pair of

10371.1 MHz in and 10471.1 MHz out and requires a 103.5 Hz sub audible or 1750 Hz burst access tone.

Beacons in FM with call and locator every 60s when not repeating. The output of the repeater is in the Amateur Satellite segment as its planners

believe it could provide a useful signal source for setting-up weak signal

equipment.

The project is being independently operated and funded by local radio amateurs with support from the Central Scotland FM Group and its technical

team. Together with the GB3CSB beacon project for the 23, 13 and 9cm bands

the new repeater is designed to stimulate activity on these higher frequency bands.

More information is on-line at http://www.csfmg.com/GB3TC.htm (Southgate)

**

D-STAR NEWS: D-STAR TO COME TO LONDON

Still in the U-K, the city often called the gateway to Europe -- London, England, will soon have its first ever D-Star repeater. The Radio Society

of Great Britain's Emerging Technology Co-ordination Committee website says

that the GB3OK repeater at Bromley in Kent has applied to become GB7OK and convert to D-Star technology. This is the latest application and the first from the London area for this amateur digital mode which has been gathering considerable interest since last year. (Southgate)

**

HAM RADIO IN THE SPOTLIGHT: THAT NEW MOUNTAIN DEW COMMERCIAL

Ham radio is portrayed in a strange but fun way in a new commercial for the soft drink Diet Mountain Dew. Actually the spot is a kind of battle of the sexes with the claim being that lightning hits men more often then it does women. In it, you see a bunch of Y-L's involved variety of activities that experts say should not be attempted in a thunder storm. This includes fencing and operating a ham radio station Field Day style as lightning flashes and thunder roars.

We won't spoil the outcome of this adventure for you by describing what happens next. We do however wonder if the producers went to eBay to get their props because they sure have some magnificent vintage tube type gear for their Y-L ham to use. You can see the commercial on-line of YouTube at http://www.youtube.com/watch?v=MieEfkwICB8 (ARNewsline(tm))

**

HAMVENTION 2008: ROAD CONSTRUCTION NEAR THE HARA ARENA

If you are planning to attend the 2008 Dayton Hamvention, you will need to give yourself a little more driving time than in years past. This due to several road and street construction projects that will be ongoing in the area.

The first problem is construction is at the north end of the downtown Dayton area on Interstate 75 from about Mile Marker 53 to 56. Rob Lunsford KB8UEY, who is the Hamvention's Talk-In Committee Chairman says that the Ohio Department of Transportation has started a multi-year multi-phase reconstruction of I-75 in which there are lane restrictions, bridge replacements, and various other adjacent projects.

The other traffic pinch involves one of the main surface streets used by attendees of Hamvention. Needmore Road it is almost a straight shot from exit 58 on I-75 to Hara Arena. Unfortunately for Hamvention goers a rebuild project is set to begin on this roadway and it will be down to one lane each way for no less than 100 working days. If you look at a calendar, that includes Hamvention weekend.

Lunsford says that these repairs are long overdue and there are work-arounds for those driving to both the Hara Arena and the event parking

at the nearby Salem Mall. We suggest that you go to www dot hamvention dot

org in coming days to find the alternate route that best serves you. (Hamvention(tm))

WORLDBEAT - NEW ZEALAND: NEW DOT POST DOMAIN ON ITS WAY

A new domain for e-mail has been proposed. Jim Meachen, ZL2BHF, reports from down under:

--

A new "dot post" Internet domain in the works that hopes to set apart the

electronic services increasingly offered by postal agencies around the world. The Internet's key oversight agency, the Internet Corporation for Assigned Names and Numbers, is trying to work out terms for the suffix with

the U.N. Universal Postal Union. Backers say restricting the "dot post" name to postal agencies or groups that provide postal services would instill trust in Web sites using such names. By contrast, popular suffixes

such as ".com" and ".org" are assigned on a first-come, first-served basis.

Im Jim Meachen, ZL2BHF.

--

Approval of the "dot post" domain could come soon with implementation taking place over the next several months. (Internet Services)

**

WORLDBEAT - SOUTH AFRICA: NEW 2 METER BEACON SYSTEM ON THE AIR

South Africa now has a 2 meter beacon project initiated by John Sygo, ZS6JON, now has four beacons on the air, with a number of others set to go

live very soon. All operate in the spectrum between 144.4 to 144.5 MHz with systems on the air in the cities of Cape Town, Bloemfontein and Durban. The keyers were donated by ZS6EF. The output of the beacons varies

between 10 and 20 watts. (Southgate)

**

CONTEST CORNER: THE IRISH 2 METER CONTEST

And if you think that radio sports is just for the High Frequency bands, better not tell that to the hams in Erin's isle. That's because the Irish

Radio Transmitters Society's 2 Meter Counties Contest will take place on Monday March the 24th from 2 to 4 p.m. local time.

The basic idea is for clubs and individuals to take part by activating some

of Irelands rarer counties. Full rules are available on the IRTS web site. Its in cyberspace at www.irts.ie. (IRTS)

**

DX

In DX, word that DL1BDF, plans to become active from Egypt as SU0ARA on all bands through March 19th. He also hopes to get a special permission for 80 meters because this band is usually not permitted for amateur radio. QSLs via SU1KM.

K4QD and AF4Z will be active portable HH4 from the Northwest Haiti Christian Mission between March 24th and April 4th. They will operate 80 through 10 meters on CW, SSB and RTTY, but only as time permits. QSL via their home callsigns preferably using the ARRL's Logbook to the World QSO confirmation service.

SP2JMB, will be active portable 3B9 from Rodrigues Island and then from Mauritius Island portable 3B8. This, from April 1st through the 8th. His

activity will be mainly on C-W with QSL's going to his call book address.

A team of German operators will be active from Nouakchott in Mauritania through March 30th. No callsigns were provided but they do plan to operate

the CQ World SSB contest on March 29th and 30th as a multi entry. QSL via

DH7WW, direct or by the DARC bureau.

Lastly, listen out for Senegal as a Swedish team of operators become active

as 6V7I between April 6-12th. The group plans to have two stations on 160 through 10 meters operating CW and SSB, with monoband yagis and verticals.

QSL via SM7DXQ.

(From various DX news sources)

THAT FINAL ITEM: ACCOLADES TO TONY

And finally this week, word that an Australian ham has been honored by NASA. This for his dedication to the educational side of manned ham radio

operations from pace. WIA newsman Jim Linton, VK3PC, tells us about the work of Tony Hutchison VK5ZAI:

--

Known around the world for his involvement in facilitating amateur radio communications with orbiting space stations is Tony Hutchison VK5ZAI, who has just received a well deserved achievement award.

Tony is the Australian coordinator of the Amateur Radio on the International Space Station (ARISS) project is now the proud but humble recipient of a Group Achievement Award from NASA's Lyndon B. Johnson Space

Centre in Houston Texas.

The citation on the award certificate is ï¿½For providing sustained outstanding engineering support which has resulted in a record number of successful ISS amateur radio contacts', and signed by the Johnson Space Centre Director, Michael Coats.

Tony VK5ZAI has for more than 15 years given many schools and groups the opportunity to talk with space station crew. A notable occasion was the Australian Scout Jamboree in January 2007 as part of the world scouting movement's centenary.

His involvement began in 1993 by assisted South Australia's Loxton High School students talk with Cosmonaut Alex Serabrov on the MIR space station.

In 1998 Tony handled most of the communications between Australian-born Astronaut Andy Thomas VK5MIR and his family during his flight on MIR.

Soon after he was invited to be one of nine-approved ARISS telebridge stations and began handling most of the private family contacts for the first three crews on the International Space Station, along with school contacts.

Tony has been involved in linking with school in many countries, and the development of IRLP and Echolink for ARISS contacts, plus the design of interface units used for ARISS telebridge contacts in Australia and Europe.

I'm Jim Linton VK3PC reporting for the Amateur Radio Newsline.

--

Tony's enthusiasm and dedication, motivated by a personal desire to put something back into amateur radio, makes him well deserving of NASA accolade. (WIA News)

222. Cost of internal keyer

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-21 16:41:16 UTC
From: Klystron <xxx@yyy.zzz>
Message-ID: <xxx-3DEE4B.12333821032008@news.verizon.net>
Source record: 3193

Most base-type radios, especially HF radios, have keyer circuitry built in. On those radios where it has been optional (Icom 970, e.g.), it has been a fairly expensive option. Can anyone estimate the amount that it adds to the price of an HF radio? What would we save if it were left off? Considering the ever shrinking role of Morse, does it really make sense to insist that all HF radios include it? It almost seems as if the various manufacturers are afraid to go first in making it an option. It seems like it is more of an ideological issue than a practical one.

I'm not so sure. It's probably more cost effective in the long run to include it rather than not, if you make it an addon option then it complicates matters. Look at the myriad options you get when buying a new car - do you want aircon, electric windows, spotlights, etc. etc.

I remember 10 years or so ago when Icom here in the UK sold off a load of unsold commercial UHF transceivers onto the amateur market (the IC-U101 if anyone remembers it, still have one somewhere, it made a great packet radio rig..!) - as a commercial radio, it came with built in CTCSS (PL) tone encode/decode but for some reason best known to themselves Icom physically removed the tone boards from the radios before selling them to amateurs.

I suppose they thought they could make extra money selling the tone boards as "optional extras" (or am I being an old cynic..?!)

First, the IC-970 wasn't an HF rig, so far as I remember. Also, Icom accessories have always been terribly over-priced (priced a CT-17 lately?), so what they charged for a keyer module is no reflection on its actual cost. Further, designing and packaging a keyer as an optional plug-in module, and designing a radio so that it can accept such a plug-in, probably increases the cost of both more the cost of a standard built-in keyer.

These days, the cost of the few additional parts needed to implement a keyer (or the few additional lines of code in the firmware) is lost in the noise of a retail price of $2000 for a full-featured HF rig. The cost of the key jack probably equals the cost of the keyer.

And, I question your assertion of the "shrinking role of Morse" anyway; I think you're the one with an ideological issue.

My guess is that the actual bill-of-materials needed to include a
basic keyer into the design of a new transceiver design is no more
than $5, and quite possibly less.

Assuming that the transceiver has a jack for a straight key, you can
add a basic iambic keyer with nothing more than a second jack, a very
small microcontroller (e.g. a PIC costing a dollar at most) and some
wiring.

In transceivers that are already microprocessor-controlled (which is
most of the new ones, I think) the iambic-keyer and memory functions
can be rolled into the code of the existing micro... so all you really
need to add is a jack, wiring, and the additional programming logic.

So, the incremental cost of adding one should be quite small.

Keyers with a much larger memory, beaconing functions, etc. might
require more hardware... but these days you can pack a *lot* of code
and memory into a tiny little 6- or 8-pin surface-mount microcontroller.

That's because hardware is involved when it's made an option. The
basic logic
of a keyer, even the fancy iambic ones, is pretty simple.

> Can anyone estimate the amount
> that it adds to the price of an HF radio?
> What would we save if it were
> left off?

In most rigs with built-in keyers, the keyer circuitry is nothing more
than the paddle inputs. The actual implementation is in software,
and the savings (if any) would be small, if any. Couple of dollars at
most.

> Considering the ever shrinking role of Morse, does it really
> make sense to insist that all HF radios include it?

I disagree that the role of Morse is "ever shrinking" on the amateur
HF bands.
Judging by the use of the mode in contests, DXpeditions, QRP, homebrew
projects and the sale of paddles and Morse-only HF rigs, the mode's
role
in amateur radio hasn't really changed.

> It almost seems as
> if the various manufacturers are afraid to go first in making it an
> option.

Why should they make it an option, given that it costs almost
nothing to include? Leaving it out would probably hurt sales to the
point
of negative return.

> It seems like it is more of an ideological issue than a
> practical one.

Not at all.

The "ideology" of most current HF amateur rig designs is to include as
many features as
possible, particularly if those features can be implemented in
software. So we have rigs

with lots of memories, multiple VFOs, lots of selectivity/AGC/NB
choices, lots of computer-control features, real-time clocks, data
mode encoding and decoding, and much more - all in software, not
hardware. They add very little to the
cost of the rig, and nothing to its basic-radio performance numbers,
but hams seem to like them.

>From the standpoint of the manufacturers, it would not be practical to
remove a feature most customers have come to expect, whether they use
it much or not.

This is truly excellent.

Perhaps a sample could be on the web, such as how Amazon lets you see
a small part of a book.

> > If you mean John Logie Baird, unfortunately he barked up the > > wrong

It was theoretically correct, but impractical for "high definition" TV
in real time.

But the market wasn't just the UK. I suspect the Commonwealth
countries, both current and former, would be a market. Aussies,
Zedders, etc.

> As I recall, the RSGB handbook
> was nearly thirty dollars in the 70's.

The one I have is earlier, and I think it worked out to about $13-15
or so - back when an ARRL Handbook was $4. Plus you probably
had to pay postage, duty, etc.

Having bought "real" engineering books, I can say that both the ARRL
and RSGB Handbooks were and are true bargains.

The ARRL Handbook back then was mostly the work of W1DX,
aided by the staff. The book evolved over time - the whole book
was not rewritten every year.

The RSGB Handbook had many authors, and underwent serious
expansion and revision between editions. Since there was not
a set schedule for when the next edition would come out, the
changes were much greater.

Friend of mine is trying to collect all the post-WW2 Handbooks,
and has most of them. He has all the post-WW1 QSTs, in part because an
OT gave him a lifetime collection, knowing he would appreciate and
care for them.

The Southgate Library keeps expanding, too. What you see in the shack
picture is but a small part of it. Then there's the stuff I have
in electronic format...

Both theory and practice, code and voice, HF and VHF.
Half the price of a Handbook.

Yes, but not as top-notch as BC-221, LM or ARC-5 drive/capacitor
combinations.

> Odd that you mentioned those two. • The only 833A I've
> got sitting around is an Amperex.

I used to have an RCA 833A, but it got sold. I have some
experience with them, but not as much as with the more-common
"ham" amplifier tubes.

> a homebrew amp design which appeared in CQ in the 60's,
> which used
> sixteen horizontal output tubes. •

The most I ever saw was a picture in QST of a 75 meter monoband amp
with something like thirty-six 1625s in parallel. Output impedance was

75 ohms; fed the antenna through a lowpass filter. Of course the
output C was so enormous it couldn't go any higher, and IIRC there was
quite a pile of bias pots.

> Now if a guy wants some
> oomph for
> cheaper, 811A's are a pretty good bargain as are 572B's.

> 9db more than the typical 100w rig and it is down only about
> 2.5db from
> the legal limit.

Yep. But with four 811As you often need to neutralize even in GG, and
depending on where you get your bottles a pair of 572Bs may be the
better deal.

The solid-state option has been around for decades, but the high cost
stops a lot of hams.

In April 1976, a legal-limit solid-state all-band HF linear amp was
the cover article in QST. If someone had told me then that in 2008
there would be more models of tube-type linear amps being made for
hams than in 1976, and that hams would be buying and using them, I'd
have not believed it.

(3-500Z tubes)

> > Less than $200 each, too. Adjusted for inflation,

> you'll get
> an idea of what a bargain the 3-500's are.

Those ceramic-metal tubes were never inexpensive in the first
place.

Unlike almost all commercial/military applications, in ham radio,
when an expensive final tube fails, it's up to the owner/operator
to pay for the replacement.

> Well, there's likely a move in my future and something's going to > have t
o go.

(sigh)

> that they travel to visit the parents.

>
That's good advice in theory but in practice it often works out to
be more complicated. Traveling with little kids is both expensive
and difficult, and in families with two careers just getting everyone
off work and out of school at the same time can be a challenge.
(Vacation and sick days are often used up when the kids are
sick, and there's never spare cash laying around. So it's often
more practical for Grandma/Grandpa to travel.

Still, all that means is you draw distance circles around where the
kids are. Doesn't mean you have to live down the street.

> > And most of all finances. With people living longer, having kids > > lat
er

> They don't have the kids to
> support. Many of them don't need as large a house.

Agreed, and there are tax advantages, such as getting double
exemptions after 65, the capital-gains exclusion for selling the
big house, the lack of tax on SS after age 70, etc.

OTOH things like health care costs, rising energy prices, etc.,
work the other way.

bwaahaahaa

But a good example of the problem, and the need to get the
RE attorney and realtor to understand *exactly* what you
will accept.

> > Realtor.com is a wealth of info, too.
>
> ...and homes.com and a number of other sites I'm presently
> browsing.

Good.

You have the most important resource, too: Flexibility. You don't have
to move this month, or this summer, or land in a specific school
district or some such.
>
> I'm thankful that my XYL and I agree that neither of us wants to be
> hemmed in by neighbors. • She likes vegetable and flower
> gardening.
> I like multiple towers.

Works for me!

> • I'm thinking 3 or 5 or 8 acres. *grin*
>
Think big, think flexible. Could you subdivide some acres for other
homes? Lease for farming?

One thing that was/is popular in WNY is to have a woodlot. Usually a
piece of land that is heavily wooded, had no utilities and won't pass
the perc test.

The owner cuts a couple of cords of wood every year, sells some, uses
the rest for heat. The profit on the wood sold pays the RE taxes. Only
the crowded and not-so-good trees are taken; the really good ones are
left to grow and given room.

Of course you have to love to cut, split and stack wood, but a lot of
us do.

"Wood warms you twice - once when you cut it, again when you burn it"

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

It still seems like an awfully slow data rate. I have seen people throw 14400 baud modems in the garbage because they considered them to be so slow as to be worthless. A data rate of 42 bps is about 3 orders of magnitude slower than that. It just seems inconsistent with the way that so many hams have fought tooth and nail to hold onto Morse and to hinder the move toward digital modes.

Certainly makes more sense than including AM, FM and RTTY. A lot less money involved, too, well maybe RTTY is about the same as a keyer. But AM and FM require additional filters, additional circuitry, etc., and their following is probably a lot smaller than CW. (obviously, on HF. VHF FM is clearly heavy hitter but not so much on HF, especially at this time of the cycle.)

The negative impact on sales from a comment in a review like, "Great rig, but missing an internal keyer" would offset the tiny cost of including the keyer.

The joy of Morse is not the speed at which data is transferred but the
means of transferring. A good Morseist (mot me....) doesn't need a
computer or software to decode it.

And I know several Morseists who not only use "high speed data modes'
in addition to using Morse, but hold advanced degrees in development
of those modes.

Morse is for fun.

Compared to what? And for what application, in what bandwidth?

If you have a pile of data to send, or a picture, etc., 41.66 bps is
quite slow.

But for a real-time conversation, 41.66 bps isn't all that slow. The
average person doesn't talk or type at a sustained speed much faster
than 100 wpm. 50 wpm isn't that much slower.

> I have seen people
> throw 14400 baud modems in the garbage because they
> considered them to

11 years ago, when I first went online, it was with a 56k modem. I
gave up on dialup modems several years ago and went broadband. I don't
think anybody who has a choice is still using dialup.

But that's because the options exist, with no significant downsides. A
14400 modem uses the same phone line as a 56K modem. DSL can be run on
the same phone line and not tie it up for telephone calls.

Operating on the limited bandwidth amd high variability of the HF
amateur bands is a completely different thing.

A lot of hams like Morse Code and use it on the air. It has a lot
of advantages. Why should they give it up?

And how has "the move toward digital modes" been hindered by hams?

Many types of communications vary over many orders of magnitude of
information rate, yet are considered useful and up-to-date.

For example, the Casio WaveCeptor on my wrist:

http://www.eham.net/reviews/detail/2497

receives a ~ 1 Baud Pulse Position Modulated (PPM) signal from radio
station WWVB in Fort Collins, Colorado, which transmits on 60 kHz. It
takes about a minute to send the complete time code to synchronize my
watch. Slow? Yes. Useful? Yes, very much so, especially when
considering the coverage and reliability that can be obtained from such
a low-bandwidth, groundwave-propagated, Very Low Frequency (VLF) signal.
The watch only needs to receive the time code at most once per day,
which it does so automatically in the early hours of the morning sitting
on my desk or dresser. A faster data rate would require something other
than a VLF signal, and would not improve much on the quality or
usability of the communications. It would definitely increase the
price. Witness the much greater success in the marketplace of
WWVB-based watches versus more advanced, higher bandwidth, but much more
expensive, "Smart Personal Object Technology" (SPOT) watches:

http://www.spotstop.com

One of the most current and widely used communications technologies
among young people is cellular telephone text messaging:

http://en.wikipedia.org/wiki/Text_messaging

(sometimes also called "Short Messaging System" or SMS)

According to this recent demonstration on the Tonight Show with Jay Leno:

http://www.youtube.com/watch?v=AhsSgcsTMd4

the realizable data rates are comparable in order of magnitude to that of fast Morse code that can be sent and received by human operators. Just try telling a teenager with an SMS-capable cellular telephone that it should be thrown in the trash because it isn't fast enough, or isn't of sufficiently novel technology, and see his or her reaction.

To give you an amateur radio example, the Automated Position Reporting System (APRS):

http://www.aprs.org

uses 1200 Baud AFSK packet. Faster, but still an order of magnitude slower than technologies you imply should be thrown out. Since APRS reports important, but compact, telemetry at periodic intervals, the technology meets the requirements of many users utilizing VHF radios and Terminal Node Controllers (TNC's). Again, substituting much higher data rates would really not improve the technology or better meet the requirements of the users which it serves.

To even give you a Morse code example, consider the simplicity and effectiveness of the NCDXF beacons running on the HF bands:

http://www.ncdxf.org/beacons.html

A relatively low data rate On-Off Keyed (OOK) Morse Code signal is able to quickly convey to the listener the quality of the communications link, and required link budget, to various points around the globe. All that is needed to be transmitted is a station identification, and the same symbol (in this case the letter "V") sent at 10 dB power steps from 100 Watts to 0.1 Watt. Complex modulation/demodulation equipment to achieve "orders of magnitude" faster data rates would not only not fit on the HF bands, they would not seem to offer much improvement in the quality of the service.

I suppose one could implement a beacon network using something like PSK31:

http://www.psk31.com/

which might even be able to demonstrate realizable communications link budgets below 0.1 Watt. But even that advanced digital mode would only have data rates comparable to Morse code. Though the NCDXF beacon network is a Morse code service, note that Morse code knowledge is really not necessary to utilize it effectively. A synchronized time base and a chart of which station transmits at which time would enable very fast determination of the link budget to the beacon locations. If you can't remember what a "V" sounds like in Morse Code (". . . _" like the intro to Beethoven's Fifth Symphony), I suppose you could put that on the chart as well. After all, the use of similar charts are how pilots usually decode the Morse code identifications of aeronautical

beacons.

There are even a number of excellent software packages linked from the NCDXF site above that could automatically monitor the signals, decode the Morse, and record the quality of the communications paths over time. One such package is Faros:

http://www.dxatlas.com/Faros/

one of many advanced signal processing software packages for amateur radio that exploits the ubiquitousness of of inexpensive personal computers with sound cards in most home ham "shacks."

Focusing simply on information rate disregards other aspects of the communications and the channel over which it is transmitted. These important aspects include the bandwidth and propagation characteristics of the available channel, the complexity of the required transmitting and receiving equipment, the amount of data that needs to be transmitted, and how quickly and often it needs to be conveyed.

Single-attribute measuring contests may be fun, even ego-boosting to some, but are really not very useful or impressive to those who actually design and use practical communications systems.

>It just seems inconsistent with the way
>that so many hams have fought tooth and nail to hold onto Morse and to
>hinder the move toward digital modes.

I'm not sure that I understand your line of reasoning here. You are implying cause-and-effect. In other words, use and advocacy of Morse code somehow directly contributed to the obstruction of other technologies. Can you give direct evidence of specific examples? If you are implying that licensing requirements obstructed the development of advanced digital modes, that really doesn't appear to be the case. Witness the success of Tucson Amateur Packet Radio (TAPR):

http://www.tapr.org

and the Radio Amateur Satellite Corporation:

http://www.amsat.org

which have developed or championed many promising digital technologies, developed by amateurs with widely varying degrees of Morse code operating skills.

Furthermore, if the only technologies that you believe should be saved from being thrown away are those at 14.4 kBaud and up, those technologies are only practically realizable on amateur radio bands at high VHF and up. Such bands have been open to licensees without need of a Morse code test for going on 17 years now. Even before then, these bands were accessible to Technician-class amateurs since at least shortly after World War II, with a license that only required a minimal, 5 WPM (essentially individual character-recognition) Morse code test.

If you are saying that someone *else* should have developed these technologies (other than you, of course), and that since they haven't, then someone *must* be to blame, well, you can't really dictate how the world should turn out without taking an active role to help make it that way.

In your model, only a single axis of data is transmitted - the time
of day. That seems like a great deal of infrastructure and energy
consumption to transmit a single data quantity. The equivalent
infrastructure for weather transmission (marine and air) is even more
elaborate and expensive. Can you see that is an outrageously inefficient
way to distribute a small quantity of information?

My understanding is that they use SMS for fairly trivial
communications, like what they will have for lunch or where they will
meet at the mall. A rough equivalence might be SMS users objecting to
the use of the SMS system by people who are sitting at full-size
computers or by people who have connected keyboards to their phone. If
they were to complain that "typing" pidgin English (like "HOW R U?")
with your thumbs on a tiny telephone keypad was the one true way to use
SMS, then I think I could agree that there was an equivalence.
You might ask those kids why they also use conventional e-mail,
despite having SMS availability.

Again, it is for the exchange of a single axis of data - geographic
location. Please stop tying to pass off these single purpose, dedicated
systems as examples of general purpose communications.

> To even give you a Morse code example, consider the simplicity and
> effectiveness of the NCDXF beacons running on the HF bands:

My understanding is that Morse-based beacon identifications are read
by computerized devices and are not "copied" by the pilots. I doubt that
you could find very many current pilots who could copy any Morse at all.

There is nothing about that that is unique to Morse. Any type of RF
link would be usable in that way.

Hams used to deride digital communications as "pulse" and tell tales about the way that it squandered bandwidth. They made it out to be something along the lines of spark-gap. Look for articles about "pulse" communications in old (1960's and 70's) issues of QST and Popular Electronics. Considering the lead time needed to develop a new mode, I think it is unreasonable not to go back at least that far. I believe that the anti-digital curmudgeons delayed the implementation of digital modes by a matter of decades. It is interesting to note that the most widely used digital modes (for 2-way radio, not for broadcast) were developed either in Japan (Icom/JARL DV) or under the auspices of a police organization that has no ties to radio, except as consumers (APCO 25).

> [...]
> Furthermore, if the only technologies that you believe should be saved

Can you point to something in my post that makes such a claim? The only technology that I have derided as being too slow as to have value is Morse code that is sent by hand (less than 100 baud). The Navy shut down its VLF network on the grounds that the data rate was inadequate. Perhaps it is time for the amateur community to take a similar step.

That last paragraph is incoherent. Could you rephrase it?

Actually, it's a very small infrastructure, and very efficient. I've
been there, btw.

The time standard info is already present at the WWVB transmitter
site, so that's no cost. All that's necessary is a system to encode
it, and the WWVB transmitter and antenna. While an impressive
installation by amateur radio standards, the WWVB transmitter is
not overly large for the wavelength.

But WWVB's 60 kHz signal serves large numbers of clocks of many types
all over North America - by radio. It keeps them all synchronized via
radio, without any user intervention.

What alternative technology would do the same job with less
infrastructure and energy consumption?

> The equivalent
> infrastructure for weather transmission (marine and air) is

Of course. But it's also very important from a safety standpoint.

> Can you see that is an outrageously inefficient
> way to distribute a small quantity of information?

What alternative technology would do the same job with greater
efficiency?

> > One of the most current and widely used

> > the realizable data rates are comparable in order of magnitude > > to th
at
> > of fast Morse code that can be sent and received by human
> > operators.

The facts are even more telling.

In that Leno clip, the text messager is the Guinness-book
world-record-holder. The Morse Code ops are a couple of
hams who were going less than 30 wpm - which is less than
40% of the world-record Morse Code speed.

The text messager was allowed to use common text-message
abbreviations, while the Morse Code ops just sent the straight
text with no abbreviations at all.

The Morse Code ops also produced a hard-copy in real time.

IMHO, what was most telling was that the audience was sure
the text messager would win. But a much older technology
proved to be faster.

> > Just try telling a teenager with an SMS-capable cellular
> > telephone that
> > it should be thrown in the trash because it isn't fast

> > of sufficiently novel technology, and see his or her reaction.

The answer will be that it's fast enough for what it's used for.

Isn't that the ultimate test of any technology - that it's good
enough for what it's used for?

> My understanding is that they use SMS for fairly trivial
> communications, like what they will have for lunch or
> where they will meet at the mall.

I can say for a fact that's not true. While a lot of text - and cell
phone - communications is trivial, much is not. For example,
something as simple as a meeting place or time can be
critical information.

> A rough equivalence might be SMS users objecting to

> computers or by people who have connected keyboards to their
> phone.

Actually the system can be used that way, in that a message generated
by a cell can be delivered as an email, and the
reverse.

The point is that speed isn't the only criterion.

No one is trying to do that. The point being made is that speed
is not the only criterion.

What is meant by "general purpose communications"? My computer
allows internet access, email and some other things, but I still have
POTS and a cell phone. TV and radio come to my house over the air.

> > I'm not sure that I understand your line of reasoning here.

> Hams used to deride digital communications as "pulse"

> and tell tales
> about the way that it squandered bandwidth.

I don't know any hams who used the term "pulse" to refer to
digital communications. Nor have I heard tales about squandered
bandwidth.

However, note that not all digital signals are designed with
bandwidth efficiency as the primary consideration. For
example, classic 850 Hz shift 45.45 baud RTTY uses almost
a kHz of band to transmit about the same info (actually
less) as PSK31 which uses maybe 50 Hz.

> They made it out to be
> something along the lines of spark-gap.

If you mean spark, I have not seen that comparison anywhere.
Could you provide a specific reference?

> Look for articles about "pulse"
> communications in old (1960's and 70's) issues of QST and
> Popular Electronics.

I have all the QSTs back to the mid-1920s, and have read all
of them. I do not recall any comparison of digital modes to
"pulse" in any of them. Could you provide a specific reference?

I do recall some QST articles back in the 1950s *advocating* pulse
modes for use at microwave frequencies. The idea was that
rather than trying to adapt lower frequency narrow band techniques to
the microwave bands, broadband/radar techniques would be used for
communications.

> Considering the lead time needed to develop a new mode, I
> think it is unreasonable not to go back at least that far.

PSK31 was developed in a few years by G3PLX and a small group of hams
around the world. Lots of other examples.

> I believe
> that the anti-digital curmudgeons delayed the implementation of
> digital
> modes by a matter of decades.

How was this done?

The main impediments to the implementation of digital modes by
amateurs (at least in the USA) were two:

1) Restrictive regulations, brought about mostly by the FCC's need
to be able to monitor amateur transmissions. However, note that
digital transmissions other than digital voice are not allowed in the
US HF 'phone subbands - which comprise the majority of the
bandwidth on those bands. Those rules force the digital

data modes to share only with Morse Code users.

2) The high cost of hardware. Only a decade ago, a PC
was a significant investment compared to a ham rig.

> It is interesting to note that the most

> police organization that has no ties to radio, except as consumers > (APCO
25).

They were developed for specific applications, though. Not for general
purpose use.

> > Furthermore, if the only technologies that you believe
> > should be saved

>
> Can you point to something in my post that makes such a claim?

The statement about throwing 14400 modems in the garbage.

> The
> only technology that I have derided as being too slow as to have
> value
> is Morse code that is sent by hand (less than 100 baud).

PSK31 and most HF RTTY are also less than 100 baud. Are they
too slow to have value?

> The Navy shut
> down its VLF network on the grounds that the data rate
> was inadequate.

But amateur radio isn't the US Navy. IIRC, the purpose of that
network was/is to communicate one-way to submerged missile
submarines.

> Perhaps it is time for the amateur community to take a similar
> step.

What form would that step take? Should amateurs simply not
use Morse Code any more?

The *test* for the mode was an issue of great contention among
radio amateurs. But until July 2003 the ITU-R treaty prevented
complete elimination of the *test*.

However, as far back as 1990 it was possible to get any US
amateur radio license with just a basic 5 wpm Morse Code
test and a doctor's note. Since April 2000, no doctor's note
has been needed, and since Feb 2007 no Morse Code test

at all.

How any of this has impeded the development or implementation
of digital modes is unclear to me.

> > those

> > Morse code test.

The Technician class license was created in 1951. Its Morse Code
test was always 5 wpm, until it was dropped completely in 1991.

IOW, as has been pointed out, practically all of the US amateur bands
above 30 MHz have been available for the development and
implementation of digital modes by amateurs, with no need for any
Morse Code test. Lots of bandwidth, too - all those bands except
222-225 are wider than all the HF/MF amateur bands combined.

Transmitting 50 kilowatts from a single site capable of covering most of
North America, using groundwave propagation, independent of solar
activity, is an "outrageously inefficient way to distribute a small
quantity of information?" Well, I do hope that you are hurrying to
write your Congressman to demand that the National Institute of
Standards and Technology put an immediate end to this grave outrage, and
profound waste of taxpayer's money that has been going on for decades.
After all, what does the NIST know about technology, or useful
communications? Perhaps as little as the engineers and marketers in the
economically successful and useful product field of WWVB watches and

clocks, in your estimation.

>despite having SMS availability.

I think you are underestimating the power of SMS. As for the comparison
to E-mail, I don't have to ask, as journalists have already done so,
including this recent article from Slate:

http://www.slate.com/id/2177969/pagenum/all/

Simply put, young people find appeal in the immediacy of small, but
low-latency messages sent in relatively large numbers over a long period
of time, and the information transmitted is far more rich and meaningful
that what you imply above. In many respects, this type of communication
is not stilted or limited, but almost provides the immediacy of a
conversation, without having to run up your voice minute charges or
leave your other callers unable to reach you due to the long-term busy
signal.

Young people do still use E-mail, but in circumstances for which it is
the better choice. They are not seeking some overall best "general
purpose communications" to get their messages across to each other.

>

>systems as examples of general purpose communications.

I didn't realize that only "general purpose communications" were considered worthwhile. Your previous reply argued that it was undesirable to use such a low-speed technology as Morse code given that there were many higher-speed alternatives (faster by "orders of magnitude" you said). I replied to you that fastest is not always best. Other issues (previously enumerated by me) might actually dictate the choice of lower-speed communications as the best choice.

I also don't see "general purpose communications" mentioned in Part 97. Many "single purpose, dedicated systems" are used by amateurs, and help fulfill amateur radio's Basis and Purpose. In many cases, a "single purpose" technology is far more useful than a misfit, one-size-fits-all, "general purpose" one.

Before we make too many assumptions about an undefined term, perhaps you can describe what types of "general purpose communications" you would consider to be worthy goals for the Amateur Radio Service, and which "single purpose" technologies you would like to see eliminated?

Would you also kindly define what is a "single axis of data," in terms familiar to those involved in communications engineering and technology? What, then, would be "multiple axes of data?"

>> To even give you a Morse code example, consider the simplicity and

> There is nothing about that that is unique to Morse. Any type of RF
>link would be usable in that way.

Yes. That is somehow a point of disagreement between us? In what way?

I did acknowledge that you could re-engineer the NCDXF beacon system
with one that uses, say, PSK31, but the bandwidth and data rate limits
would still remain. A PC with a soundcard would still be usable for
that system, as you note. I'm sure that the author of Faros could also
quickly adapt, and make a PSK31 version of his NCDXF beacon recording
software package.

Wow, these curmudgeons must have been very powerful and effective in
their obstructionism if they undermined entire areas of communications
technology development in this country over the last 30-40 years. I
didn't realize that our national technology infrastructure was so
inflexible and lethargic that it could not recover from these
influences, even after so many decades.

>> [...]
>> Furthermore, if the only technologies that you believe should be saved
>> from being thrown away are those at 14.4 kBaud and up,

> Can you point to something in my post that makes such a claim?

Just the introduction to your previous article, where you directly
compare the Baud rate of Morse code with that of "obsolete" telephone
modems. You stated that their data rates differed by "orders of
magnitude," implying that communications technologies that were "orders
of magnitude" slower than telephone modems could be dismissed as
obsolete. Following the natural extension of that argument, then the
only technologies that could be favorably compared to such telephone
modems, and meet your argued standard of non-obsolete, could only be
realized on high VHF and up. As I argued previously, use and advocacy
of Morse code has no bearing on the current deployment of such
technologies, as no Morse code test has been required to access them for
at least 17 years. The Technician-class license has existed for far
longer, and has only a minimal Morse code examination.

>The
>only technology that I have derided as being too slow as to have value
>is Morse code that is sent by hand (less than 100 baud).

So, to summarize:

slow-speed (less than 100 baud) PSK31 : "Good"

similar order-of-magnitude speed Morse code: "Bad"

So, it's not the speed you object to, it's the use of Morse code?
Couldn't you have just stated that, and not gone to the trouble of
bringing in other arguments like speed and bandwidth, or whether a
communications technology is sufficiently "general purpose" or not,
regardless of whether something "general purpose" would be the best
choice in a given circumstance? Just say that you don't like Morse
code. Others would at least give you credit for honesty.

>The Navy shut
>down its VLF network on the grounds that the data rate was inadequate.
>Perhaps it is time for the amateur community to take a similar step.

References please? A Google search returns no evidence that Navy
stations like NAA in Cutler, Maine have gone off-line. Are you possibly
thinking of their ELF experiments that were recently ended? Even if so,

what competing technology is the Navy contemplating that will reliably contact our submarine fleet that has "gone deep" under many fathoms of RF-attenuating sea water?

I also didn't realize that amateur radio had similar "networks" that would need to be shut down.

>> those
>> technologies are only practically realizable on amateur radio bands at

>> then someone *must* be to blame, well, you can't really dictate how the
>> world should turn out without taking an active role to help make it that
>> way.

> That last paragraph is incoherent. Could you rephrase it?

Looked pretty coherent to me, but for your benefit, I'll dissect it in detail:

"If you are saying that someone *else* should have developed these technologies ..."

In other words, amateur radio has failed to meet some standard of technology development. Other people were somehow "wasting" their time doing other things.

"... (other than you, of course) ..."

What have you done to make amateur radio a better place? Have you written your Congressman? Petitioned the FCC? Worked in the communications engineering and technology field? Developed amateur radio software and hardware solutions? You seem to be knowledgeable on many technical subjects, including the history of that technology over many decades. Did you try to change things, or are you asserting that you did not have the skills or abilities to help do so, even working with others over many decades?

"... and since they haven't, then someone *must* be blamed, ..."

I was implying that you were seeking scapegoats, as it is easier to blame others than look in the mirror.

"... well, you can't really dictate how the world should turn out without taking an active role to help make it that way."

In other words, Lead, Follow, or Get Out of the Way. "Sidewalk Superintendents" have very little influence on society. What is your

choice?

Also, some people seem to confuse actual solutions to problems (whether in amateur radio, or on the newsgroups) with a contest over who can become the most "outraged." To quote Jim Kelley, AC6XG:

"Outrage, and a buck-fifty, will get us exactly what?"

The only "pulse" reference that comes to mind is the pre-1979 emission
designator for what we now call "digital modulation" in the
International Radio Regulations. Nobody that I know, amateur or
professional (and most of the amateurs were professional communication
engineers) ever put it down.

Wouldn't it make more sense to include WWV and WWVH along with WWVB?
Are you familiar with the Internet-based ntp system? Then, there is the
matter of GPS, which has a time capability that is incidental to its
navigation function.

I don't see anything in that that contradicts my statement that SMS
is mainly used for messages of little importance. It is also called CMS,
for casual messaging service.

> I didn't realize that only "general purpose communications" were

A multi-purpose system that can match a single-purpose system on the performance of the objectives of the single-purpose system is generally, if not universally, considered superior.

Why do you want me to reinvent the wheel? Lets go to the source (condensed from Part 97.1):

* emergency communications
* contribute to the advancement of the radio art
* advancing skills in both the communication and technical phases of the art
* expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts
* continuation and extension of the amateurs unique ability to enhance international goodwill

> Would you also kindly define what is a "single axis of data," in terms
> familiar to those involved in communications engineering and technology?

A single quantity, like time or location

> What, then, would be "multiple axes of data?"

Two or more simultaneous quantities, like time AND location or course AND speed.

> So, in other words, you are actually agreeing with my previous reply to
> you that there are many useful Morse code based communications

There is probably no purpose for which Morse can be used as a machine language where there isn't a choice of other, better suited languages available. This includes aeronautical beacons. You are grasping at straws, now.

> Wow, these curmudgeons must have been very powerful and effective in

When you look at the development of the Internet, Linux and other
free software, you have to wonder about the infrastructure behind it.
How did it come about? There was no regulatory body. There were no
licenses. There were no "Elmers." Until recently, there wasn't even any
formal schooling available, except on the sort of machinery that existed
only within the Fortune 500. Early Internet users and developers had to
read O'Reilly books and figure it out on their own.
That showed great initiative. It demonstrated the sort of determined,
driven advancement of technology that was once seen in amateur radio.
But that sort of thing has passed ham radio by. It has been a long time
since ham radio was a source of innovation. I blame the Morse cultists
who hijacked amateur radio for use as their personal playground.

An amusing interpretation. It follows that trains and ships should be
discarded because they are much slower than airplanes.

You left out the faster mode of communication known as "voice." It is
widely used on HF. Further, I once looked at a band plan that showed how
DV could be used on HF. They described a system of HF DV that took up
just slightly more bandwidth than SSB and substantially less than AM.

I am thinking of the site in the Upper Peninsula of Michigan and the
increased reliance on TACAMO aircraft (at the time of the shutdown).

> I also didn't realize that amateur radio had similar "networks" that
> would need to be shut down.

The infrastructure that is being wasted on Morse includes band
segments that have, until recently, been reserved for its exclusive use.
I am very glad to see that almost all CW segments now allow data modes
(50-50.1 and 144-144.1 being the only exceptions). There is also the
inclusion of keyer provisions in HF radios. It will be interesting to
see what the marketplace does to code tapes and code keys. I don't think
they will last long.
While Morse supporters often point to treaties, the fact is that the
US was one of the last countries to abandon the Morse requirement for an
HF license. Other countries began dropping that requirement many years
earlier, while still claiming to be in compliance with their treaty
obligations. How do you explain that? To me, it sounds like the FCC used
the treaties as a pretext to keep the code requirement in order to
placate the ARRL and the Morse zealots.

I have worked in the electronics industry. I have made my views clear
to any and all who had an interest in the subject. I made those views as
clear then as I have done in this newsgroup.

Good mention, Paul. Ummm...the data rate is rather exactly one bit per
second and takes exactly 60 seconds to send one frame of time and date
data. :-)

ALL the details are given at www.nist.gov under the 'Time Frequency'
page, including propagation charts at various times of the day and
for various seasons. This southern California region can regularly
receive enough signal to set radio clocks even if at an approximate
distance of about 900 miles to Fort Collins. In 2005 my wife and I
drove to southern Wisconsin and my La Crosse radio wristwatch never
failed to set itself properly even though some of our overnight stays
were in hotels having steel structures or in among other buildings.
We have two radio wall clocks in our residence and those are exact
enough to compare on-the-second with HF time ticks from WWV and WWVH.

[I won't quibble about the PPM mode descriptor since the full details
of modulation are given at NIST website... :-)]

>According to this recent demonstration on the Tonight Show with Jay
>Leno:

Ahem...<quibble mode on>...that little bit on the Tonight Show was a 'setup' gig that employed two young local male actors as the (described) "text messaging experts" but the two hams (one of which would very soon become marketing director for Heil Sound) were real. That is the input I got directly from a reliable staffer on the Tonight Show. Took a few phone calls to get that information but it is an advantage of living inside the entertainment capital of the USA (aka Los Angeles, CA)...and the NBC western Hq is only about 5 miles south of my place, down Hollywood Way to Alameda and then east about a mile. That whole bit was really a send-up on the popular fad of text messaging done by teeners and young adults.

That bit is about as 'real documentary' as Leno's send-ups on the 'street interviews' with ordinary (apparently clueless) younger folk on various kinds of knowledge. In short, ONLY for gag purposes.

>To even give you a Morse code example, consider the simplicity and
>effectiveness of the NCDXF beacons running on the HF bands:
>
>http://www.ncdxf.org/beacons.html

HF beacons are neat for their purposes of checking on HF propagation paths, but they aren't 'communications' in the regular sense. Those were also designed for simplicity at the various receiving sites but require rather precise time-of-day at each receiver in order to get the start of each cycle.

While I had not intended to restart some morse-vs-others kind of argument, I have to note where I began HF communications with the US military some 55 years ago. Not a single communications circuit used any form of morse coding to achieve a throughput of nearly a quarter of a million messages per month (average in 1955). The majority was teleprinter of the 5-level 'Baudot' format running at 60 WPM equivalent rates. 24/7 of course with TTY distributors to to automatically start another p-tape reader when the other reader was done. FSK 'spread' was then 850 cycles, not the narrower 170 Hz of today. Radio circuits (where I was assigned) spanned the northern Pacific from Saigon, Seoul, and Manila to Anchorage, Seattle, San Francisco, and Hawaii.

In 1955 the Army tried an experiment on a few select radio circuits to push the Teletype Corporation's machines to 75 WPM equivalent. End result of that was a failure rate more than double that of the standard 60 WPM equivalent machines. Teletype seems to have achieved an optimized design for 60 WPM equivalent; their 100 WPM equivalent next-generation machines used a different electromechanical system, were quite reliable at that rate.

>beacons.

Quibble mode on again. The LF aeronautical beacoms are what you are writing about but they are NOT used much at all for aircraft radio-navigation now, nor were they a half century ago. Present-day (and in 1962) radionavigation over land is done mainly by VOR (Very high frequency Omnidirectional Radio range) using a unique 30 Hz antenna pattern rotation with a reference phase of 30 Hz sent on a 9.96 KHz subcarrier. Aircraft VOR receivers have used very simple (even for tube circuits) to determine their bearing to a ground station. These were simple enough (and low cost enough) for small private general aviation craft and the US VOR system was adopted internationally in 1955. For distance to a ground station the civil method emplyed a low L-band interrogator sending a (jittered) double pulse and measuring the return delay (plus 50 uSec) from the ground station responder. This DME (Distance Measuring Equipment) was compatible with military TACAN (TACtical Area Navigation) signal format and the FAA combined VOR-DME-TACAN equipments on the ground and those are identified by the contraction VORTAC. On aeronautical charts (from the government, usually reprinted by private companies) there is usually a magnetic bearing compass circle (VOR and civil-use-TACAN reference magnetic reference, not actual north reference)...the VHF frequencies (DME and TACAN frequencies have been paired with VOR), ICAO 3-letter ID, and the dot-dash pattern of that 3-letter ID.

The elegant simplicity of VOR is that it will permit AM Voice IN the ground station transmitter without disturbing the antenna pattern modulation or the reference phase subcarrier. In congested urban areas where a lot of general aviation aircraft abound, FAA stations routinely use VOR voice transmissions to aid civil pilots, easing the pilots' workload by providing extra information such as WX, special conditions at an airport. My local airport (BUR) now known as Bob Hope Airport, the FAA used to send a repeating voice announcement of local WX conditions, airport info, etc., all identified by a letter, beginning with A or Alpha at midnight. The tag on the voice tape loop was "please tell the tower you have received 'information <Foxtrot or whatever letter>'" when requesting landing at that airport. Yes, some VORs transmit the ICAO 3-letter ID as a low-modulation on-off tone in slow morse but I have yet to find any civil pilot, beginner to experienced, who USES that code for radionavigation.

>Focusing simply on information rate disregards other aspects of the
>communications and the channel over which it is transmitted. These
>important aspects include the bandwidth and propagation characteristics
>of the available channel, the complexity of the required transmitting
>and receiving equipment, the amount of data that needs to be
>transmitted, and how quickly and often it needs to be conveyed.

Martinez' PSK31 was rather precisely designed for low (<500 Hz) bandwidth coincident with non-typists typing rate of about 30 WPM

equivalent, all in congested Data slices of amateur radio band 'bandplans' on HF. With relatively simple electronic terminal equipment with microprocessor-aided operation, I/O memory space and programming is a minor addition to handle faster typists' input, even burst typing on a keyboard to 100 WPM or so equivalent.

The OLD FSK bandwidths on HF (of a half century ago) took up about a whole KHz while using an 850 cycle shift. On the 3 KHz of an old commercial-format SSB channel (one of four), as many as 8 separate TTY circuits could be frequency-multiplexed. A more reasonable shift (to 170 Hz) occurred later with improvements in terminal equipment technology, is the norm now, even for 100 WPM equivalent teleprinter rates of those still using electromechanical terminals.

BANDWIDTH occupancy seems to be the primary driver for modulation rates on HF. YMMV.

There are more complex methods of modulation-demodulation that have been available for some time. DRM (Digital Radio Mondial) is one such as has been verified on HF for 'SW BC' (Broadcasting). That DRM has not spread well among broadcasters has little to do with technical details of modulation-demodulation, but rather in the poor propagation conditions of this sunspot cycle limiting broadcasters' range. If a signal can't get through at all, NO modulation method is going to help. Besides, with the availability of satellite radio broadcasting, 'SW BC' has gradually shifted over to that method rather than using HF directly.

>I'm not sure that I understand your line of reasoning here. You are

>Witness the success of Tucson Amateur Packet Radio (TAPR):

It is disingenuous to 'force' an argument by introduction of something not overtly stated by the originator.

TAPR and its membership have done some excellent technical development and spread of such technology. Note also that its membership is made up of radio amateurs who've been licensed for a while and are NOT technical beginners in radio or electronics.

In the view of the ENTIRE world of radio, not just amateur radio, the use of morse code modes to communicate has steadily decreased for over a half century. It has decreased so much so that some non-amateur radio services either stopped using that mode or never considered it for a new radio service introduced in the last half century. As a prime example, the changeover to GMDSS and replacement of the old 500 KHz international distress and safety frequency which used morse code exclusively. Even the USCG stopped monitoring that

old 500 KHz frequency. GMDSS was designed and approved by the Maritime Community, not by amateurs.

The decline, or perhaps more accurately, the failure to keep up with overall population increase (of USA) amateur licensees is (in my opinion) NOT due exclusively to 'USE' of morse code. US amateur radio license totals peaked 5 years ago. In general, by informal polling, newcomers are NOT embracing morse code modes...nor are they flocking to HF amateur bands. PART of that MAY be due to the insistence of the 'amateur radio community' to hang onto the morse code TEST forever. Part of that is due to the slow acceptance of international amateur radio to change the international amateur Radio Regulations away from old standards. WRC-03 of nearly 5 years ago allowed individual administrations to drop the morse code test for an amateur radio license. The USA did not follow through on that until more than 3 years later. [precisely, the end of July 2003 to 23 February 2007]

[in response to 'Klystron']

>If you are saying that someone *else* should have developed these >technologies (other than you, of course), and that since they haven't, >then someone *must* be to blame, well, you can't really dictate how the >world should turn out without taking an active role to help make it that >way.

That's rather strong wording from a leading person of this newsgroup, isn't it?

For a very long while, ever since I first began as a pro in HF radio communications, PART of the 'amateur radio community' had been very busy 'dictating' how the amateur radio world should be by the continuation of the morse code test for an amateur radio license. OTHERS, including those of us (like myself) who were NOT licensed in amateur radio have actively campaigned to remove that test from US amateur radio...even though other countries had already preceded the USA in abolishing that code test. I won't say that I've 'been responsible' for any USA changes but I was certainly 'active' in trying to do so. The FCC apparently agreed with some of my views as well as so many others supporting that test elimination. It came to pass. But, that coming might have been too late to change others' interests in US amateur radio.

In my electronics work that began (professionally) in 1952, I've been involved in a lot of different electronics and modes and modulations of RF that were never allocated for US amateur radio use. Some of those just wouldn't apply to two-way communications but others would apply. There are still some US regulations that need altering but a very vocal PART of the 'amateur radio community' seems very adamant about NOT upsetting the status quo. The future of US amateur radio does NOT depend solely on them.

Want some fun? Compare the time ticks received from WWVB, WWV,
NIST-on-line, and GPS. What, they are not all simultaneous? Welcome
to the real world. GPS time does not correlate with UTC by any means
(several seconds difference).

In one of the first digital military command and control system that I
was involved in during the early 1960s, we used rubidium standards at
our switching centers to get accurate time synchronization, and even
then it was rather crude because the line delays varied so much. HF
propagation (WWV/WWVH) is even worse in that regard.

As those of us who had our ears to the hull, so to speak, know very
well, the main reason was to get rid of "Sparks the Radio Operator"
who was a very large expense for the traffic that was being handled by
non-Morse methods. Some could be retrained as service technicians,
many could not and took retirement.

Be aware, though, that there are still several Public Coast Stations
in the US that are capable and do handle Morse traffic, and twice a
year the USCG fires up its Morse stations. It's not all dead.

I've compared each of our three radio-set clocks at this residence (in Los Angeles) and find excellent correlation between their one-second changes and both WWV and WWVH. Don't have any GPS receiver to try the same.

In 1960, while working in the Standards Lab of Ramo-Wooldridge Corp. in Canoga Park, CA, I got to pull some OT on Saturdays to measure the difference between east coast transmissions of WWV and the local General Radio frequency standard. Just a plain old quartz crystal standard oscillator driving divider chains to the built-in clock.
I would record the microseconds of difference between local clock ticks and WWV ticks from the east coast. Not much variation in a week's time, don't remember just how much (it was 48 years ago).

Yes, propagation on HF does vary but it is sometimes exaggerated. Before R-W went into a business tailspin, the Standards Lab was ready to get a low-frequency HP receiver for 20 KHz to improve on establishing a local, secondary frequency standard. No joy on that corporation which was eventually sold off. All I ever got to see was the 'diurnal shift' of 20 KHz phase recordings at sunrise and sunset.
:-)

For what it is worth, my paper reference on TTYs is NAVSHIPS
0967-255-0010 "Principles of Telegraphy (Teletypewriter)" from
Department of the Navy Electronic Systems Command. I bought it
from the US Government Printing Office back in the early 1970s as
a reference. [I am an Army veteran, not Navy] The first chapter of
Part A in that TM has a nice historical record of 'telegraphy'
(which includes teletypewriting). It says only "60 WPM" but mentions
other Baud rates.

As far as we in Army communications of the mid-1950s were concerned,
all the teletypewriters that the Army used were called "60 WPM" and
only the teletypewriter maintenance people (and a few carrier systems
types) cared about many numbers. We did have Distortion meters used
to determine irregularities in a circuit.

BTW, the Army and the rest of the military used Teletype Corporation
Model 15s through 19s, variation being only the paper tape punch
and transmitting distributor (P-tape reader).

>Now when you get to ASCII, the old Teletype machines transmitted 8

>numerically equal to the baud rate. 100 baud -> 10 ms/bit ->
>100 ms/char -> 10 chars/sec -> 600 chars/min -> 100 wpm.

OK on that. Teletype Corporation Model 28s (explained in intimate detail in the NAVSHIPS TM I referenced) would easily do 100 WPM equivalent 24/7 as long as supplied with paper, ribbon, and oil. :-)

>...word PARIS contains 50 bit times counting the space. So one word
>per second is 50 bits per second and 60 wpm. As an aside, the
>military sends a lot of encrypted 5-letter code groups, so instead
>of PARIS the Signal Corps uses CODEZ as a test word more statistically
>correct for their kind of traffic. And CODEZ contains 60 bits.

I never encountered any test word 'CODEZ' 1953 to 1956, nor elsewhere in the Signal Corps or in DoD contracts after that. In the mid-50s we simply used a continuous 'R-Y' generator (from Teletype Corporation) for circuit checks with the old 60 WPM equivalent machines. Teletype Corp. also made a 'fox test' generator consisting of a half dozen cams operating as many switches to generate "The quick brown fox jumped..." sentence (with Tx station ID at the end) for radio circuit checks.

Electromechanical teletypewriters are now rather passe' in the military and government (I use a French word to replace Obsolete which so many have trouble with). It is all electronic and, for permanent installations, over the DSN (Digital Switched Network) anywhere...including interfaces with the regular civilian telephone infrastructure. The DSN allows encryption on-line as per protocol. For field radios, the electronic data protocols are compatible with hard-wired ones and also allow encryption on-line. It was so in the first Gulf War (1990-1991) which 'battle tested' the whole military communications network DX to no-DX via TDRS (Tracking and Data Relay Satellites) and other military commsats from/to Florida to/from the Middle East.

Not having any access to the DSN or intimate details of military cryptographic equipment now, I have no exact knowledge of what is used for a test word, sentence, or whatever. For the OLD electro-mechanical teleprinters, I'd say the specifications for a specific TTY Distortion Meter would tell the exact story on timing for both polar and non-polar TTY circuits and equipment.

Each GPS sattelite has it's own on board atomic clock and the system can
easily provide UTC with accuracy on the few microseconds level with an
ultimate limit of +/- 340 nanoseconds using an appropriate receiver and
hardware.

GPS is the basis for most of the current NTP time servers.

It has been common convention in wireline telegraphy to count "one
word"
as having 5 characters followed by a space. The origin of that seems
to be
that it was most advantageous for humans to use/remember while using
the Commercial Codes, a form of encipherment both to protect
information and to reduce the number of words in a telegram.
Bentley's
Commercial Code seems to have been the most used with 17 editions,
publishing Code Books for any business or government.

As a result of those Commercial Codes, actual cryptographic codes
also used 5 characters followed by a space, hence the term '5-letter
groups' in referring to a "word." By the time of WWII starting, the
cryptographic systems were more advanced and it was not possible
to tell one 'word' from another but it was common practice to send
encrypted text as 5-letter (or character) groups; the actual space in
clear text was determined by the null or space substitute in poly-
alphabetic rolling-key encryption codes. (reference: M-209 Code
Converter used in the field in Europe by US forces)

Perhaps I should clarify. When I asked the above question, I meant
specific technologies and examples of communications systems, not a
restatement of the general strategies of the Amateur Radio Service that
are enshrined in its Basis and Purpose. The Basis and Purpose
enumerates high-level goals, but does not specify the implementation
details, including the specific technologies.

I'm sure that we are all familiar with FCC Part 97.1, and restating it
really wasn't the answer that I was looking for. Could you please be
more specific?

[...]

Sorry, but I've got to call baloney on this one. The individual who
appeared on the Tonight Show who sent the text message was actually Ben
Cook, and not an actor. Ben held the world's record for fastest text
messaging:

http://en.wikipedia.org/wiki/Ben_Cook

The two Morse code operators, Chip Margelli, K7JA, and Ken Miller,
K6CTW, have attested to this being an actual contest with an actual,
previously unknown, message to send, which was sent both by Morse code,
and by text messaging. And there's no disputing that fast Morse code
would always beat an SMS text message of the same length. See:

http://www.arrl.org/news/stories/2005/05/16/3/?nc=1

Two named witnesses would appear to trump one anonymous source.

Therefore, your anonymous "reliable staffer" seems anything but.

WWV and WWVB transmitters are at the same site in Fort Collins, CO. I
was there.

> Are you familiar with the Internet-based ntp system?

Such a system requires connectivity to the internet. WWVB does
not; just requires a receiver.

> Then, there is the
> matter of GPS, which has a time capability that is incidental to its
> navigation function.

GPS can only be used where the satellites can be "seen" by the
receiver.

The WWV system still has its uses. I suspect its cost is trivial
compared to other systems, too.

The WWV system isn't just about time. The transmitters are also
frequency standards. That's two axes of data. For those of us who
use HF, they are also propagation beacons - that's three axes.
There are also voice geomagnetic announcements - that's four axes.

> There is probably no purpose for which Morse

Yes, there is: Any application where the sender or listener
may be a human rather than a machine, and where an
interface like a keyboard/screen isn't practical.

> When you look at the development of the Internet, Linux and other
> free software, you have to wonder about the infrastructure
> behind it.
> How did it come about? There was no regulatory body.

Actually there was and is. "The internet" as we know it could
not exist without certain legislation that made it possible, and
a huge commercial investment of communications infrastructure
to support it.

What we call "the internet" developed from ARPANET, which was
a DoD thing, just like GPS. Swords into plowshares and all that.

> There were no
> licenses. There were no "Elmers."

Actually, there were, just not in the same form as in radio. The
licenses were regulations; the Elmers were people who developed
easier-to-use systems.

How do you define "recently"? I got started online in 1997, and
"the internet" had only been publicly available for a few years at
that point.

> That showed great initiative. It demonstrated the sort
> of determined,
> driven advancement of technology that was once seen in
> amateur radio.

The internet was and is a commercial enterprise. Amateur radio
was never such an enterprise, by its very nature.

> But that sort of thing has passed ham radio by.
> It has been a long time
> since ham radio was a source of innovation.

When did it exist, and when did it end?

> I blame the Morse cultists
> who hijacked amateur radio for use as their personal playground.

When and how did that happen, exactly? I see a lot of claims but
no specifics or history.

> The infrastructure that is being wasted on Morse includes band
> segments that have, until recently, been reserved for its exclusive

> use.

What band segments are those, specifically? In the USA,
there have been no Morse-code-exclusive-use band segments (except on 6
and 2 meters) for many years.

My 1962 ARRL License Manual has the FCC rules for the Amateur
Radio Service, and at that time - 46 years ago - there were no
Morse-code-exclusive-use band segments on the HF bands, or
any VHF/UHF band above 2 meters. And the rules weren't new then.

OTOH, even today, data modes are prohibited from using the
voice subbands in the USA.

Do you consider a rules change that happened more than 46 years
ago to be "recently"?

> I am very glad to see that almost all CW segments now allow data > modes
> (50-50.1 and 144-144.1 being the only exceptions).

"Now" includes at least the past 46 years.

> There is also the
> inclusion of keyer provisions in HF radios.

Which costs practically nothing.

> It will be interesting to
> see what the marketplace does to code tapes and code keys.

There are more keys on the market now than when I became a ham 40
years ago.

> I don't think they will last long.

I think they will.

> While Morse supporters often point to treaties, the fact is that the
> US was one of the last countries to abandon the Morse
> requirement for an
> HF license.

Yes - because of the slowness of the FCC to change Part 97
after the treaty changed in 2003.

> Other countries began dropping that requirement many years
> earlier, while still claiming to be in compliance with their treaty
> obligations.

Which countries? Please be specific.

> How do you explain that?

I only know for certain of one country that had a no-code-test
HF amateur radio license before 2003. There may be others,
but not many.

Japan has long had a nocodetest HF amateur license called the
4th class. But that license was and is limited to low power levels
(10 watts) and to parts of the amateur bands which are worldwide
exclusively allocated to amateurs.

Japan's claim was that the treaty exists to prevent interference
between users of different radio services and between users o the same
radio service in different countries.

By limiting 4th class JA hams to only worldwide amateurs-only bands,
interference to other services was prevented. By limiting 4th class
amateurs to very low power, and since Japan is an island nation,
interference to amateurs of other countries was prevented.

Nobody challenged Japan on it, either.

But Japan still requires a Morse Code test for at least some of its
higher-class amateur licenses. The USA does not.

> To me, it sounds like the FCC used
> the treaties as a pretext to keep the code requirement in order to
> placate the ARRL and the Morse zealots.

But why? In 1990, FCC created medical waivers for the 13 and 20 wpm
Morse Code tests, but not 5 wpm. FCC said they would have waivered all
the tests except for the treaty. Same for the reduction of all license
classes to 5 wpm in 2000. Opposition to these changes did not stop
FCC.

Would you have preferred that FCC violate the treaty? Or create a
license class similar to Japan's 4th class?

Some additional info about US subbands-by-mode, in reply to Klystron's mention of exclusive Morse-code-only band segments.

In the following discussion, "modes" means "modes authorized for use by amateurs on the specific amateur bands in question".

The current US regulation of the HF amateur bands permits Morse Code everywhere, voice and image modes on specific subbands, and data modes wherever voice is not permitted. Morse Code has no exclusive subbands at all,
and is rarely used in the 'phone subbands. (I've been an active ham 40+ years and never used Morse Code in an HF voice subband). These regulations are descendants of those going back many decades, to times when amateur operation on HF consisted of Morse Code, voice and nothing else. (For example, HF RTTY operation by US hams was first authorized in the late 1940s, but only 45.45 baud 5 level Baudot code was allowed.)

A few years ago, ARRL proposed "Regulation By Bandwidth", which would have separated the various modes by
the bandwidth of the signal rather than whether it was voice, data, image, etc. For example, under the proposal,
any mode less than 500 Hz wide would be allowed in the 500 Hz and wider subbands, regardless of whether it carried
voice, data, image, Morse Code or other information. There were also proposed changes to where automatic and semi-automatic data-mode stations could operate.

The proposal got an RM number and a comment period. The comments from those interested were overwhelmingly against the proposal. It was revised but to no avail; ARRL finally withdrew the proposal.

IMHO, the most common reasons for opposition that I saw reading the comments were these (in no particular order):

1) 'Phone operators did not want any data modes in the 'phone subbands.
2) "Robot" (unattended) digital stations should be confined to small subbands.
3) Concern that amateurs would have to be able to measure the actual occupied bandwidth of their transmitted signals or be subject to violation notices and complaints. Older equipment and hams who could not afford spectrum analyzers would be forced off the air seemed to be a common fear.
4) AM voice would be limited to 9 kHz bandwidth and was essentially "grandfathered", but other modes could not

exceed 3.5 kHz on most bands
5) The existing rules did not need changing.

The FCC did act on an earlier "refarming" proposal by ARRL, and widened the 'phone/image subbands on some of the HF bands at the end of 2006. However, FCC went far beyond the ARRL recommendations in the amount of change. This effectively reduced the spectrum space available for data modes on those bands, since they could not be used where 'phone is allowed. The most radical change was on the 80/75 meter bands.

About the same time as the "Regulation by Bandwidth" proposal, a group of less than a dozen amateurs
calling itself the "Communications Think Tank" (CTT) proposed the even more radical change of eliminating subbands-by-mode completely, and simply specifying a maximum signal bandwidth for each band.

This proposal also got an RM number and a comment period, but the comments were even more solidly against it than against "Regulation by Bandwidth". The opposition was so overwhelming that CTT also withdrew its proposal.

The point of all this is that ARRL and others have made proposals to fundamentally change Part 97 in ways that would
favor the use of data modes, and the US amateur community has repeatedly and strongly opposed those proposals.

There's only a couple of short video clips from Guinea-Bissau, much
more from Sierra Leone and Botswana (including a colorful cast of
characters) and quite a bit of Finland (shot in the early and mid-90's
and in 2003). The DVD's will be fleshed out with photos and audio clips.
Sample clips may well be made available.

You're right. Add South Africa to the "etc." Even if we added those
amateur populations, the RSGB Handbook wasn't widely distributed but it
was known to be a very good one. Its sister publications--and I'm
specifically including the series of "Technical Topics" books by Pat
Hawker--were also very good.

>> As I recall, the RSGB handbook

I bought mine along with one of the "Technical Topics" books at RSGB HQ
in 1978 when the place was still located on Doughty street "just down
the street from Mister Dickens' house". Those books and a one year
membership in the RSGB equaled a bunch of 1978 dollars.

> Having bought "real" engineering books, I can say that both the ARRL
> and RSGB Handbooks were and are true bargains.

I'd have to agree. The current ARRL Handbooks have much more material
than the older ones. The ARRL Antenna Handbook is another bargain.

> The ARRL Handbook back then was mostly the work of W1DX,
> aided by the staff. The book evolved over time - the whole book
> was not rewritten every year.

Agreed. There were often just minor changes from one year to the next.
I still have a number of the early 1930's Handbooks on the shelf here.

> The RSGB Handbook had many authors, and underwent serious
> expansion and revision between editions. Since there was not
> a set schedule for when the next edition would come out, the
> changes were much greater.

It was a similar story with the excellent "RADIO Handbook" edited by
Bill Orr. It was updated only periodically and not on any particular
schedule. I'm not certain how many contributed to the effort though.

> Friend of mine is trying to collect all the post-WW2 Handbooks,
> and has most of them. He has all the post-WW1 QSTs, in part because an
> OT gave him a lifetime collection, knowing he would appreciate and
> care for them.

I'm not bothering will all of 'em so I have selected editions from the
thirties through present day. I haven't bought one since 2003. The
League currently has the 2007 Handbook on sale at a bargain price so I
may have to grab one of those.

W4HAV, then one of the corporate VP's at Cincinnati Milactron, gave me a
run of 1934-1958 QST. That was the start of my collection. I bought
the 1958-1963 and the 1920-1933 runs, a year at a time from various
hamfests, typically in one-year bundles. I have only one issue from
1919 and that cost quite a bit. I ended up purchasing the QST CD's
covering the early period.

> The Southgate Library keeps expanding, too. What you see in the shack
> picture is but a small part of it. Then there's the stuff I have
> in electronic format...

The expanding library is one of my worries about a move. There's mostly
complete run of Popular Electronics through the early 1970's, a mostly
complete run of Electronics Illustrated from the same period, a mostly
complete run of 73, a mostly complete run of Ham Radio and Ham Radio
Horizons and a complete run of CQ from its beginning in 1946. It took a
number of years to find some of those rare 1946 issues. There's
twenty-some feet in technical books here in the shack with the overflow
out in the heated barn.

> But what about parts?

They weren't taxed at anywhere near that. That same thing extended (and
may still extend) to imported automobiles. My '95 Dodge Neon cost me
around $12,000. It's European equivalent, the Chrysler Neon, sold in
Finland for $44,000. A Lada (Russian Fiat) cost about $20,000.

WNOP was a 1 KW daytime only jazz station in Newport, Kentucky from the
fifties until just about a decade back. Their studio, for the last
twenty or so years of the station's existence, consisted of three large,
connected vertical steel cylinders. The whole shebang was painted
bright orange and bobbed up and down on the Kentucky side of the Ohio
River across from Cincinnati. The transmitters and three-tower critical
antenna array were on top of a hill in the Delhi neighborhood of Cincy.
Until the early 80's, WNOP's transmitter was a 1948 Raytheon running a
pair of 833A's at a nice dull red glow.

The guy who owned it didn't have much money to spend on a repair. Transformers capable of handling a KW were not found lying about. His amp ran for many years with those copier transformers and, from the outside, his amp didn't look any different from any other Heath Warrior.

>> Yep, relatively low plate voltage and high current jobs. &#65533;

> better deal.

Well, not just "may be" but, IMO would be the better deal. An 811A is good for 65 watss plate dissipation for 260 total watts of dissipation for four. Four of the 572's are capable of dissipating 640 watts for just a little more money.

> The solid-state option has been around for decades, but the high cost
> stops a lot of hams.

The MFJ AL-600 costs roughly what the company's AL-572 runs. The AL-572
will run 1000 watts CW output. The solid state AL-600 runs 500w CW.

> In April 1976, a legal-limit solid-state all-band HF linear amp was

> place.

Well, the 8874's weren't terribly expensive when introduced. In fact,
neither were tubes like the 3CX800, but they price increases have been
out of line with other tubes. Ten-Tecs latest high power amp, the Titan
III, uses a pair of the Russian 4CX800 tetrodes. Those are quite
reasonably priced compared to the 3CX800 triodes.

> Unlike almost all commercial/military applications, in ham radio,

Right. Destroying one or more high power vacuum tubes while in the
employ of a company or government with deep pockets isn't the same as
doing so when you are the guy responsible such expenses.

>> Well, there's likely a move in my future and something's going to > have t

I'm fifty-nine and it is likely time to decide which material things I
hold dear enough to hang onto for the long run. It is probably about
time to simplify my life. I can make some folks smile by giving them
some things. I can sell some of the items and generate a little income
instead of paying someone to haul them to a new location.

My grandparents always sat at home and we did the traveling even when we lived in Florida in the pre-Interstate Highway days.

> Still, all that means is you draw distance circles around where the
> kids are. Doesn't mean you have to live down the street.

If the kids have jobs which cause them to relocate every few years, it might be better to choose a place you like. We're a much more mobile society than ever. There are exceptions. My neighbor was born in his parents house across the road. That's all the farther he ever got from home. Now his son has the old family farm and a younger son has built a home 1/4 mile down the road. This approaching coal mine means a windfall for me. It is a family tragedy for the neighbor and his family.

People flock to states with no income tax or with no tax on pensions or government pensions. A lot of those states are in the warm, sunny

southland.

> OTOH things like health care costs, rising energy prices, etc.,

It's gospel. My mentor lived along the New River at Hinton, West
Virginia. Hinton sits at 1200-some feet above sea level, but is
surrounded by 3000 foot or better mountains. He never installed a beam
antenna. There'd have been little point. Most of his DX was worked on
40m, where the wave angle of arriving radio signals was often higher
than on upper bands.

> But a good example of the problem, and the need to get the
> RE attorney and realtor to understand *exactly* what you
> will accept.

Look at the property. Ask questions. Get confirmation in writing.
Take along a portable receiver. No place is a good amateur radio
location if there's some noise source blotting out big pieces of the
radio spectrum.

> You have the most important resource, too: Flexibility. You don't have
> to move this month, or this summer, or land in a specific school
> district or some such.

That's right, but I'm not looking forward to dismantling antennas and
towers and putting something similar up in a new location. I shudder
when I think about holes to be dug, concrete to be poured, etc.

>> I'm thankful that my XYL and I agree that neither of us wants to be

Best is that she doesn't object to the aluminum and copper overcast. I have friends whose spouses have apparent veto power over towers and antennas.

>> • I'm thinking 3 or 5 or 8 acres. *grin*
>>
> Think big, think flexible. Could you subdivide some acres for other
> homes? Lease for farming?

One of my friends rented some of his land to a local farmer. After a few years, it became more trouble than it was worth. I don't want to spend large chunks of my life just mowing grass. Some land can be allowed to grow up, leaving cleared areas for towers. Some can be planted in widely spaced clumps of trees. I think my pal intends for some of that land to be used for beverage antennas for 160 and 80m. He has a farm tractor and will just brush hog the land a couple of times yearly.

One local fellow (retired from the Postal Service) bought up better than 1,000 acres of hilly land out the ridge from me. He became a millionaire after his retirement in just one short day. How? He sold a million dollars worth of timber to the Amish.

I don't think many folks have suffered a fatal heart attack while burning it, heh.

Hello Cecil!

You are correct, sir! Thanks!

While it could be argued that the five channels known as "60 meters"
are not be an "HF amateur band" in the sense that, say, 20 meters is,
they are HF and only upper-sideband voice is permitted to US amateurs
there.

So amend the above to read:

"The current US regulation of the HF/MF amateur bands permits Morse
Code on all frequencies except the five USB-voice-only channels known
as '60 meters', ..."

Radios are built with features that people expect, and most hams do
indeed expect a keyer these days. to not have one would indeed cost sales.

Even among those who do not use the keyers to send Morse, the keyer
function can be used to reduce the duty cycle when tuning an amplifier,
which will stress the tubes less in the event of a bad initial setting.

> propagation (WWV/WWVH) is even worse in that regard.

My understanding is that ntpd can handle that problem quite well. An
OPTIMAL setup would involve 1 computer per radio, each acting as a radio
controller (also called a strata 0 server). You could have a radio for
WWVB or WWVH, a second radio that is set to scan the WWV frequencies and
a third "radio" for GPS. Those 3 computers would connect to a fourth
computer that would act as a strata 1 server. The result would be a time
server that is as accurate as if it were connected to other ntp servers
via the Internet. Such an arrangement is sometimes used by firms that
need metrology-grade time service on a secured, internal LAN.
By the way, do not be put off by the expense of the four (or more)
computers described above. According the ntp documentation that I have
read, they need to have at least 100 MHz processor speeds for optimum
accuracy, but there is no benefit in going much above 100 MHz. Thus, a
pile of old, junkyard computers will do the job quite well and at an
aggregate cost of $20 to $100 in total.

See my response to Phil Kane. A computer running ntpd can get
metrology-grade time service from radio signals. ntpd can use radio
only, Internet only or both.

> > Then, there is the matter of GPS, which has a time capability

In or near the continental US, that is not an issue.

No, it's an incidental benefit. It does not require the transmission
of additional information.

I take it that you don't know what "machine language" is. Humans are
not supposed to be involved. If they are, it's not machine to machine
communications.

Utter hogwash. It started out as a network of Universities and a few defense contractors' laboratories. Much of the funding came from the individual Universities. The contribution of the government (via the defense contractors) was not absolutely necessary. Besides, after the Tappan worm incident, the networks were split into ARPAnet and DARPAnet (with a "D," as in defense). The public Internet is descended from the small slice of that pie.

The Internet opened to the general public in 1993 and 1994. At that time, there were essentially no courses at accredited Universities that covered UNIX, TCP/IP, the Internet or related topics. You had to learn it on your own. The Universities mainly taught MVS and 360/370 architecture.

> > That showed great initiative. It demonstrated the sort of

The Internet was not commercial in origin. When I first gained access, I had to sign an agreement not to use it for commercial purposes. Sending out for pizza via e-mail would have been a violation and would have resulted in account cancellation. But than, that was long ago. Spam hadn't been invented yet.

The CW bands were those band segments that excluded voice. Until
fairly recently, there was no such thing as "data." There was some RTTY,
but it was never a major issue. For many decades, the traffic in the HF
ham bands was SSB voice or CW. A pie chart would show a very small slice
labeled "other."

[...]
> > It will be interesting to

I'm not going to spend a lot of time doing your research for you, but
there was more then one treaty and those treaties expired or were
modified over a period of years. No-code HF licenses came about over
time in a number of countries. The US was either one of the last to drop
code or was dead last to do so.

If you say so, then it is so. All I've got are some acquaintences IN
the entertainment industry who work behind the camera...plus five
professional actors (who don't count in this particular discussion).
That 'recent demonstration' was over a year ago, was it not?

"The Tonight Show with Jay Leno" is an entertainment vehicle. It is
not a documentary source of absolute facts. All such 'talk' shows
are convenience outlets for Public Relations in this capital of
motion picture and television production of the USA. MOST of the
movie and TV production in this city lives or dies by PR.

If I had become persuasive in my inquiry I MIGHT have gotten at
least a Call Sheet for the 'Leno show' in question. Usually those
are (by common agreement) Non-Disclosure documents. I could have
then digitized that Call Sheet and sent it privately as 'evidence.'
I did not think that such was necessary in this case.

>The two Morse code operators, Chip Margelli, K7JA, and Ken Miller,
>K6CTW, have attested to this being an actual contest with an actual,
>previously unknown, message to send, which was sent both by Morse code,
>and by text messaging. And there's no disputing that fast Morse code
>would always beat an SMS text message of the same length.

I have corresponded with Mr. Margelli in his new position as
Director of Marketing for Heil Sound...about Heil products, not
about this alleged 'test' or 'contest' on the 'Leno show.' I have
NO complaints about Mr. Margelli's nor Mr. Miller's capabilities
with manual morse code communications. I only have complaints
about this entertainment gig being used as 'factual demonstration'
of any comparison of manual morse code versus any other mode.

I haven't used a Teletype Model 28 machine in many years...but I
could challenge ANY manual morse code operator pair to send either
clear text or enciphered (5-character groups) textual data as to
which method is 'faster' (TTY v. manual morse). I would not need
a recipient on-stage since another TTY terminal would repeat all
input sent by the transmitting terminal. The only problem there
is that it ALSO is a 'set-up' kind of 'test' (any touch-typist on
a TTY would 'win') and has very little entertainment value. The
latter item would cause its non-appearance on 'the Leno show.'
I am a touch typist who learned that in middle school on manual
typewriters with no legends on key tops. I am age 75 and still
retain the ability to continuously 'send' keyboard input at about
50 WPM with burst-input rates approximately 100 WPM.

>Two named witnesses would appear to trump one anonymous source.
>
>Therefore, your anonymous "reliable staffer" seems anything but.

I cannot argue your statements or 'baloney' comments in this
venue. My original source is now working for another show.
No more access to Tonight show records is possible. If you or
any other morse code mode champion say it was a 'real test,'
then it must be a real test.

As to the efficacy claim that manual morse code communications
beats cellular telephone textual-only (by keypad) communications,
I do not know of a single communications service or provider
that uses 'text' (via cellphone) for two-way communications. Of
what point was this entertainment venue 'test' actually proving?

>In 1960, while working in the Standards Lab of Ramo-Wooldridge Corp.
>in Canoga Park, CA,

Errrr, Len, the Ramo-Wooldridge Corporation went out of existence in 1958 when it merged with Thompson Products to become Thompson Ramo Wooldridge, Inc. Remember that I started with the "original" R-W in 1957 and was employed by them at the time of the merger at the former El Segundo Boulevard facilities (I never did get to work at the Arbor Vitae Street facilities which were the headquarters of the Air Force Ballistic Missile Division). They didn't move to Canoga Park until the late fall of 1959, and I was laid off (for the second time) in June of 1960. Thompson Ramo Wooldridge, Inc - later TRW, Inc. - went on an acquisitions binge and itself went out of existence in 2002 when the electronics and aerospace parts were acquired by Grumman (now Northrop Grumman) and the automotive parts mostly by Goodyear.

In context - RW was always friendly to ham radio, and the pre-merger RW Corp. actually let us scrounge both new and recycled parts for ham rigs and audio projects which became our property as long as we signed a register/release stating what we were building.

>I got to pull some OT on Saturdays to measure
>the difference between east coast transmissions of WWV and the
>local General Radio frequency standard. Just a plain old quartz
>crystal standard oscillator driving divider chains to the built-in
>clock.

While at the El Segundo Blvd. facility we had a project of measuring distance to a transmitter using the time delay of HF transmissions received at different sites with a calibrated link between them (azimuth was easy using standard DF techniques) and we used the GR frequency standard referenced above. Using WWV was too error-prone.

>I would record the microseconds of difference between local clock
>ticks and WWV ticks from the east coast. Not much variation in a
>week's time, don't remember just how much (it was 48 years ago).

My references about time differences, BTW, was to the time of day, i.e the time of the tick, not the interval between the ticks. GPS has a very noticeable offset compared to NIST.

I guess that it's only nuts like me that care about that. My early training as a broadcast studio engineer while I was in engineering school required timing of program starts and endings to the second. "Dead air" was not permitted. Three o'clock did not mean three

o'clock plus 1 second - the Western Union clock reset pulse on the hour was broadcast as a "beep".

>From my other hobby, "railroad accuracy" of watches (which are compared with a master clock at the start of a shift) requires one second per day, 30 seconds per month. Easy to do with quartz watches nowadays. There even used to be a SP Railroad dial-up number (now long gone) where the "time man" would announce the time "Southern Pacific Standard Time is ...." as contrasted to Ma Bell's "time lady" who would announce "Pacific Standard Time is ..."

Something must have changed (or been fixed) then - we made
measurements about three years ago and there was about six seconds
offset - an eternity for accurate time measurements. 340 nanoseconds
we can tolerate. Six seconds we can't.

Four such computers in a single box would be ideal for the way I run
my ham data-modes (packet/PACTOR/APRS/BPSK31 setup - 24/7 each). Too
bad we can't get that in a box the size of a toaster at a price that
is less than $100.

My secretary at March AFB (early 1960s) could and did type faster than
the Model 28 could cut tape. It frustrated her no end.

Yes, there were "licenses" to users but it was a one-way deal. My former FCC Bureau Chief went to the Reagan White House as the Assistant Chief of Staff for Administrative Services, which included overseeing the White House Communications Agency (staffed by the military, not the Secret Service which has its own comm net). He was given an ARPANET connection at home and WHCA mobile phone in his car. When Reagan left office and George Bush I put his own Chief of Staff - John Sununu - in place, my guy was replaced because of a personality conflict and his ARPANET connection and mobile phone were physically removed from his house and car with less than two hours notice.

Just about any piece of cheap junk from the last decade could handle
all three sources at once, though it would be pointless since the
ntp software would always choose the GPS source (unless it became
unavailable for some reason).

The 'box the size of a toaster' part is out, but could you settle for
4 old blade servers, 1U size each, in a rack mount? If so, find a
surplus property auction in your area (large state university,
government agency, etc.) and you will probably be able to pick up
something along those lines.

As does a GPS based time sytem.

Both WWVB and GPS require decoding of the time information by something.

GPS provides a better frequency standard that WWV.

It does not provide voice announcements or serve as a HF beacon though.

>we can tolerate. Six seconds we can't.

It's changed. GPS and UTC now differ by 14 seconds, according to
http://tycho.usno.navy.mil/gpstt.html. This is because GPS time does
not include leap seconds.

This 14 second difference is part of the GPS broadcast, so can easily
be backed out of the GPS time data to produce UTC. Once corrected,
the UTC values have the stated accuracy.

Don't be confused by the latency of some GPS units in producing time/fix
products. I've seen them produce fixes several seconds later. That's why
the time is included in postition data, so you know when you were there.
If you want time from your GPS, you need either the 1PPS pulse output or
a unit with a known and predictable period from real time to character
output. For many uses, simply assuming that the first character of the
output string (NMEA) occurs at the time in the message is adequate,
but that's not going to get you your 340ns accuracy.

For example, I am using a Trimble Acutime to feed an home-brew time
demon. Tests comparing system time from this demon to ntp stratum 1
servers gave a few millisecond difference. Good enough for me.

The only thing that has changed since the first sattelite launched is
that the accuracy degrading dither for civilian use was removed about
7 years ago. With the dither the time accuracy was in the range of tens
of microseconds.

Whereever you were getting your six seconds of error from, it wasn't
from the GPS system.

> the Model 28 could cut tape. It frustrated her no end.

My cohort at the old U.S. Embassy in Guinea-Bissau and I could jam one up as well. Nothing like poking tape on numerous multi-page outgoing cables five or six days per week to build typing speed and technique. The 28's were set up so that we never saw what we typed appear on paper. If you really wanted to check your work, you'd have to gather up the perf tape and look at it. Those machines were replaced just after I left Bissau in late 1987. I took the very last State Department 28 in Africa out of service in Sierra Leone in 1990. We had to destroy the innards, but a colleague wanted the cabinet. He re-worked the thing and turned it into a bar in his living room. His wife arrived at post a couple of months later and the new bar was quickly relegated to the fellow's ham shack.

During my early time at State, most places were using Teletype Model 40 equipment with the three 8" disk drives and the fastest, most rugged impact printer I'd ever seen. That stuff was gradually replaced by computer equipment in the 1987 to 1992 time frame.

I ran a Model 15 in Cincy and also had a Model 33 for a while. I wanted a 28 with the 3-speed gear shift badly. W8JIN offered me one long after I'd begun using a Commodore C-64. I gave it about thirty seconds thought before rejecting it as too big and heavy.

Len's point about touch typists winning a speed contest with Morse ops would depend entirely upon how fast the typist was. The second junior op I had in Bissau would have been lucky to do 30 wpm on a keyboard.

With the teletype model 40 stuff, there was not any typing of cables at all. Secretaries typed the cable and they were fed into an OCR. The operator might have to correct a formatting error or the occasional misread character. With the advent of the classified LAN's and the computerized equipment, drafters would electronically release cable text and addressees to the communications center and the ops would send the messages. Incoming traffic was routed in the same way, mostly automatically. Anything not understood by the computer would route to a 'spill que' to be manually assigned action and info offices.

Occasionally the Deputy Chief of Mission would telephone or e-mail a request that the action office for a given cable be changed.

By then, part of our work involved keeping message router databases (the military addressees--especially Navy--could change frequently) up to date. The computerization was supposed to result in the paperless office. It didn't. The stuff was just printed somewhere other than in the comm center.

Why does it matter? Morse Code can be machine-to-machine,
machine-to-human, human-to-machine, or human-to-human.

That's a big plus.

> > ◆ ◆The CW bands were those band segments that excluded voi
ce.

But they have included data modes like RTTY for more than 46
years. Every Hz of them.

You claimed:

"infrastructure that is being wasted on Morse includes"
band segments that have, until recently, been reserved
for its exclusive use."

Note the terms "is being wasted" and "until recently". But no such
band segments (except 2.5% of 6 and 2 meters) have existed for at
least 46 years.

Not only that, but modes besides FSK RTTY have been
common on the HF amateur bands since at least the early
1980s.

> Until fairly recently, there was no such thing as "data."

Please define "fairly recently". 10 years? 20 years? 46 years?

All of the non-voice parts of the bands have been open to
data modes for decades. That hams didn't use them much
30-40 years ago wasn't because of Morse Code.

> There was some RTTY,
> but it was never a major issue.

When?

> For many decades, the traffic in the HF
> ham bands was SSB voice or CW.

Hams began using SSB voice in the early 1930s. It
became more popular in the late 1940s and really
took off in the late 1950s-early 1960s.

But there was also AM voice, narrowband FM voice,
RTTY, SSTV, and even some FAX.

> A pie chart would show a very small slice
> labeled "other."

Perhaps, 30-40 years ago. Think about why that was.
It wasn't because of Morse Code.

> > > It will be interesting to
> > > see what the marketplace does to code tapes and code keys.

> > There are more keys on the market now than when I
> > became a ham 40 years ago.

> What about code tapes? How much longer will they last?

They've been largely replaced by Morse Code training
software, like G4FON's. No need to buy tapes anymore,
just download some free software and make your own. Or
download files to your MP3 player or iPod.

> My guess is
> that those keys are sold only to replace other keys.

My observation is that a considerable number are sold
to new hams who want to *use* Morse Code on the air.

Is that wrong? Should hams not learn, use or promote
Morse Code anymore?

> I doubt that there
> are very many first time key buyers today.

I know a couple. And since the usable life of a key is
measured in decades, the need for replacements is
pretty limited.

And consider this:

There are a considerable number of companies making
CW-only or CW-centric low-power HF amateur transceivers.
They are being sold in the tens of thousands.

For example, a new company called Elecraft appeared
in 1999 selling a CW-only QRP HF transceiver *kit* for
a bit under $600. To date, more then 6000 have been sold,
with minimal advertising. The company later produced
other CW-only transceiver kits, and they have sold well
with minimal advertising.

I know that Japan used that logic to get around the ITU-R treaty
requirement.

Do you know of *any* other country (besides Japan)
that had a nocodetest amateur radio license with HF privileges before
2003?

> > Would you have preferred that FCC violate the treaty?
> > Or create a

>
>I'm not going to spend a lot of time doing your research
> for you, but
> there was more then one treaty and those treaties expired or were
> modified over a period of years.

I have researched the subject. The treaty in question is
the ITU-R treaty, to which the USA is a signatory. That's
not just my opinion; it's what the FCC has repeatedly
written in its Report and Orders.

Before July 2003, in part S25.5, the ITU-R treaty required
that all amateur licenses which grant privileges below 30 MHz
had to have Morse Code tests.

That requirement was made optional at WRC 2003. Signatory
countries could retain Morse Code testing or eliminate it, as they
chose.

Some have chosen to reduce or eliminate it. Others have not.

> No-code HF licenses came about over
> time in a number of countries.

How many countries besides Japan had them before July 2003?

How many have them now?

> The US was either one of the last to drop
> code or was dead last to do so.

Japan still requires Morse Code for First Class licenses. Canadians
have the option of passing a Morse Code test or getting a higher
score on the written exam. Most of the countries in the former
Soviet Union still require Morse Code testing.

In any event, here in the USA:

- there has been a nocodetest amateur radio license for more than 17
years

- all classes of amateur license have been available for just a 5 wpm
test for 18 years with medical waiver, and for almost 8 years without
such a waiver.

- Morse Code testing has been completely gone for more than a year.

Yet US amateurs continue to use the mode extensively. Some use it
exclusively.

I've dealt with the WHCA folks on several occasions. The last was during the '97 Clinton-Yeltsin Helsinki Summit. It is plain why WHCA is staffed with military people: They don't get overtime. :-) Those I worked with were very dedicated and hardworking. The flurry of activity preceding a Presidential visit--for things like frequency clearances from the host government, the size of the PBX and number of lines for the visit hotel(s) and the number of cellular phones, is phenomenal. That Helsinki Summit was a double whammy in that it also involved a SECSTATE visit which meant that State's commo team was also on the ground with an entirely different set of communications requirements.

It was turned off about 7 years ago and even then just put the ultimate
accuracy in the low microsecond range.

GPS has never been off by six seconds.

It is a big issue in my comm room which is partially underground with concrete walls (what they call a "daylight basement" here) where neither WWVB nor GPS signals penetrate. I have not yet found an "atomic clock" (either digital or analog) that has an external antenna collection - they may exist but not at the consumer level. The consumer-grade clocks that I have sync well on the "upper" story but do not hold their accuracy for long.

And to add insult to injury, the analog wall clock that I use by intent has a face with the marine "silent period" and "auto alarm" markings, a configuration well known to shipboard radio operators. For a $20 quartz clock it keeps time remarkably well, considering that I have to manually adjust it at "DST" time changes anyhow.

Within the last two years I bought a set of keyer paddles to
complement the 60-year-old J-38 key that I refurbished. And I'm not a
"Valiant Morseman" (tm - Len Anderson) by any means.

"Out here" many of the teenagers who become new hams through one means
or another take the CW classes that our radio club gives if for no
other reason than it's a "thing" that many of their contemporaries who
use cellphones for calls and texting can't do. One-upsmanship still
lives.

He gave an example of Morse being used to encode transponder
identification, thus proving the continuing need for Morse. I countered
that transponder ID's are read by machines (the computers that drive
video displays), not by humans and, therefore, any machine language
would do. In fact, a REAL machine language would probably be better
suited to the task.
Please, let's not lose the context.

according to whom?

indeed I would say most of Ham use is Machine to human interestion
wether by watching my R/C aircraft fly (as well as to to send my
comands to it) as though I was on board or my interaction with the
fairly lifely packet system that survives in this where I interact
with with people but very often not in real time at all

or looking at what recent didx aprs staion I can see as a guide t
where I might be able to send a signal
frankly phil you seem to over looking a lot of ham radio

If you read the whole thing, you find there are several differences
betweeen the raw time and UTC.

> This 14 second difference is part of the GPS broadcast, so can easily
> be backed out of the GPS time data to produce UTC. Once corrected,
> the UTC values have the stated accuracy.

All the offsets from UTC and their values are in the NAV message. Most
receivers do that adjustment automaticaly as UTC is what most end users
want.

Now, if you have some receiver that outputs the raw uncorrected stuff
or a home brew receiver without the corrections...

That would be a case of RTFM.

> Don't be confused by the latency of some GPS units in producing time/fix

Most cheap receivers are either optimized for position or time, not
both, so it pays to read the spec sheet carefully.

> For example, I am using a Trimble Acutime to feed an home-brew time

That's one that has been optimized for time, so a good choice for your
application. A bit of attention to details could get you into the
microsecond range, but for the majority of people not necessary.

Steve,

I'll let you in on a secret: I think manufacturers put keyers in their rigs because every ham who has forgotten the code wants to think that he'll hook up an iambic key someday and win the CW SS.

Like the lottery, they're selling a dream: if the chip were omitted without telling anyone, I doubt 99% of hams would notice. ;-)

I missed that; what kind of transponders?

Certainly not aircraft transponders as they have no morse id.

Irrelevant to the issue.

In any case, there have been several articles in the HAM press on moding
surplus telco GPS time/frequency standands for HAM use.

The usual output is 10 MHz with a lot better performance than anything
a crystal can provide.

I'm afraid that the majority of today's hams simply don't care. But if you mentioned any one aspect of ham radio -- DX, contesting, public service -- you could say the same thing. The _majority_ of hams don't care.

I wonder if there is any one aspect of the hobby that the majority do care about. What's the single most popular activity in ham radio? Based on our local group, I'd have to say "drinking coffee with the gang."

> Like the lottery, they're selling a dream: if the chip were omitted

You mean put the jack on the back for the key, but don't connect it to anything? Yeah, I think you're probably right. Problem is, someone from that 1% would hook up a paddle, find that it didn't work, and inform the 99%. Then there would be an excuse to rant, and people who don't even own a paddle would be vociferously roasting the manufacturer.

:-) <-- Apply this smiley as necessary above if you take these comments too seriously.

That's what most radios do these days. Some with
less-than-perfect priorities: The internal keyer
of one particular YAECOMWOD flagship transceiver
I recently had the pleasure to operate generated
broken CW if the processor had other tasks, like
starting the internal fan, to do...

About the topic in general: The cost of adding a
keyer is negligible, and no serious manufacturer
will even consider to omit it from their radios.

It *is* a selling point, no matter if people use
it or not...

It is a interesting question, Steve. I suspect not. There are so many
different aspects and unfortunately some of them are at odds. If I had
to perform only one aspect of the hobby it would be homebrewing. But my
favorite activities are Homebrewing, PSK31, and contesting in that
order. Most everyone else would answer differently.

But to coin a phrase "Its all good!"

What's the single most popular activity in ham radio? Based
> on our local group, I'd have to say "drinking coffee with the gang."

Hehe, we've nicknamed our local repeater the "Food Repeater". It is
pretty busy, but we do spend a lot of time talking about where to get
together for breakfast, lunch, dinner, dessert, coffee, snacks..... well
you get the idea.

>> Like the lottery, they're selling a dream: if the chip were omitted

Minor quibble... Do you really think it is that high a number? Keeping
in mind that that roughly half of all hams are Technicians that probably
wouldn't be expected to know. But of General and above, I would think
that most would notice.

At any rate, it isn't that expensive or space hogging an addition, and it has uses beyond transmitting CW Morse - tuning and Morse practice.

The rigs are meant to be versatile, I mean I have USB capability on 40 meters and below, and LSB above that. There are other things that are likely used much less than a keyer.

On a related subject, There was a new Ham trying to sell a Icom IC-7000 (I Want, I Want!)on QRZ Because he said it didn't perform well and he was tired of it. Several other Hams tried to get him to say exactly what wasn't working with it, and it ended up that he just didn't understand how to work an HF radio. The thing with HF rigs is that they are definitely NOT plug and play. That's what I love about them, but new guys and gals coming from the HT world of repeaters need a lot of Elmering. And we should be doing it.

> schedule. I'm not certain how many contributed to the effort though.

That it is listed as "edited by Bill Orr" says the author list was
extensive.

Mine came from many sources. Of course the most recent 40 years I got
by being
an ARRL member.

If the transmitter final stage efficiency was 65%, those tubes were dissipating
about 250 watts each. Given that the 833A's maximum rated plate dissipation
is 400 watts and that at that level the anode color is warm orange-red, the
"dull red glow" was completely normal.

A pair of 572Bs is good for 320 watts plate dissipation, which is
about the same
as three 811As. In Class B GG they will do a kilowatt on CW and 1200
watts on SSB
(input, not output).
>

Twice as many dollars-per-watt.

Of course. What I'm saying is that Grampa and Gramma can often find
a place they like which is within a reasonable distance from where the
kids are.

> <garbled_segment>

Both extremes have their price. Highly mobile societies do not form
stable communities,
immobile ones fall victim to changes such as you are seeing.

> If you have a pile of money, any time is a good time. <garbled_segment> A lot of folks

> don't have a pile of money or their investments have taken a beating or
> their home has lost value or they are unable to sell it.

Agreed. But even in good times it can be a challenge. For example,
even if the house can be sold fast for a good price, if the retire-to
place
is also expensive there's no savings.

> People flock to states with no income tax or with no tax on pensions or
> government pensions. • A lot of those states are in the warm, sunny
> southland.

Yep. But over time those tax situations may change. As the population
age
mix changes, those states see increasing burdens on Medicare and other
services and less revenue because of all the exclusions. Sooner or
later,
something has to give.

> > OTOH things like health care costs, rising energy prices, etc.,

Look at the water shortage problem in Georgia. It really boils down to
having too many people in the wrong place.

> Look at the property. • Ask questions. • Get confirmation in writi
ng.
> Take along a portable receiver. • No place is a good amateur radio
> location if there's some noise source blotting out big pieces of the
> radio spectrum.

Agreed all around.

The big problem many folks face is lack of time. If a move is
100% voluntary, doing the research is easy, but when it's because
of a job relocation or such, there may not be time to wait for the
perfect place to come on the market.

When the local RE market was really hot, a couple of years ago, it
was not uncommon for a house to go on the market at noon and for
there to be multiple offers above the asking price before the sun went
down. Buyers had pre-approved mortgage papers in their back pockets
with the checkbook. Research CC&Rs? Line up a professional home
inspector? Make an offer with conditions? Forget about it, that house
is SOLD - to somebody else.

>
One way to prevent those heart attacks is to stay in shape with
exercise - like

splitting wood...

Back at the house on RadioTelegraph Hill, about 1982, there was a maple about
80 feet high which had few leaves one spring, so I called an arborist. Who said
"You better take that tree down before it falls down in a storm, it's sick and won't get well."

So I had the tree taken down and the wood cut into fireplace lengths. But that's when
I learned that "cut" and "split" meant different things: the wood was in fireplace lengths
but some parts were several feet in diameter. So I bought an axe and a couple of wedges
and learned to split wood by hand. I got pretty good, too.

It all went to the fireplace in that house.

> >>a 'setup' gig that employed two young local male actors as the
> >>(described) "text messaging experts"

No, it wasn't. They were not actors.

In the clip, the sending text messager is described by Jay Leno as
"the country's fastest text messager" and his name is given as
"Ben Cook". He says his record is sending a 160 character message
in 57 seconds. Those facts can be verified by watching the clip.

160 characters in 57 seconds at 5 characters per word works out to
approximately 33.68 wpm.

160 characters in 57 seconds at 6 characters per word (allowing for
spaces between words) works out to approximately 28.07 wpm.

The current Guinness Book of World Records for a 160 character
message is 41 seconds. That works out to about 46.83 and 39.02 wpm for
5 and 6 characters-per-word, respectively.

All are well below the world-record Morse Code speed, or the speed of
skilled Morse Code operators.

The 160 character message used in the text-message speed-record
attempts
is a standard message previously disclosed, so that all attempts use
the same
message. The Leno test used a message unknown to any of the
participants.

> >messaging:
>
> If you say so, then it is so.

No, it has been verified by several independent sources, including
people who
were actually there and part of the test.

> That 'recent demonstration' was over a year ago, was it not?

Yes - what difference does that make? The video clip can be
reviewed for confirmation.

> "The Tonight Show with Jay Leno" is an entertainment vehicle. It is
> not a documentary source of absolute facts.

Yet the facts are clear: Neither the text message sender nor the Morse
Code operators were actors, according to named people who were
actually there.

> >The two Morse code operators, Chip Margelli, K7JA, and Ken Miller,
> >K6CTW, have attested to this being an actual contest with an actual,

>
> I have corresponded with Mr. Margelli in his new position as
> Director of Marketing for Heil Sound...about Heil products, not
> about this alleged 'test' or 'contest' on the 'Leno show.'

Yet you use the word "alleged" and imply he is wrong when he says
the text-messager was not an actor.

> I have
> NO complaints about Mr. Margelli's nor Mr. Miller's capabilities
> with manual morse code communications.

OK so far.

>I only have complaints
> about this entertainment gig being used as 'factual demonstration'
> of any comparison of manual morse code versus any other mode.

Why? What are the complaints? What was not factual about the
demonstration?

Do you think that text messaging is faster than Morse Code done
by skilled operators?

The text-messaging sender has been identified as a record-holder
named Ben Cook. The record text-messge speed is below that
of skilled Morse Code operators, and the text-messager simply
lost the speed race. Not just on the show, but in rehearsals.

The two Morse Code operators, K7JA and K6CTW, have publicly and
privately said it was a real test. Are they not telling the truth?
Why should
anyone believe your account of an unnamed ex-staffperson, and not
believe
two identified people who were actual participants?

> >Two named witnesses would appear to trump one anonymous source.
>
> >Therefore, your anonymous "reliable staffer" seems anything but.
>
> I cannot argue your statements or 'baloney' comments in this
> venue.

Why not?

What's wrong with "this venue"?

> My original source is now working for another show.
> No more access to Tonight show records is possible. If you or
> any other morse code mode champion say it was a 'real test,'
> then it must be a real test.

What was wrong with the test? Given the evidence, why would any
reasonable person say it was not a real test?

> As to the efficacy claim that manual morse code communications
> beats cellular telephone textual-only (by keypad) communications,
> I do not know of a single communications service or provider
> that uses 'text' (via cellphone) for two-way communications.

Mine does.

When I receive a text message, the cellphone display shows "reply"
in the lower left corner. All I have to do is push the right button,
type
in my message, and push "send". The recipient can text me back, too.

That's two-way communications. I've had long conversations via text
messaging that way. It's slow but it works. Effective in noisy

environments
or when having a voice call is otherwise not the best choice.

Text messaging is a useful communications tool. So is Morse Code.
I use both.

> Of what point was this entertainment venue 'test' actually proving?

It showed that old methods aren't necessarily slower or less useful
than
newer ones.

In the first part of the clip, Jay Leno selects a young lady from the
audience,
talks to her a bit, and asks if she thinks Morse Code or text
messaging is
faster. The young lady says text messaging is faster. The audience
agrees.

Jay Leno then brings out the "country's fastest text messager" (not an
actor) and the two Morse Code operators, introduces them, and explains
the test.
The audience and the young lady are confident that the new technology
of text
messaging will be faster than the old Morse Code.

Yet when the test is actually run, Morse Code proves to be faster, and
produces
a hard-copy printout for verification. The world-record-holder could
not beat a couple
of amateurs going at a fraction of the Morse Code record speed.

Not only is the bit entertaining, it proves the point of newer not
always being faster.

What serious CW operator cannot send Morse faster than he/she
can text-message? I don't know of anyone including me. But
give me a full sized keyboard and the situation changes.

> Not only is the bit entertaining, it proves the point of newer not

I recently bought a high end HF rig and would not have considered it
if it had been the same rig with no keyer built in.
My code skills have been lost from years of not using them, but now
that I don't have to gain a certain word speed to "upgrade" I have a
paddle and will be starting CW again. Ashame that a hobby that is
suppose to promote experimentation and communication had blocked
of so many frequencies for "elitist" use.
********** Oh by the way straight from the
current ARRL QST April issue Page 12 "This Just In" "U.S. hams
who wish to operate with full privileges in European countries covered by
the
European Conference of Postal and Telecommunications Administrations
(CEPT) must now hold an Extra class licensee."**********
I was studying for my Extra, but if all it is to be, is another elitist" use
of
rules and reg's to validate the "high standing" of VEC's and 'higher ups'
then
maybe I should skip the Extra Class. I have heard OT's and many in the
Extra portions of the bands using as poor practices / illegal power / rude
and

foul language as in any other portions of the bands. If someone new or at
a
lower class licensee want so misbehave, restricting them to operate outside
Extra band plans will not create good manors and legal behavior. Didn't
anyone learn a thing from prohibition nearly a century ago. Same
philosophy.

Of course! But what cell phone has a full sized keyboard?

And if the Morse operators are allowed full sized Morse keyboards,
the situation changes yet again.

With a decent 10 speed bicycle I could win the Boston Marathon
(as long as everybody else has to run).

Neither do any of the traditional time and frequency stations without
a working antenna.

Your concern misses the whole point. It is a *privilege* to hold an extra
class licensee... especially if she's cute!

True, but my internet-connected computers don't need a working antenna,
they get their info from the ntp server :-)

I don't see the connection. btw, all US amateur licenses that required code tests were available for just a 5 wpm code test and a doctor's note since 1990 (18 years) and for just a 5 wpm code test since 2000 (8 years).

> Ashame that a hobby that is

What frequencies were those?

The only CW/data spectrum reserved for Extras is the bottom 25 kHz of 80, 40, 20 and 15 meters.

The change has nothing to do with the VECs. It is the result of CEPT's Radio Regulatory Working Group re-evaluating the equivalence between CEPT country license requirements and US license requirements.

IOW, the CEPT folks decided that having a General or Technician class license does not qualify the licensee to have full operating privileges in CEPT countries. Since Techs and Generals don't have full US operating privileges, why should they have full privs in CEPT countries?

That would be correct. Sometimes I/we forget that this is an
international group. Sorry about that.

Anyhow, the point is that there are a lot of Amateurs who might not be
expected to know that there is a Keyer or even a Key jack on an HF radio
because they wouldn't be expected to

The concept of reserving privileges by license class is not a bad one.
While some may argue that any sort of class distinctions are elitist,
there are many of us who believe in education and advancement.

While I would not want to mess with the license class band access as it
is now, I would not at all object to new license classes that were just
based on knowledge, and didn't confer any particular privileges.

Knowledge is way cool! 8^)

>
> Have you heard those goings-on from hams using non-voice modes?

I've heard a little - not much. But by and large, most people who use non-voice modes such as PSK31 and OOK Morse are going to be less likely to engage in shenanigans because the very nature of the modes slows things down a little, and the Op is more likely to give a little more thought about what they type or key.

And let's not forget that everyone out there can hear what goes on on SSB, so statistically things will get skewed a bit.

Amateur radio is largely a knowledge and skill based activity, and it has been for a long time. I look at the different classes as a way to work up to a high level of that knowledge and skill, rather than require the highest level at the start. Even the technician level license allows significant privileges, such as the ability to construct high power stations and experiment in a lot of different areas.

That Ops are encouraged to gain in skills and knowledge are a great thing IMO. The increased privileges are a nice enticement.

That was essentially the case in 1954 when the Extra
Class license didn't confer any particular frequency
privileges. With a lowly mail-order Conditional Class
license obtained by a lowly high school junior, I earned
access to all amateur radio frequencies. ex-WN5DXP

So given a typist of comparable proficiency to the Morse operators (
meaning probably in the region of 80 - 100 wpm) it is most likely that the
text message would win the race; depending on system delays, which again is
not a fair comparison to face to face Morse. You could wait for hours, or
days, or even years for the bands to open to a particular location!!

It all goes to show that you must compare like with like. I am sure that the
Morse operators would have also lost if they were forced to send extraneous
letters as they cycled through to find the correct one, as the text'er had
to.

Ultimately, we need to treat these various modes as methods of
sending text - no more and no less. Two methods that send the same text
are competing modes, regardless of whether keyboards, a telephone keypad
or a telegraph key is used to send it. A method that sends those blocks
of text faster and with fewer errors is better. A slower, more error
prone method is inferior. Not all encoding schemes are equal. Some, like
ASCII, encode the entire alphabet, including upper and lower case.
Others, like ISO-Latin-1, can encode even more characters. In general,
the more inclusive encoding method is better. An encoding scheme that is
easily adapted to error correction (parity, automatic re-send, etc.) is
also considered better. So claiming that phones, data modes and Morse
can't be compared because they are somehow "different" ignores the
ultimate reason for their existence - text communication via radio.

Respectfully I disagree. None of these methods compete with each other.
They are just different applications of technology, some simpler, some
more complex, and some quite strange (read feld-hell) Users can use
whatever mode they are interested in, and are on equal footing.

> A method that sends those blocks
> of text faster and with fewer errors is better. A slower, more error
> prone method is inferior.

Here is some difficulty when we try to apply your description to HF. It
is difficult to get a high data rate via HF due to the relatively noisy
conditions.

An example is Digital SSTV vs analog SSTV. On the face of it, digital
SSTV has it all over the old fashioned variety. No image size
restrictions, digital accuracy, and the jpeg you send looks the same on
the recipient's end. The problem is under certain conditions that exist
fairly often, the analog SSTV picture is sent, looked at and stored,
while the digital version never arrives, because noisy condx causr the
receiving end to send a continual stream of "Retry please".

NOw to apply this to text modes, this would make PSK31 inferior to
PSK64, 128. and so on. But the psk31 text reads about the same speed,

and takes up less bandwidth.

I disagree! Morse Code is more than simply a method of sending text.

> Two methods that send the same text
> are competing modes, regardless of whether keyboards, a telephone keypad
> or a telegraph key is used to send it.

I disagree again! Lots of differences, for example, a simple telegraph
key can be made in a few minutes with simple tools. Keyboards are a
bit more work.

> A method that sends those blocks
> of text faster and with fewer errors is better. A slower, more error
> prone method is inferior.

If the only factors considered are speed and accuracy, that's true.
But there are other
factors when it comes to things like amateur radio - bandwidth,
required equipment,
etc.

> Not all encoding schemes are equal. Some, like
> ASCII, encode the entire alphabet, including upper and lower case.
> Others, like ISO-Latin-1, can encode even more characters. In general,

See above about what factors are considered.

> So claiming that phones, data modes and Morse
> can't be compared because they are somehow "different" ignores the
> ultimate reason for their existence - text communication via radio.

One can compare all sorts of things, and have the results come out
differently
depending on the factors considered. Is rollerblading "better" than
running because
the same person can go faster and farther for the same effort?

The real point of the Jay Leno clip was to show that the assumption of
"newer is faster/better" turned out to be exactly wrong. The audience
and the woman Leno talked to were *sure* the text-messager would win,
yet Morse Code was faster.

If all you want to do is send text from point A to point B, there are lots of good modes.

But consider these factors:

1) Morse Code can be manually encoded and decoded by humans and machines. RTTY, ASCII, etc., cannot, at least in practical terms. (Yes, I once got to the point where I could usually recognize "RYRYRY" and "W3ABT" in 45.45 baud Baudot FSK, but have you ever met anyone who could have conversations that way?)

2) Morse Code can be done with audio or video - by watching a flashing light, text on a screen, or simply listening to it. Audio reception is a big advantage in situations where a visual display isn't practical.

3) Morse Code can be implemented with a bare minimum of simple equipment, or with complex equipment, or anything in between.

There are lots more, that's just a sample.

None of this proves the idea that all radio amateurs must use Morse Code, or must pass some sort of test on it, etc. That issue has been decided (at least in the USA).

Should radio amateurs not *use* Morse Code any more?

As I said in both a print interview and a TV interview during the
December storms here while passing gobs of hospital traffic using PTT
UHF FM ham radios when the electrical power, cellphones, internet
circuits , landlines, and even the sat-phone connections were all
down to the hospitals on the Oregon coast, we showed that 1950s
technology can get through when 1990s technology fails.

Indeed, compare it with "text communication via radio" not with sending
Morse across a table. Try the same test, but sending a message to ZL or VK,
I am sure that the SMS message would win. The text message would have
arrived long before the band opened and you tuned up your antenna.

I hope you'll pardon me when I ask "Which deity spoke to you and laid
down those particular points of Absolute Truth?". What's all this "We
need to" and "no more and no less" and "xxx is better" and "yyy is
inferior" and "... is also considered better"?

If you're willing to state those as _your_ personal opinions of the
basis on which two partially-competing methods of encoding and
communicating _should_ be compared (and that no other criteria need
apply), I have no objection at all.

I do, however, object in principle to the idea that these are the
highest (or only) criteria, or that they're somehow sacred.

And, I also object to the idea (which I think is implied by the tone
of your other messages - please correct me if I'm wrong) that the
choice of communication methods is somehow exclusive... that the fact
that a method which is superior (by your criteria, perhaps) means that
other methods that you find inferior should be wiped out or
abandoned... or that people who prefer to use the other methods are
somehow responsible for Holding Back The True Progress.

My own perspective is that people may have *many* criteria for chosing
a means of communication (by radio or otherwise). Bandwidth, or
bandwidth*reliability is not the sole criterion that people use, in
practice, nor do I think there's any reason that it should be. Life
is full of tradeoffs between different criteria - information
bandwidth per Hz of spectrum, robustness of encoding, suitability for
multi-point communication, resistance to different sorts of
interference, cost of equipment, availability of equipment, and so
forth. I communicate with my wife by voice, by email, by telephone,
by scribbling half-illegible notes on scraps of paper, and by bringing

home flowers... different methods, for different types of information-passing under varying conditions.

In commercial communications and public-safety, bandwidth (or payload) and reliability and cost all play a big factor. In military communications, reliability and security seem big, bandwidth is important, and cost (of equipment at least) tends to take a back seat.

Ham radio is a much more diverse motivation-space. Some people optimize their operations as for public safety and commercial (the EMCOM folks), others for "most distance per watt" or "per dollar spent on the radio" (QRP folks, homebrewers, and other experimenters), others for portability, others for plain ordinary fun (according to their own definition of fun... for some folks, using single-frequency crystal-oscillator transmitters is just what gets their rocks off :-)

There's plenty of room in ham radio for different modes of operation. Saying that we all *have* to abandon Morse (or SSB, or voice, or AM, or...) and strap computers to all of our rigs, in order to encourage experimentation and use with newer modes, is really missing the point... it's implicitly denying a large percentage of hams the right to explore those aspects of ham radio that *they* find interesting and worthwhile.

If we were all being paid to do all of this stuff, then the people paying us would perhaps have the right to set our agendas. We aren't (and by the rules of the game, cannot be... at least, not here in the US) and so we get to set our own priorities, operating-mode and otherwise.

[And, for the record - I operate CW only rarely, and have enjoyed experimenting with packet and the newer digital modes quite a bit.]

Not to mention other aspects not involving modes.
My favorite aspect of ham radio is pretty much mode
independent - experimenting with antennas.

But where's the fun and the challenge?

If I want to do business with someone in Australia, I'll pick up the telephone and avail myself of the investment of billions of dollars in research money and construction cost for a worldwide communications infrastructure. If my only objective in this case is to communicate with a specific individual in Australia, right now, reliably, that's the way to do it.

If I wait for a band opening and manage to snare some rare DX using only my modest radio equipment and my wits, that's a completely different goal. Comparing "communication" via ham radio and "communication" via sending a text message is a lot like comparing traveling over the ocean on a commercial airliner with doing it on your own sailboat. Yes, in both cases you are transported from point A to point B. But goals and priorities that determine "success" for these two endeavors are much different.

I'm bemused by where this discussion of the Leno "Morse vs. Texting" segment has gone. I have to give Leno's writers credit for coming up with something entertaining and unique. It even gave ham radio a bit of publicity. But a literal comparison of the two items misses the point of ham radio as a hobby and avocation.

That's not guaranteed at all.

> The text message would have
> arrived long before the band opened and you tuned up your antenna.

You're assuming the band isn't open and the antenna needs tuning. That changes the conditions of the test.

If the path from A to B is already set up and working, the Morse Code speed advantage may be even greater than it was on the Jay Leno show, because it only takes a fraction of a second for the direct radio signal to reach the Antipodes, but the text message will be relayed many times to go the same distance.

KB9X, in another post, makes a valid comparison between riding on a jet airliner and piloting your own sailboat. Are sailboats "obsolete" because they're slower?

The test made an interesting piece of tv, but nothing more than that. All it proved is that mobile phones have a slower and clumsier way of inputting text than a proficient cw operator.

Let's not forget that the texters have their own limitations, such as being in range of an antenna, hopefully no power outages or disasters that cut off the service.

But truly that wasn't the point of the demonstration anyhow. All other things being equal, texting is slower because of the physical aspect differences between the two.

Voice would have beaten either OOK Morse or texting. But who cares about that really? It's all good.

side trip....

I've alway thought that there are some interesting parallels between regular folks and Us Hams, with seemingly different impressions by the public.

humor alert!

Using an HT isn't cool, but Using a cell phone is.

Using OOK texting isn't cool, but using cell phone texting is.

My Suzuki Vitara with it's legal height Bugcatcher antenna isn't cool, but if I put a Penn State banner on it during football season I am waaaay kewl!

Humor alert off

I really need to post some pictures of the Vitara all set up. That 13+ foot antenna so completely overwhelms the thing that it almost becomes cool in it's own right. The only downside is that so many people want to come over to talk to me about it that I sometimes don't get to operate it as much. OTOH, I was talking to a Fish and Game officer who is going for his license now

==> ARRL EXPO REVVING UP FOR THE 2008 DAYTON HAMVENTION

ARRL EXPO Coordinator Katie Breen, W1KRB, tells that plans for the ARRL
EXPO <http://www.arrl.org/expo> at this year's Dayton Hamvention
<http://www.hamvention.org> are coming together nicely. "Our current
focus is on the new look and feel of our space. In past Hamventions,
Forum Room 5 was located adjacent to the ARRL space. It is now moving to
the Silver Arena, giving us more room and the opportunity to spread out
a bit and do more creative things inside the EXPO."
```

Breen said that the ARRL EXPO team is looking at expanding the Field Services area to accommodate more programs and activities, including a larger meet-and-greet area for members to visit with ARRL President Joel Harrison, W5ZN, as well as the many other League officials and staff who will be on hand to answer any questions.

"The Field Services area will boast a large interactive display devoted to Logbook of the World <http://www.arrl.org/lotw> for real time demonstrations, as well as a question-and-answer session with ARRL Web and Software Development Manager and LoTW developer Jon Bloom, KE3Z," Breen added.

Personnel from the ARRL DXCC Branch will be on hand to check DX cards and applications for all ARRL awards; JARL personnel will check cards and applications for JARL awards. All cards, including old cards, cards from deleted countries and cards for 160 meters, will be eligible for checking. Applications will be limited to 120 cards; more cards will be checked as time and volunteer Card Checkers are available. See the DXCC Web site <http://www.arrl.org/awards/dxcc> for the latest program information and current forms.

The ARRL Bookstore and Membership area will continue to buzz with activity, particularly with all of the new publications and products being offered this year. QST Editor Steve Ford, WB8IMY, will be on hand to sign your new copy of "ARRL's VHF Digital Handbook." QST Contributing Editor and author of the popular QST column "Hands-On Radio" H. Ward Silver, N0AX, will also be available to sign copies of his latest book, "ARRL's Hands-on Radio Experiments." The new desktop and pocket-sized versions of the "ARRL Repeater Directory" are sure to be a hit with their new handy indexing tabs on the cover, easier-to-read listings and "Key to Repeater Notes" located right up front.

Visit the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/tickets/tickets.html> to buy tickets at the discounted rate. Hotel rooms are filling up, so don't think twice -- if you've always wanted to attend Hamvention and have never had the chance, make this year your year to go. Hotels in the Dayton area can be found at the Dayton Montgomery County Convention and Visitors Bureau Web site <http://www.daytoncvb.com/accommodations/>. Keep updated with ARRL EXPO activities on the ARRL Web site <http://www.arrl.org/expo>.

==> W1AW TO CELEBRATE WORLD AMATEUR RADIO DAY AS NU1AW

Each year on the anniversary of its founding, April 18, the International Amateur Radio Union (IARU) marks World Amateur Radio Day <http://www.iaru.org/rel030418.html>. On this, the 83rd anniversary of its inaugural meeting in Paris, the IARU dedicates World Amateur Radio Day to the radio amateurs, educators and administrators who use Amateur Radio to support technology education in the classroom.

To call attention to the occasion in advance, ARRL staffers will be activating W1AW in the CQ WPX SSB Contest <http://www.cqwpx.com> this weekend (March 29-30) using the IARU club call sign NU1AW. By

celebrating the event, staffers hope to provide an opportunity for hams worldwide to put NU1AW in their logs, chase the WPX award <http://www.cq-amateur-radio.com/cqworldwidewpxawards.html> and learn about HF propagation as the world turns through day and night not once, but twice! Springtime propagation near the equinox is enhanced on the HF bands, even during the Solar Cycle minimum, so it's worth taking a listen even if the HF bands have been quiet lately.

This year's theme for World Amateur Radio Day is "Amateur Radio: A Foundation of Technical Knowledge." What better way to express the theme than by engaging in one of the largest international radiosporting events. ARRL Contest Branch Manager Sean Kutzko, KX9X, said, "If you haven't tried HF contesting or the WPX contest, the general format is to exchange a signal report (a simple '59' will do nicely) and a serial number (the number of the contact in the contest for you). The contest Web site spells out the way to compute your score, but the fun of this contest is to contact as many different prefixes as possible. For example, NU1AW counts as the NU1 prefix and KX9X counts as KX9. If you're new to HF, your prefix might be one sought after by those calling CQ! The WPX contest also features a 'Rookie' category for new radiosport folk, so be sure to send in your log as described by the rules -- it's easy!"

World Amateur Radio Day is also an opportunity for publicizing Amateur Radio to the interested public that may not be familiar with ham radio activities. Radiosport is an excellent way to introduce our service to teachers and students, as well. Competitive activities are an important focus for students to take the opportunity to ask questions about how signals get "from here to there" while watching hams make rapid-fire contacts around the world or even making a contact or two themselves, Kutzko said.

"NU1AW is not expected to be seriously competitive in the event," Kutzko explained, "but will make every attempt to be on the air as propagation warrants, so we hope to hear you marking the day and making World Amateur Radio Day a part of your springtime ham radio operation."

==> W1AW ENDOWMENT FUND DRIVE

It's an unimposing brick building, sitting on a small knoll in a residential area, yet not out of place. Accented with unique detail, the architecture of the building sets it back in time and apart from its surroundings. Round windows grace the end walls of the rectangular building and a formal entrance, reserved for special occasions, lies at the top of steps leading down to Main Street in Newington, Connecticut.

This simple and graceful building represents far more history and accomplishment than most passersby would imagine. Cross the threshold and you enter another world, one in which the magic of radio communication has spanned several generations. You can feel the spirit of Hiram Percy Maxim, whose "Old Betsy" rotary spark gap transmitter graces the vestibule. You can almost see HPM sitting at his desk in the

era of Amateur Radio when sparks flew and each contact was a rare event. And his spirit of adventure and experimentation -- and above all, service -- is still alive at W1AW, the Hiram Percy Maxim Memorial station.

The days and nights spent at W1AW by generations of ham radio operators have paved the way for all amateurs. They have left their mark and we are bound to continue the traditions that define our history. While we celebrate that history, W1AW embodies so much more. Through its round windows you can glimpse the future as well as the past.

Today, W1AW is a showcase for an Amateur Radio Service with capabilities that surpass what HPM, with one of the most imaginative minds of his generation, could have envisioned. A vintage AM station sits gracefully alongside D-STAR and other advanced digital technologies. A matrix of antenna connections and a wall of transceivers and amplifiers for nearly every band bring daily bulletins and Morse code practice to every corner of the country and the world. The guest operating suites showcase the most up-to-date equipment.

W1AW has come a long way since his Old Betsy ionized the air with every dit and dah from Hiram Percy Maxim's fist! He would be glad to see the station that W1AW has become. In recent years, since the ARRL launched the W1AW Endowment Fund, the station has been modernized without sacrificing its character and history. Income from the Endowment Fund has contributed to the replacement of aging equipment and antennas. New band pass filters, computers and cables have been installed.

The ARRL is continuing to build the permanent fund -- The W1AW Endowment Fund -- to cover W1AW annual operations and capital needs. The next steps to improve the station will be to upgrade software and continue to replace equipment that is at or near the end of its reliable service. In 2008, new transceivers and amplifiers in the three operating suites will be installed to enhance your experience when you visit and contact hams back home, or even when you work W1AW from your own shack.

ARRL Chief Executive Officer David Sumner, K1ZZ, said, "Your financial commitment in 2008 will help ARRL maintain W1AW as America's Amateur Radio station. Your generosity will send a strong message that you honor the history of W1AW and are committed to a bright future for W1AW as the heart of our service. ARRL will use your contribution to build a fund to ensure that the flagship station, W1AW, will continue to represent the best of all of us. If you haven't visited ARRL and W1AW recently, I hope you'll plan a trip to Newington and arrange to operate W1AW and see for yourself the magical role that W1AW plays for Amateur Radio."

If you you'd like to discuss your giving plans, please call the Development Office at 860-594-0397 or contact ARRL Development Director Mary Hobart, K1MMH, via e-mail <k1mmh@arrl.org>.

==> TWO NEW INSTRUCTORS JOIN THE TEACHERS INSTITUTE TEAM

The ARRL is pleased to announce the addition of two new instructors to the ARRL Teachers Institute staff this year. "For the first time this year, the ARRL Teachers Institute <http://www.arrl.org/FandES/tbp/ti.html> will offer 72 teachers the opportunity to explore and experience wireless technology basics, teaching of basic electronic concepts integral to micro controllers and robotics, bringing space technology into the classroom, radio astronomy basics, building a radio telescope, building and programming a robot and more," said ARRL Education Services Manager Debra Johnson, K1DMJ. "In past years, Mark Spencer, WA8SME, taught each course, but this year, he will have a little help." In past years, the ARRL Teachers Institute was limited to 48 teachers.

Miguel Enriquez, KD7RPP, was first licensed as a Novice in 1976 and learned about electronics by building a Heathkit; he upgraded to an Amateur Extra class license in 2002. Enriquez teaches mathematics, statistics and psychology at Pueblo High School in Tucson, Arizona, and has 10 years of experience teaching at the community college and university levels. In 2005, Enriquez established an Amateur Radio club at Pueblo High School. Through donations of equipment and support from individuals and ARRL, the club grew to 26 members and five licensed students exploring satellite communications, ATV, robotics, HF, EchoLink and weather satellite imagery.

Nathan McCray, K9CPO, is a sixth grade teacher at East Elementary School in Zion, Illinois where he has integrated Amateur Radio, electronics and robotics into the his science and math curriculum. McCray's knowledge areas include electronics, computer programming, communications, Amateur Radio, computer systems, leadership and teaching. His background includes instruction at the community college level, as well experience as a senior instructor at a US Navy technical school. McCray has been licensed for 24 years and holds an Amateur Extra class license.

Enriquez and McCray will each co-teach a Teachers Institute session this summer with lead instructor Mark Spencer WA8SME. They are expected to take on lead instruction responsibilities in 2009. Six Teachers Institute sessions will be offered in 2008: April 7-10, Tampa, Florida, Museum of Science & Industry; June 16-19, Rocklin, California, Parallax Facility; June 25-28, Tucson, Arizona, Pueblo Magnet High School; July 14-17, Dayton, Ohio, P&R Communications; July 28-31 and August 4-7, Newington, Connecticut, ARRL Headquarters.

==> FCC FINES COLORADO COMPANY FOR SELLING "NON-CERTIFIED CITIZENS BAND (CB) TRANSCEIVERS"

On Friday, March 21, the FCC released a "Forfeiture Order" <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-597A1.pdf> in the amount of $7000 to CB Shop and More in Loveland, Colorado for "willful and repeated violations of Section 302(b) of the Communications Act of 1934, as amended (Act), and Section 2.803(a)(1) of the Commission's Rules." According to the FCC, CB Shop and More was selling a "non-certified Citizens Band ('CB') transceiver." According to the Forfeiture Order, the CB Shop and More has been in the Commission's

sights since at least 2002.

Section 302(b) of the Act states: "No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section." Section 2.803(a)(1) reads that "Except as provided elsewhere in this section, no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless in the case of a device subject to certification such device has been authorized by the Commission."

On January 26, 2007, and March 8, 2007, the Denver Office received complaints alleging that CB Shop and More was selling non-certified CB transmitters and modified 10 meter band radios. On March 30, 2007, the Denver agents again visited CB Shop and More and noted that one of the CB transceivers offered for sale was a Galaxy Model DX99V and asked if they could purchase the transceiver. "The Denver agents subsequently identified themselves as FCC agents, and proceeded to interview the owner of the CB Shop. The owner acknowledged that he once received a Citation from the FCC, but he thought it was still legal for them to sell the referenced CB transceivers."

On August 28, 2007, the Denver Office issued a "Notice of Apparent Liability" (NAL) in the amount of $7000 to CB Shop and More. In the "NAL," the Denver Office found that CB Shop and More "apparently willfully and repeatedly violated Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules by offering for sale a non-certified CB transceiver." CB Shop and More filed a response on September 17, 2007 (Response). In its "Response," CB Shop argued that "Galaxy Model DX99V does not require certification by the Commission because it is not a CB transceiver." Consequently, CB Shop and More argued that the forfeiture should be cancelled.

According to the FCC, the proposed forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act, Section 1.80 of the Rules and "The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines." In examining CB Store and More's "Response," Section 503(b) of the Act requires that "the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require."

CB radio transceivers are subject to the equipment certification process and must be certified and properly labeled prior to being marketed or sold in the United States. Unlike CB radio transceivers, radio transmitting equipment that transmits solely on Amateur Radio Service frequencies is not subject to equipment authorization requirements prior to manufacture or marketing; however, some radio transmitters that transmit in a portion of the 10 meter band of the Amateur Radio Service

(28.000-29.700 MHz) are equipped with rotary, toggle or pushbutton switches mounted externally on the unit, allowing operation in the CB bands after completion of minor and trivial internal modifications to the equipment.

To address these radios, the Commission adopted changes to the CB-type acceptance requirements by defining a CB transmitter as "a transmitter that operates or is intended to operate at a station authorized in the CB." Section 95.655(a) of the Rules also states that "no transmitter will be certificated for use in the CB service if it is equipped with a frequency capability not listed in Section 95.625 of the Rules" (CB transmitter channel frequencies). Also, the Commission's Office of General Counsel released a letter on the importation and marketing of Amateur Radio transmitters, clarifying that transmitters that "have a built-in capacity to operate on CB frequencies and can easily be altered to activate that capacity, such as by moving or removing a jumper plug or cutting a single wire" fall within the definition of a CB transmitter under Section 95.603(c) of the Rules and therefore require certification prior to marketing or importation. The Commission's Office of Engineering and Technology "evaluated Galaxy Model DX99V here and determined that it could easily be altered for use as a CB transceiver."

The FCC examined CB Shop and More's Response to the NAL "pursuant to the statutory factors above," and in conjunction with the Forfeiture Policy Statement. As a result of the review, the Commission concluded that CB Shop and More "willfully and repeatedly violated Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules. Considering the entire record and the factors listed above, we find that neither reduction nor cancellation of the proposed $7,000 forfeiture is warranted." The Commission ordered that, pursuant to Section 503(b) of the Act and Sections 0.111, 0.311 and 1.80(f)(4) of the Commission's Rules, "CB Shop and More is liable for a monetary forfeiture in the amount of $7,000 for willfully and repeatedly violating Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules."

==> MERLE GLUNT, W3OKN (SK)

Merle Glunt, W3OKN, of Mount Union, Pennsylvania, passed away March 16. He was 90. Glunt served as the ARRL consultant for the World Administrative Radio Conference 1979 (WARC-79), and through years of hard work, was instrumental in gaining the 12, 17 and 30 meter bands for the Amateur Service.

During World War II, Glunt was the senior radio intercept analyst in the Radio Intelligence Division of the Federal Communications Commission, specializing in worldwide German espionage radio communications and Philippine guerrilla radio circuits. He served as the FCC Radio Intelligence Division (RID) liaison with the Office of Strategic Services (now the CIA) and the British Security Coordination. After the war, he was in charge of US Naval communications security surveillance and traffic analysis. He was a member on the US Navy task force charged with the creation of the Armed Force Security Agency (now the National

Security Agency).

Returning to the FCC during the Korean conflict, Glunt later held such positions as Chief of the Treaty Branch and Assistant Chief Engineer, responsible for the Frequency Allocation and Treaty Division and International and Operations Division. He was active in US preparation for various national and international telecommunications conferences, serving frequently as a US spokesman at NATO and the International Telecommunication Union (ITU), and international conferences in Canada, Great Britain, Spain and Brazil. As a consequence, Glunt served as a member of US delegations that were responsible for the development of international radio terms and definitions, the Maritime Mobile and Amateur Radio Services rules and regulations. Sponsored by the Agency for International Development (USAID), he organized and participated in a two-man team of experts, at the request of the prime minister of Thailand, to study and make recommendations to reorganize the Thailand Radio Communications Activity to facilitate communications in that area during the Korean conflict.

ARRL Chief Executive Officer David Sumner, K1ZZ, remembered Glunt "as a key figure in gaining allocations at 10, 18 and 24 MHz for the Amateur Service at the 1979 World Administrative Radio Conference (WARC-79). Anyone who ever operated on what we used to call the 'WARC bands' owes Merle a great debt. In 1973, as Assistant Chief Engineer of the FCC, Merle participated in a four-member study group that developed a report demonstrating the desirability of these amateur allocations. After retiring from the FCC, Merle became a consultant to the ARRL and was the most regular and most visible ARRL presence at dozens of Washington meetings during domestic preparations for WARC-79. He earned a position on the US delegation to the conference in Geneva specifically to represent the Amateur Services, and he did so with great skill and professionalism. It was my good fortune to have Merle as a mentor."

Richard L. Baldwin, W1RU, ARRL General Manager at the time of WARC-79, said, "Merle believed that there was no limit to what you could accomplish so long as you didn't worry about who got the credit for it and Merle lived that philosophy. As a member of the FCC staff, as a participant in many ITU meetings, as an advisor to ARRL and IARU, Merle was influential in organizing quiet and effective support for the Amateur Service. Those of us who worked with Merle know what a privilege it was to benefit from his expertise. Speaking personally, Merle was a good friend for many, many years and I shall miss him."

Glunt was a Life Member of the ARRL, the Quarter Century Wireless Association, the Radio Intelligence Division Association, the Old Old Timers Club, the Society of Wireless Pioneers and the Veterans Wireless Operators Association. Also active in the National Traffic System, he was also a member of the FISTS CW Club, the Association of Former Intelligence Officers, the US Naval Cryptologic Veterans Association and the US Naval Institute.

A funeral service was held March 21. Memorial contributions in remembrance of Merle Glunt may be given to the Home Nursing Agency, 900 Bryan St, Huntingdon, PA 16652 or to the American Cancer Society, 10955 Raystown Rd, Ste B, Huntingdon, PA 16652.

==> ARRL PRESIDENT APPOINTED TO ARKANSAS STATE BOARD

Arkansas Governor Mike Beebe has appointed ARRL President Joel Harrison, W5ZN, to a four year term on the Board of Directors of the Arkansas Science & Technology Authority <http://www.asta.arkansas.gov/index.html>. Harrison's appointment was approved by the Arkansas Senate. "It's an honor to be appointed by Governor Beebe to serve the people of Arkansas in this area that recognizes not only my professional accomplishments, but those related to Amateur Radio as well," Harrison said. The Arkansas Science & Technology Authority was created by statute in 1983 with the mission to bring the benefits of science and advanced technology to the people and state of Arkansas. This mission is addressed by strategies to promote scientific research, technology development, business innovation, and math, science and engineering education.

==>SOLAR UPDATE

Tad "How the March Sun feels like May!" Cook, K7RA, this week reports: It is exciting to see heightened solar activity one week into spring. Currently, three sunspots are visible: 987, 988 and 989. The consensus says that all seem to be old Solar Cycle 23 spots. But with the three sunspot groups so close to the Sun's equator, it is hard to tell for certain. We know that Cycle 24 spots should have magnetic polarity opposing the magnetic signature of Cycle 23 sunspots, but this is also true for sunspots below the equator relative to sunspots above. Average sunspot numbers for the reporting week (Thursday through Wednesday) rose more than 18 points from the previous week, to 23.4. The average daily solar flux was up nearly six points to 75.4. The average geomagnetic indicators were unchanged, but this is because they fell from the start of last week and rose this week. Sunspot numbers for March 20 through 26 were 0, 0, 0, 14, 35, 52 and 63 with a mean of 23.4. The 10.7 cm flux was 68.4, 68.2, 69.6, 72, 79.4, 88.6, and 81.6 with a mean of 75.4. Estimated planetary A indices were 8, 5, 5, 8, 4, 4 and 27 with a mean of 8.7. Estimated mid-latitude A indices were 7, 4, 4, 7, 2, 3 and 16 with a mean of 6.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you courtesy of Robert Browning.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, another running of the NCCC Sprint is on March 28. The CQ WW WPX Contest (SSB) is March 29-30. Next

weekend, look for the YLRL DX-YL to NA-YL Contest (CW) on April 4-6. The SP DX Contest, the EA RTTY Contest, the QCWA Spring QSO Party, the Missouri QSO Party and the Yuri Gagarin International DX Contest are all on April 5-6. The RSGB RoPoCo 1 is April 6, the RSGB 80 Meter Club Championship (CW) is April 7, the ARS Spartan Sprint is April 8 and the NAQCC Straight Key/Bug Sprint is April 9. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 6, 2008, for these online course sessions beginning on Friday, April 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* "Hints and Kinks": Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint, you will receive $20. Send your hints via e-mail to <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address. Items in "Hints and Kinks" have not been tested by QST or ARRL unless otherwise stated. Although we can't guarantee that hints published will work for every situation, QST makes every effort to screen for harmful information.

* Communications Academy Set for April: The 10th Annual Communications Academy will be April 5-6 at South Seattle Community College. Communications Academy is a non-profit coalition of volunteer communications teams put together to provide a high quality, professional-grade training opportunity for the various emergency

communications teams around the Pacific Northwest. By providing a once-a-year large-scale venue for training, volunteer communicators are exposed to topics in emergency management, communications techniques and protocols, real-life emergency responses, and other pertinent subjects, that might not otherwise be available to them. The Communications Academy is open to anyone with an interest in emergency communications, volunteer or professional. The presentations are designed to promote the development of knowledgeable, skilled emergency communicators who will support their local communities during a disaster or emergency response. There will be two keynote speakers on Saturday: King County Emergency Management Coordinator Rich Tokarzewski, and Charles Simonyi, KE7KDP, astronaut on the International Space Station. The Sunday 2008 keynote speaker is ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. Registration for both days is $50; if participants can only attend one day, the fee is reduced to $30. All fees include lunch. For more information, please visit the Communications Academy Web site <http://www.commacademy.org/2008/index.php>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the following operations have been approved for DXCC credit: the 2008 VP6DX DXpedition to Ducie Island; the 2008 TX5C DXpedition to Clipperton Island, and the 2007 S05A operation to Western Sahara have been approved for DXCC credit. If you have any questions about these operations, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org>.

* Corrections and Clarifications: Last week, we reported that Emmett Freitas, AE6Z (ex-W6OIA) (SK), participated in the first-ever VE testing session. Freitas participated in the first-ever ARRL VE testing session.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1598 - March 28, 2008

Amateur Radio Newsline report number 1598 with a release date of Friday, March 28tht, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Washington state invites it ham radio community to join the Amber Alert system, a ham radio satellite gets a workout in a rescue radio drill, CQ Magazine says Kosovo is an awards country and Pierre

is here with a look at the future of hand held wireless communications. Find out the details on Amateur Radio Newsline(tm) report number 1598 coming your way right now.

RESCUE RADIO: WASHINGTON STATE INVITES HAMS TO JOIN AMBER ALERT SYSTEM

Hams in Washington state are officially invited to join that states Amber Alert public notification system. Burt Hicks, WB6MQV, reports:

--

According to a news report aired on Spokane television station KHQ, there are some 27,000 licensed radio Amateurs in Washington to whom the states Emergency Management System and State Patrol have jointly invited to take part in the Washington's Amber Alert program.

Representing the local Spokane ham community on the KHQ newscast was Jack Tiley, AD7FO. Tiley is the Spokane County ARES and RACES Assistant Emergency Coordinator. He indicated that the advantage ham radio it that it has people on the roads with two way radios in their vehicles. If they

are aware of an Amber Alert, and then spot the fugitive car with a kidnap victim, that they can quickly call in the information to authorities. He also noted that hams have communications into areas of Spokane where cellphones simply do not work.

Washington State Trooper Jeff Seventhy appeared by telephone in the KHQ report. He said that the addition of the ham radio community to the program is truly welcome. He said that the main goal is to find kids who are missing as quickly as possible and that the more people out there helping, the better.

No mention was made as to whether any of the states ham radio repeaters plan to install decoders to permit direct relay of Amber Alert messages. Some hams in other states do not think doing so is legal, others

do but nobody has ever petitioned the FCC to get a definitive ruling. You

can see the entire KHQ report at http://tinyurl.com/28tpjc

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

For those not aware, the nations Amber Alert System is named in honor of Amber Hagerman of Arlington, Texas. She was only 9 years old when she

was abducted on January 13, 1996. Four days later her body was found in a drainage ditch four miles from her home. Her kidnapping and murder still remain unsolved. (KMQ-TV)

**

RESCUE RADIO: HAMSAT USED IN HOSPITAL DRILL

Ham radio in space became rescue radio in space. This, when Shands hospital in Gainesville, Florida conducted a simulated emergency communications drill on Wednesday, March 12.

Students and faculty with the Gator Amateur Radio Club at the University of

Florida participated. The University of Florida Dental School club station, W4DFU, used their satellite ground station to distribute an e-mail

test message though the GO-32 amateur radio satellite. This provided proof

of concept in a disaster scenario to augment Amateur Radio voice communication if all telephone and internet services were down.

Keeping patient privacy laws in mind the ham radio operators could not transmit sensitive personal or health related data. However, in support of

the larger disaster scenario the ham radio satellite e-mail concept could be useful for getting list of supplies, reporting hazardous situations, and

status reports.

**

HAM RADIO IN SPACE: CUBESAT PROPOSES D-STAR OPERATIONS ONLY

D-Star may soon be heading into space. This as a new European Amateur Radio CubeSat project is proposing to using the D-STAR digital-communication protocol for all aspects of its operations.

Called OUFTI-1, the bird will be built by students at the University of Liege in Belgium. Its purpose is to provide hands-on experience to students in the design, construction, and control of complete satellite systems. One that will ultimately serve as the basis for a variety of

space experiments.

The most innovative feature of OUFTI-1 will be the use of the Japan Amateur Radio League-developed D-Star digital-communication protocol. D-Star would be used as a means of satellite control and telemetry, as well as for relay communications for hams operators worldwide.

Future plans call for D-Star to be used to command on-orbit experiments as well. More on this exciting development is on-line at http://www.leodium.ulg.ac.be/cmsms/ (OUFTI-1 release)

**

RESCUE RADIO: HAMS RESPOND TO GEORGIA TORNADOES

Meantime, ham radio was on scene when tornadoes swept through Georgia on Friday, March 14th. At 9:38 PM Eastern time an F-2 tornado touched down in downtown Atlanta. The National Weather Service said the twister was 6 miles long and 200 yards wide. An F-2 tornado has wind speeds from 111 to 135 miles per hour and the ability to tear roofs off houses, completely destroy mobile homes and snap apart tress as if they were toothpicks.

And as seen in T-V coverage the damage was extensive. Eyewitness accounts said that huge hunks of metal and broken glass were everywhere in Atlanta and that the Olympic Centennial Park was a mess. The high winds caused major damage to several other landmarks including the Georgia World Congress Center. Grady Memorial Hospital, the major trauma center for the Atlanta metro area, had its 100 foot tall communications tower blown off the hospital roof, disabling communications with emergency medical personnel.

According to the ARRL Letter, soon after the twister hit, hams sprang into action. According to ARRL Georgia Section Manager Susan Swiderski, AF4FO, William Chandler, KG4JTK, went from house to house in the wind and the rain checking for any injuries in the homes that had sustained damage by falling trees and debris. At the same time, he issued reports via radio to Barry Kanne, W4TGA, the Emergency Coordinator for neighboring DeKalb County regarding fallen trees, billboards, power lines and other threats to public safety. Kanne relayed this information to the Atlanta 911 center and to the Grady Hospital Emergency Operations Center.

In Effingham County, near Savannah on Georgia's coastline a tornado took down six power towers during the annual St Patrick's Day celebrations, and thrusting the community into total blackout conditions. A local 2 meter SKYWARN net, with Greg Tillman, N4VAD, serving as net control, provided a vital link for the staff at Memorial University Medical Center in Savannah.

And there has already been words of praise for the volunteer work performed

by Georgia's ham radio community. Dr Ra Meguiar, N4RVM, a physician and senior hospital administrator, sent a letter of appreciation in recognition. He thanked the local hams for staying with us through the weather and the power outage. (ARRL, others)

**

RESCUE RADIO: PHILADELPHIA NWS TO OFFER SKYWARN TRAINING

If you live in and around Philadelphia Pennsylvania or Southern New Jersey

and want to become a SKYWARN trained operator, listen up. The National Weather Service, in conjunction with the Skywarn Program of the Camden County Office of Emergency Management, will conduct the Basic Skywarn training program on Wednesday, April 9th. The venue is the Camden County Boathouse in Pennsauken with the class beginning at 7:00 pm Eastern time. To reserve a pace please pre register by calling 1-866-CAMDEN COUNTY. That's 1-866-226-3362. More information on the overall SKYWARN

program is on-line at www.nws.noaa.gov/skywarn/ (N2PHI via QRZ.com)

**

WITH NEWSLINE: SPEAKERS NEEDED FOR HAM RADIO TOWN MEETING

If you are planning to attend the 2008 Dayton Hamvention and would like to

be a speaker at one of the major sessions, then listen up. Have we got a deal for you.

Each year, we at the Amateur Radio Newsline host an open discussion forum called the Ham Radio Town Meeting. Its where we take a topic of interest,

bring in some experts and then open it up for discussion with the live studio audience. In years past we have covered such controversial topics as no code licensing, and the digitalization of ham radio to mention only a

few. But this year, we have decided to make it a truly fun two hours by taking a trip back in time to what some might call a kinder and gentler ham

radio.

This years topic is titled "Grandpa's Ham Radio - The Magic of Yesteryear." It will take a look back at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1980's. We have already assembled some top names in ham radio whose career go back into the latter half of the 20th century, but we still have

a few spots open that need to be filled. First we need someone who remembers what it was like to take a Novice or Technician test by mail and

then face the local FCC office to upgrade to General or higher. We also need someone who can talkk on the old days of emergency communications before the advent of F-M and repeaters. Last but by no means least, we are

looking for a female ham who was first licensed as a teen or pre-teen in the early 1960's who can talk about what it was like to be one of the few gals in what was then a make dominated hobby.

If you are planning to be at Hamvention 2008, and would like to have a bit

of fun talking for about 10 minutes on any of these topics, please send us

an e-mail to newsline@arnewsline.org with the name of the topic, your contact information including a phone number and a short bio. We will get

back to you very quickly.

Again that e-mail address is newsline@arnewsline.org And whether you are a

participant or an audience member we hope to see you at the Ham Radio Town

Meting at Hamvention 2008. (ARNewsline(tm))

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W1JLI Memorial repeater serving Norwood, Massachusetts.

(5 sec pause here)

**

RADIO AWARDS: CQ TO ACCEPT KOSOVO FOR ITS AWARDS PROGRAMS

CQ says that Kosovo is a country and effective immediately it is being added to the list of countries and territories recognized for CQ DX awards. Amateur Radio Newsline's Don Carlson, KQ6FM, has more:

--

Kosovo's status has been the subject of some controversy in the amateur radio community as well as the world community. Ham radio wise, the ARRL recently declared that the special operations from there on February 17 will count as Serbia, not Kosovo, in terms of DXCC credit. The League says

it is waiting for Kosovo to become a member state of the United Nations or

be issued a callsign block by the International Telecommunications Union before taking any action to recognize it as a separate DXCC entity.

While CQ the magazine's editor says that because it is their policy to grant credit for contacts with 'new' entities as of the date that their status changes, it has decided not to wait for U.N. action. Instead it will follow the lead of the United States and other countries that have recognized Kosovo's independence. Therefore it will grant credit for contacts made with stations in Kosovo as of its independence day. That date was February 17, 2008. Its also good news for those radio amateurs who have made contact with stations in Kosovo and are anxious to have it

recognized as a new nation by all.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

In a related development, on March 26th it was announced that the Worked All Europe award committee of the Deutsche Amateur Radio Club had voted to

add Kosovo to the W-A-E country list. The CQ World Wide DX Contests and the CQ DX Marathon both use a combination of the DXCC and WAE lists as the

basis for their country lists. Therefore, Kosovo will now be considered a separate entity for both the CQ DX Marathon held this past February 17th and for the upcoming CQ World Wide DX Contests, beginning with the RTTY DX

Contest this coming September 27th and 28th. (CQ)

**

BREAKING DX NEWS: ZS6GCM ON HIS WAY TO MARION ISLAND

Some breaking news from the world of D0X. Petrus Kritzinger, ZS6GCM says that he will be active from Marion Island within the next month or so. Definitely by mid-May.

Hardly having touched soil in South Africa after his trip to Bouvet, Kritzinger is already on his way to Marion and will be operating as ZS8T. ZS6GCM says that he will be active on 160, 80, 40, 30, 20, 17, 12 and 10 meters using SSB, CW and RTTY. He expects to start operation in May

2008 depending on his work load on the island.

Further information on Krizinger's D-X exploits is on-line at www.sarl.org.za. We will have more D-X news at the end of this weeks newscast. (OPDX)

**

ENFORCEMENT: FCC PROPOES $7000 FINE FOR NON CERTIFIED CB GEAR

The FCC has proposed a $7000 fine against CB Shop & More, LLLP of Loveland,

Colorado. This for willful and repeated violations of of the Communications Act and the Commission's Rules by offering for sale non certified transceivers capable of operation in the 11 meter Citizens Radio

service.

The story is an all to familiar one. A retailer caught by the FCC selling

what it claims to be 10 meter ham radio gear but which the FCC says is easy

to make work on 11 meters. In this case it was transceivers carrying the Connex and Galaxy brand name labels.

CB Shop was specifically cited on a Galaxy transceiver. The FCC says that

the unit is really C-B sets disguised as ham gear in order to skirt their rules. CB Shop argues that the gear at issue and does not require Commission approval because it is not a CB transceiver. The company has hired a lawyer who already responded to the FCC's initial notice in this case. Chances are that this one could eventually wind up being adjudicated

in the federal courts. (FCC)

**

RADIO LAW: MOTOROLA KOREA FINED FOR FAIR TRADE VIOLATIONS

The subsidiary of one of the worlds largest telecommunications equipment providers has some legal issues overseas. Fred Vobbe, W8 HDU,

has the details:

--

South Korea's Fair Trade Commission has levied a fine of 696 million won, or $729,000, on Motorola Korea Inc.. This, for allegedly helping three South Korean companies collude to get orders from government agencies.

Leenos Corp. and two other South Korean companies were fined a combined 282

million won or $295,000 for their part in conspiring to coordinate their bidding prices for the supply of mobile telecommunications devices to state

police agencies, the antitrust agency said in a statement.

The three companies worked as sales agents for Motorola's trunked radio system, sold in the South Korean market. Motorola Korea, the South Korean unit of U.S. electronics manufacturer Motorola Inc. as might be expected, it criticized the Fair Trade Commission ruling.

--

No word whether any of the companies involved plan to appeal. (BN)

**

RADIO LAW: FCC SAYS NO APPARTMENT HOUSE CABLE EXCLUSIVITY

A divided panel of the U.S. Court of Appeals for the D.C. Circuit has refused to bar the Federal Communications Commission from enforcing rules that abolish exclusive contracts between cable companies and apartment building owners.

The request for stay, rejected in a February 28th order, was sought by the

National Cable and Telecommunications Association. The N-C-T-A wanted a stay pending appeal insofar as the FCC's rules voided existing contracts to

serve multiple dwelling units. Without issuing an opinion, the panel voted

2-1 to deny NCTA's request, stating that the trade group failed to satisfy

the stringent standards governing requests for such relief. (BD)

**

EMERGING TECHNOLOGY: THE DTV TRANSITION - AN UPDATE

In less than a year most of the nations analog television transmitters will

fall silent by government decree. And, if you want to keep watching your favorite shows, and are not subscribed to either cable or satellite, you will need a set top converter. Up till now these units have been scarcer than hens teeth and almost so expensive that you might think they were made

of gold. But that too is changing as Uncle Sam puts your tax money where his mouth is to subsidize the purchase of these units. Jack Parker, W8ISH,

is in Indianapolis, with more:

--

Come February 2009 your analog TV may be useless. On that day TV stations

across America will turn off their analog transmitters and broadcast only in digital. Viewers who get their television over the air from a roof mounted antenna or rabbit ears will turn on their sets and see nothing but

snow. That is, unless you have received a government issued coupon or bought a converter box on your own.

Each home may get two forty-dollar coupons to purchase an analog to digital converter box giving your old TV set a new lease on life. Most big

box electronic stores now carry the converter box as well as new High Definition TV's. As of Christmas 2007, most stores no longer carry analog

TV's.

While the move to high def will make your sitcoms look better and sound better, the Environmental Protection Agency has cause for concern. Discarded analog TV's contain about five pounds of lead. They

fear that could cause widespread contamination of America's landfills.

So, if you have a cable TV or satellite TV converter box then you are already ahead of the game. Like old ham radios, you can sit back and enjoy what you have while the broadcast television industry gets ready for

its February 2009 analog to digital transition.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

So what now? Well if you watch TV with an antenna on your roof or rabbit ears on your set, now is the time to get you set top converter boxes coupons. The coupons will became available this past January 1, 2008 and you can get them through March 31, 2009. All households that own a TV using

over-the-air analog reception are eligible. A link to the needed application is on line at www.dtv.gov (W8ISH from FCC information)

NAMES IN THE NEWS: VO1VZ NEW LABRADOR SM

Some names in the news. First up is Charles Marsh, VO1VZ, who has been elected Radio Amateurs of Canada Section Manager for Newfoundland and Labrador. Marsh ran unopposed, thereby eliminating the need for a balloted

election. He begins a two-year term on July 1, 2008. (RAC)

**

RADIO HAPPENINGS: WHAT GOES UP MAY NOT STAY UP
The saga of the KFI AM radio tower rebuild in Los Angeles continues. This

after the installation of the stations new antenna structure grinds to a halt as the structure crumbles to the ground.
The story goes this way. Back on December 19, 2004 the main tower for KFI

A-M on 640 kHz, was hit by a private plane. The entire tower came crashing to the ground, folding into pieces but for the most part missing

the buildings around the tower base. About 2 weeks ago, construction of the

replacement tower finally got underway. But on Tuesday, March 18th, as the

new tower had almost reached the 300 foot mark when it suddenly collapsed. According to eye witness Dino Darling, K6RIX, afternoon around 2:00PM. Darling says that two levels of guy wires were in place. The third

set of guys were slowly being brought into place, when the failure occurred.

Thankfully, nobody was on the tower during this phase of the installation.

Only one person was hurt when the North East guy structure gave way. There

was some minor damage to a couple of trailers and the top 8' of the gin pole came through a warehouse roof.

Darling says that the third level guys were slacked at the time of the failure. Right now it looks as if the KFI tower installation is kind of back to square one. (K6RIX)

CHANGING OF THE GUARD: RETIRED NEWSMAN ROBERT DYK, NW1A, SK

The changing of the guards in Amateur Radio continues. This with word that former ABC network correspondent and longtime Maine broadcaster Robert

Dyk, NW1A, died of cancer at his Falmouth home on March 22nd.

Dyk, who had a background in radio and television, was an anchor and reporter for WMTW from 1987 to 2004. He began his professional career as a

page at CBS television in Los Angeles and transferred to CBS News as an editorial assistant during the network's coverage of the 1960 Democratic

convention, working with broadcast luminaries such as Edward R. Murrow, Walter Cronkite and Don Hewitt.

Among the highlights of his career was being the only American network correspondent on the scene in Tehran in 1979 for the first four days of the

Iranian hostage crisis, when radical students stormed the U.S. embassy in support of Iran's revolution and held 52 Americans hostage for 444 days.

He came out of retirement last year to work as a part-time anchor-reporter

for WGAN and was working as recently as last month. Robert Dyk, NW1A, was 71. (KT1B)

**

THE CHANGING OF THE GUARD: NEWSLINE REPORTER MICHAEL CORBIN, K0ACL - S.K.

And we are very sad to report the passing of one of the newest members of the Newsline family. Michael Corbin K0ACL, who had done reports for Newsline died of complications following a stroke on Wednesday, March 19th,

Michael Corbin, lived in Denver, Colorado, and was host of the nationally-syndicated talk radio program called A Closer Look.. He had become a member of the ham radio community in March of 2006. He had only joined the Amateur Radio Newline team earlier this year after volunteering

to cover ham radio happenings in the United States Mountain time zone area.

According to one report Michael suffered a massive stroke and was found in

his car at the side of a Denver road by a passer-by on Tuesday March 18th. He passed away the following day. Michael Corbin, K0ACL, was only age 52. (WY0X)

**

HAM RADIO FROM SPACE: SOLAR ACTIVITY IS SURGING

Spaceweather dot com says that solar activity is surging. Three large sunspots have materialized and at least one of them holds the promise of energy for strong solar flares.

An M2-class eruption on March 25th hurled a coronal mass ejection or C-M-E

into space and emitted radio bursts audible in shortwave receivers on Earth.

Translated into information useful to ham radio operators this all means you can expect some interesting propagation or lack of propagation depending on the bands you frequent and the amount of solar activity that actually develops in the coming days. (Spaceweather)

**

EMERGING TECHNOLOGY: GIVE THE CUSTOMER A NEW TV SET

Sometimes even big business takes the easy way out. Witness the recent incident where it appears as if UK telecommunications giant British Telecom bought a customer a new TV set. Because of interference. No, not

interference to the customers television reception. Rather because of the

amount of interference to operations that the old one was causing to broadband users. It seems that a faulty power supply in the old television

receiver was disrupting broadband services for a 200 meter radius. (MM0KGB)

**

WORLDBEAT - AFRICA: NEW FOUR BEACON ON 70 MHZ FROM GUNIA BISSAU

The SV2DCD blog carries a report that J5FOUR is a new 70 MHz 4 meter beacon

is now operational from Guinea-Bissau. According to CT1FFU, the J5FOUR beacon came to life on March 10th using 20 watts out to a 4 element yagi designed by YU7EF specifically for this project. The antenna is beaming 20 ï¿½
to cover all Europe.

Formerly the Portuguese colony of Portuguese Guinea, Gunia Bissau is one of

the smallest nations in continental Africa. It is bordered by Senegal to the north, Guinea to the south and east, with the Atlantic Ocean to its west.

And its not at all surprising to hear that a new 70 MHz beacon has taken to

the air from Gunia Bissau. Interest in 4 meters seems to be spreading with

a growing world-wide with the number of countries granting their Amateurs some form of access to 70 MHz increasing every month. (Southgate)

**

ON THE AIR: NEW 2 METER SSB NET IN CALIFORNIA

On the air, if you live in California and operate on VHF, this is for you.

A newly created Santa Barbara Two Meter SSB Roundtable meets every Wednesday evening at 8:30 PM Pacific time on 144 point 210 MHz on Upper Sideband. The net is dedicated to developing interest in the use of SSB

above 50 MHz. More information is available on-line at
www.n6kth.com/vhf (Press release)

**

WORLDBEAT - POLAND: CELECRATING 75 YEARS OF THE SP DX CONTEST

The 2008 SP DX Contest takes place on April 7th and 8th. This year edition

celebrates the 75th anniversary of the contest which was first organized
in 1933. To celebrate the Polish Amateur Radio Union and SP DX Club are
sponsoring a special Jubilee Award. Called the SP DX Contest - 75th
Anniversary Award it is available free to all licensed operators and SWL's

who meet specific criteria. Complete rules are on line at
www.spdxcontest.info. (SP8AJK - SP75N)

**

DX

In D-X, HB9BEI and HB9AUZ will be at work in Liberia through the end of
April. Expect activity only during their rare spare time. Listen ouut for

HB9BEI will on CW and the digital modes. HB9AUZ works only CW. QWSL as
directed on the air.

JD1BMM will be active from Minami Torishima on H-F working in
CW/SSB/digital modes through about April 7th. QSL via the JARL bureau or

to his address on QRZ.com.

F6BUM is going to activate several islands belonging to the Gulf of
Tongking South Group through April 2nd. QSL via the bureau to F6BUM.

Also, word that the ARRL DXCC desk has approved two recent operations for
DXCC credit These are the VP6DX DXpedition to Ducie Island and the TX5C
DXpedition to Clipperton Island. Both were considred as highly uccessful
operations in the world of D-X.

Lastly, this one looks like it could be the first ever no-code
DXpedition. This as several operators from Belgian and members of South
Africa's Radio Club Secunda activate as 7P8FC from Katse Dam in Lesotho.
The operation runs from March 27th to April 3rd and they will use SSB only

on 160 meters, SSB and RTTY on 80 metres and SSB, RTTY and PSK all other HF

bands except 30 metes. They do not appear not to be using any CW. Further
information can be obtained from www.7p8fc.be.

(Above from various DX newsletters and other ources)

THAT FINAL ITEM: NEW HT MAY COMBINE HAM RADIO - CELLPHONE - CB SET --
WAFFLE IRON AND MORE

And finally this week, cellular telephone technology has come a long, long

way since Motorola introduced its first lug along cellphone more than three

decades ago. Nowadays a cellphone not only fits in your pocket, but can also function as a camera, a music player and even provide Internet access

and e-mail on the go. When might some of this technology show up in our ham

rigs? Our April 1st roving reporter Pierre Pullinmyleg says that day may not be all that far away:

--

Eef you, like me, follow all of ze latest whistles and cowbells een technologee, zen you are most likely aware of ze new Sumsing Turbo 3000 XI

Multitasking cellular telephone recently seen demonstrated on zee YouToob.

Eef you have not seen eet, eet is not only a telephone, a camera and a museek player, but also a hair dryer, air pump, waffle iron and more.

I am pleased to announce excluseevelee here on Newsline zat in a unique technology-sharing agreement wis Sumsing, amateur radio manufacturer I-Ken-Ten-su-rola will soon introduce a multitasking handheld as well. Ze new unit will not only operate on all ham bands as well as C-B, F-R-S and MURS, but it also will include a talking GPS system zat will be able to tell you where to go -- and how to get zere -- in a dozen languages, as well as an S-W-R bridge, frequency counter, soldering iron, propane torch,

five-kilowatt amplifier, emergency power generator and seex-thousand candlepower spotlight.

Oh yes, it will also include a cell phone in case no one is listening when

you call for help on your local repeeeater. Ze new radio, from Sumsing and

Ken-Ten-su-rola, will sell for five dollars and ninety-five cents, and will

be called "Sumsing Else."

For ze Amateur Radio Newsline, zees ees Pierre Pullinmyleg reporting.

--

Until the "Sumsing Else" ham rig becomes available, you can see an actual demonstration of the amazing Turbo 3000 all purpose communications device on-line at www.youtube.com/watch?v=TYIOIM6hHBk

You may be amazed by what you see. Then again, maybe not.

And lest we forget -- a happy April Fools Day to one and all.

(Courtesy of the Annual April 1st Pierre Pullinmyleg Ever Roving Report News Service)

I think of them as matters of economics and practical reality. To
wit: it should be obvious that we cannot have every possible mode
available on every band. Some limits must be imposed on the number of
modes and the way in which they share limited bandwidth. This is one of
the reasons why the FCC exists. This is one of the (ostensible) reasons
why digital modes were not allowed for many years.

> And, I also object to the idea (which I think is implied by the tone

Again, if you can't fit every possible mode onto a given band (by the
way, every possible mode means exactly that, not just modes that are

commonly used by hams - otherwise, we would have APCO 25, in addition to DV, to give just one example). Therefore, we must prioritize; some modes will be authorized, while some other modes will be excluded. This goes back to my claim that it is a matter of economics; it represents a managed resource (a limited "supply") in the face of potentially unlimited demand. It is from that perspective that I claim that old time Morse zealots are impeding progress and are attempting to arrogate to themselves a finite public good, much like cattlemen grazing their cows on public grasslands while excluding others from using those public lands for other purposes.

Considering the small, aggregate size of the HF bands, can you offer some suggestions as to how many modes can plausibly 'share the road?' What modes must be forbidden so that the modes that you like can be allowed? If you say that there are none, then perhaps we can have APCO 25, DV and DD on HF? What do you say to the hams who claim that AM shouldn't be used on HF, because it uses to much bandwidth?

Well, not every *possible* mode.

> Some limits must be imposed on the number of

the reasons why the FCC exists.

Of course. But there are other factors, such as how popular a mode is,
how much bandwidth it occupies, how it is implemented, etc.

>This is one of the (ostensible) reasons
> why digital modes were not allowed for many years.

Please elaborate, particularly on the dates and where you got thise
idea.

The information I have seen says that the main reason FCC limited the
modes amateurs could use was that FCC has to be able to monitor
amateur transmissions. So if they allowed hams to use a new mode,
their monitoring stations had to be able to decode it.

45.45 baud 5 level Baudot RTTY was authorized for amateurs in the USA
about 1948. Analog SSTV (an image mode) followed in the very early
1960s.

In the late 1970s-early 1980s, new monitoring equipment made it
possible for FCC to decode lots of modes, so US amateurs were
authorized to use ASCII RTTY, AMTOR, packet, and lots of other modes.
We're talking 20-25 years.

Of course not all modes are well-adapted to all bands. HF packet as
used by amateurs turned out to be a bit of a bust, due to being ill-
suited to HF propagation. PSK31, OTOH, has been a big hit.

The biggest impediment to digital modes in the ARS, IMHO, is the cost
of implementing them. Inexpensive PCs and "soundcard modes" have
changed all that.

With all due respect, I think you are avoiding the question. Under
current FCC rules, almost any conceivable mode can be used on the

amateur bands if it is properly documented, does not involve
encryption, and is reasonably spectrum-efficient.

Look at how PSK31 came to amateur radio for an example. It was
developed by hams, not manufacturers. It's relatively easy to
implement without a big investment of special equipment, it's well-
adapted to HF conditions and spectrum-efficient. Most of all, a
considerable number of hams find it to be fun.

> It is from that perspective that I claim that old time
> Morse zealots are impeding progress and are attempting to
> arrogate to
> themselves a finite public good, much like cattlemen grazing

How have "Morse zealots" done what you claim? In the US regulations,
there are no Morse-code-only segments of the HF bands - all are shared
with either data modes or voice modes. Every Hz. And it's been that
way at least 46 years.

Except for 2.5% of 6 and 2 meters, all of VHF/UHF and 160 are wide
open to all authorized modes for the various bands.

How are Morse-Code-using hams doing what you claim?

The cows-grazing-on-public-land analogy isn't really valid, because
amateur radio isn't a commercial venture, nor does the use of one mode
damage the band for use by others at a later time.

Try this one:

The amateur bands are like a public park system. Some are small, some
are large, some easily accessible, some remote. Depending on their
characteristics, different parks/bands are used for different
activities at different times. The question is how to best allocate
the resources to accomodate those who want to use them.

That's exactly the point. Well worth repeating!

>
> ⊠ ⊠Considering the small, aggregate size of the HF bands,
> can you offer
> some suggestions as to how many modes can plausibly
> 'share the road?'

That depends on the modes and their characteristics. For example, it's
not a good idea to allow 30 kHz FM voice on 40 meters, because that
band is only 300 kHz wide, but the same mode is fine for VHF/UHF
bands.

> What modes must be forbidden so that the modes that
> you like can be allowed?

> If you say that there are none, then perhaps we can
> have APCO 25, DV and DD on HF?

If they meet the criteria of not being encrypted, being suitable
for HF use, and being reasonably spectrum-efficient, why not?

As long as they are grouped with similar modes, what's the problem?

> What do you say to the hams who claim that AM
> shouldn't be used on HF, because it uses to much bandwidth?

That depends on how "too much bandwidth" is defined. Certainly transmitting hi-fi AM that's 10-15 kHz wide on a busy HF band is spectrum-inefficient and inconsiderate. OTOH, good-quality voice AM can be had in 6 kHz or so, and when a band is not too busy, why not use it? Similar

It seems odd that "Morse zealots", whose favorite mode uses only a few hundred Hz at most, are being held responsible for "impeding progress", when most of the HF amateur bandspace in the US are allocated to voice modes that take up much more spectrum.

Should hams stop using Morse Code? Or any other mode they now use?

We can't have all of the modes, simultaneously, with an unlimited number of users, on every band band, at the same time. Bandwidth is limited - granted.

It does not follow from that, that we must be limited to a strictly-enumerated set of modes at all times. The FCC used to assert that this was the case, but has eliminated many of those constraints in favor of an approach which favors more experimentation and development.

> Some limits must be imposed on the number of
>modes and the way in which they share limited bandwidth.

I agree that a policy that users of the band must share bandwidth in a reasonable and respectful way, is reasonable and proper.

I do *not* agree that this necessitates that only a specific set of modes be allowed.

The portion of the band which is restricted to CW-only by the FCC is *tiny* - small portions of the 2- and 6-meter bands, plus a portion of 80 which is CW-only for Novices and Technicians but not for anyone else.

Almost all of the non-phone portions of the band are *already* open to various digital modulations (per the FCC regs and per the ARRL bandplans and gentlepersons' agreements), and are quite extensively used in that fashion today.

>From where I sit out here in the cheap seats, your own attitude strikes me as more zealous, and less willing to cooperate and share, than what I observe in the people I know who operate a lot of CW.

> Considering the small, aggregate size of the HF bands, can you offer >some suggestions as to how many modes can plausibly 'share the road?'

I don't think it's a question which can meaningfully be measured in "number of modes". Some modes co-exist well, others do not.

I think it's a question of the number of _users_ of the band, at any given time, and the type and quality of the conversations that they can carry on.

>What modes must be forbidden so that the modes that you like can be >allowed?

Well, I tend to agree with the FCC that broad-spectrum audio (e.g. SSB with a DC-to-10-kHz bandwidth, or [worse] AM with a similar passband) is excessively wide - it's using more bandwidth than is reasonable for the conversation in question.

> If you say that there are none, then perhaps we can have APCO >25, DV and DD on HF? What do you say to the hams who claim that AM >shouldn't be used on HF, because it uses to much bandwidth?

I think there's room for AM, and that SSB is more bandwidth-efficient, and that the de facto practice of having AM operators voluntarily hang out in a sub-portion of the HF band works pretty well.

I guess I just don't see why you're so intent on suppressing a mode of operation which allows quite a lot of individual operators to carry on multiple independent conversations within a limited bandwidth, at one of the lowest potential equipment costs per operator of any mode.

Granted, other modes may get more *total* data traffic through the same amount of spectrum width... but these modes tend to use more spectrum width per conversation/session, and you end up with less individual users of the band at any given time.

Applying a purely "economic" model to the ham spectrum (i.e. most traffic per available Hz of bandwidth) rather misses the point, I think, because it completely discounts all of the other values (personal enjoyment, learning, development of personal skills and knowledge) in ham radio. Ham radio is *NOT* a commercial service with just a single agenda.

333. Band plans

Newsgroup: rec.radio.amateur.moderated
Date: 2008-03-29 13:20:38 UTC
From: Steve Bonine <spb@pobox.com>
Message-ID: <MvWdnX7uRpSM33PanZ2dnUVZ_sWdnZ2d@deskmedia.com>
Source record: 3004

The recent discussions got me to thinking about how the current bands are partitioned. Taking a quick look at the current US allocations indicates these portions of the HF bands in which phone is not allowed (what I would have called "CW bands" in another era):

160: None
80: 3500-3600 20%
40: 7000-7125 41%
30: None
20: 14100-14150 42%
17: 18068-18110 42%
15: 21000-21200 44%
12: 24890-24940 40%
10: 28000-28300 18%

The conclusion is that, with some exceptions, an individual who is only interested in running SSB is excluded from around 40% of most of the US allocations. Is that reasonable? Is this bandplan maximizing the use of the resource?

One definition of "optimum allocation" is providing the same usability for operators of every mode. In order to accomplish this, one needs to know the number of people who wish to use each mode. It's not possible to directly and accurately obtain this number, but perhaps counting the number of QSOs in progress might approximate it.

In the absence of any data, I'm not going to speculate about whether 40% is a reasonable number. Have there been any attempts at measuring utilization in an objective way?

How about narrow band modes on the lower 1/3 of a band,
wide band on the upper 1/3, and any mode allowed in the
middle 1/3? It would be interesting to see what happens
in the middle 1/3.

40%? Let's do the math...

Setting aside the five channels called 60 meters, an Extra Class ham
in Region 2 has 3750 kHz of spectrum available in 9 bands:

160: 1800-2000
80/75: 3500-4000
40: 7000-7300
30: 10100-10150
20: 14000-14350
17: 18068-18168
15: 21000-21450
12: 24890-24990
10: 28000-29700

Of that 3750 kHz, 2743 kHz is available for voice modes, most
typically SSB and AM. That's 73.1% of the available HF/MF amateur
spectrum available for voice modes, and only 26.9% unavailable.

26.9%, not 40%.

Of course 160, 80/75 and 10 meters skew the numbers slightly.

But there is another factor to consider: DX 'phone.

It is common for DX stations to work 'phone down below the US 'phone bands, to avoid QRM from US hams, who greatly outnumber the DX. So when a band is open, the top end of the non-phone segments are frequently full of DX phone QSOs, and unusable by US CW/data operators. Every time the US phone subbands have been widened, the 'phone DXers have moved lower too.

The end result of this is that, when the bands are open for DX, the amount of band available to non-phone modes is effectively reduced below that 26.9%

> Is that reasonable? Is this bandplan maximizing the use
> of the resource?

Depends what you mean by "maximize". The digital/data folks are squeezed into only 1217 kHz of the 3750, which is 32.45%.

> One definition of "optimum allocation" is providing the
> same usability for operators of every mode.

But is that a definition we hams should use without question? Should the users of wide modes be rewarded by getting more and more of a limited band?

Imagine if the price you paid for gas depended on the MPG of the car you drove, with low MPG cars paying less and high MPG cars paying more. Or suppose gasoline were rationed, and ration cards distributed the same way. Would that make the best use of a limited fuel supply, by rewarding those who use the most?

> In order to accomplish this, one needs to
> know the number of people who wish to use each mode.
> It's not possible
> to directly and accurately obtain this number,
> but perhaps counting the
> number of QSOs in progress might approximate it.

That depends on when a sample is taken, though. During a contest or other operating activity that favors one mode, the results may be very unrepresentative.

> In the absence of any data, I'm not going to speculate about
> whether 40%
> is a reasonable number. Have there been any attempts at
> measuring
> utilization in an objective way?

One way to consider is how the bands are used in a situation like Field Day, where voice, data and Morse Code modes are all in use simultaneously, and records of how many QSOs actually resulted available. Of course the results are somewhat skewed by the fact that 12, 17 and 30 meters are not part of Field Day, that FD isn't just HF, and the different skill levels needed to use various modes.

The USA band restrictions serve a very usefull purpose for the rest of
the world. It gives us a chance of finding a frequency that is not
full of american chatter. If the band is open the USA general section
is almost invariably solid with high power QRM.

That's a double-bladed sword you're waving there. Plenty of foreign phone signals are to be found in the upper portions of various bands. Where to the U.S. radio amateurs go to avoid the non-U.S. chatter.

I don't think there is any was to determine whether U.S. ops are running high power or not. Propagation may favor one area over another; someone might be running low power with an outstanding antenna system. Defining the mere presence of signals as "QRM" might cause some to take offense.

One question which begs asking is why foreign phone stations should have a shelter from U.S. stations when U.S. stations have no similar shelter available to them? Another puzzler is why foreign CW stations seem to get by just fine without a similar refuge from Americans.

Because there are so many more US stations than foreign ones in any particular country (except Japan 4th class). Working the USA is 1 DXCC country.

Here's a similar question: Why do 'phone stations need to be protected from data signals but CW signals don't need that protection? IOW, why not allow data modes in the 'phone bands?

That's an explanation, though perhaps not a valid one. We W's manage to work all the DX there is to work despite the presence of strong QRM from W QRM--both those who are ragchewing and those who are working DX. Things aren't the same as in the old days when many DX stations were rock bound or ran lesser quality equipment or had less than optimal antenna systems. In fact much of the world runs the same Kenwood, Icom, Yaesu and Ten-Tec equipment as the American stations. The garden variety foreign stations sometimes QRM's the rare stuff. Many of the garden variety foreigners are also in the chase for that same rare DX. The time is long past for divided phone band segments. I believe that the phone bands should be harmonized worldwide.

> Here's a similar question: Why do 'phone stations need to be protected

I think the answer to that is that CW ops are typically using narrow receiving filters while phone ops may be listening through 2.4 or 2.7 KHz filters. A little of that digital signal cacophony can wreak havoc with a phone QSO.

Actually, according to the DXCC list:

http://www.arrl.org/awards/dxcc/dxcclist.txt

somewhere between 3 and 19 DXCC "entities," depending on how you define "USA."

Three, if you consider only the 50 states:

K,W,N,AA-AK United States of America
KL7 Alaska
KH6-7 Hawaii

Fifteen more if you consider territories, possessions, and commonwealths:

KH0 Mariana Islands
KH1 Baker, Howland Islands
KH2 Guam
KH3 Johnston Island
KH4 Midway Island
KH5 Palmyra, Jarvis Islands
KH5/K Kingman Reef
KH7K Kure Island
KH8 American Samoa
KH8 Swains Island
KH9 Wake Island
KP1 Navassa Island
KP2 U.S. Virgin Islands
KP3,4 Puerto Rico
KP5 Desecheo Island

And then of course there's this one, under U.S. control, but energetically debated over whether it's a "jurisdiction" of the United States:

KG4 Guantanamo Bay

Sort of. Remember that often the DX is transmitting outside the US
'phone subband.

Agreed.

> The time is long past for divided phone band segments.
> I believe that

> the phone bands should be harmonized worldwide.

Be careful what you ask for.

In much if not most of the rest of the world, there are no subbands-by-mode. The amateur regs simply state which modes are allowed on each band, and leave the rest up to gentleman's agreements.

Harmonizing the US phone subbands to the rest of the world would mean either imposing US regs on other countries, or removing subbands-by-modes from US regs.

It seems to me that countries which do not have subbands-by-mode would resist following the US example and adding them, if for no other reason than that they'd no longer have a refuge from US 'phone QRM.

Proposals to remove subbands-by-mode from the US regs have met with clear and strong opposition from US hams. The recent proposal from the "Communications Think Tank", which would have eliminated subbands-by-mode, was strongly opposed in comments to FCC - so much that CTT removed the proposal. Any such proposal means "data in the phone bands", too.

Can't such interference be dealt with using a notch filter? A PSK31 signal is only a few dozen Hz wide, for example.

Even more basic, isn't it the responsibility of all operators to avoid transmitting on top of existing QSOs? Why would digital ops behave differently in this regard when faced with 'phone signals vs. CW signals?

Let's not forget that while 160m is not partitioned in the U.S., the
ARRL band plan for the band calls for no phone below 1843 KHz
Digital signals stay between 1800-1810 and the 1995-2000 portion is used
for experimental/beacon use.

Point well taken. It works pretty well for the most part. Contests are
a different matter. Let's take the 40m band as an example of when it
doesn't work well. In a phone contest, foreign SSB stations can often
be heard CQing as low as 7.010 despite the fact that the IARU bandplan
calls for them to no go below 7.030 or .035 as I recall.

I'd like to get away from that "refuge" concept as some sort of foreign
entitlement. I'd also like to get away from the idea that U.S. phone
operation is "QRM". We're big boys and they're big boys. We don't
piddle in our end of the pool and they don't piddle in theirs.

I'm not proposing that we do away with sub-bands by mode. What I'm
proposing is to expand our phone bands down to 14.112 and 21.151 on SSB

...but a Pactor signal is a couple of hundred Hz wide and an RTTY signal
is only a little less. I can vary the width of my notch filter as well
as the center frequency. Can everyone do that? Passband tuning helps too.

> Even more basic, isn't it the responsibility of all operators to avoid

That's one reason that I think it is a good idea to maintain sub-bands
by mode. Many digital ops aren't listening to audio at all. Many CW
ops are using filters as narrow as 100 Hz. Phone ops may hear them but
they may not hear a phone signal, especially if it is weak.

The short answer is yes. The longer answer is that we have all these wonderful controls on our radios, sometimes we need to use them.

I learned a lot about CW filters, PBT, notching etc, with my PSK31 waterfall setup. As you invoke and adjust the various functions, the noise floor of the waterfall gives a nice graphic display of what each filter does.

Yes, and they don't as far as I know.

I think that on some bands, such as 20 meters, a person can accidentally stomp on another due to propagation, So often we only hear (or see) one side of the QSO. We fire up, and soon the Ham we can hear and can hear us tells us of our error.

I wonder what frequencies G4JCI is referring to? And note to G4JCI:I think you might have a typo in your call sign, there isn't any reference on QRZ to that call.

The call is perfectly OK since around 1977, in the UK we have a privacy
option which stops the RSGB and others including us in callbooks etc.
The call was previously ZS6N but that has since been re-issued to
someone else after I left ZS land in 1982.

My point is that here in Europe we have to get by with a concealed
wire antenna in the attic and QRP to avoid TVI complaints etc.
All too often some clown (usually in the USA) can barely hear us and
cranks up with a few kilowatts and an antenna farm. This same clown
usually gets a 30/9 report from someone and chews the rag for half
an hour at the same output instead of reducing power to the minimum
required to maintain communications.

It is this inconsiderate behaviour which gives USA operators a bad
reputation in the rest of the world. Of course there are plenty
of good guys out there, as always it is the bad operators who set
the bad standards.

That can happen on any HF band, I believe.

This issue was behind a lot of the protest over one aspect of the
ARRL's now-withdrawn "sub-bands by bandwidth" proposal. The proposal
had suggested opening up a much larger portion of the band to
unattended and semi-attended digital stations (typically, email
servers). Such systems are rather notorious for "stepping on" QSOs in
progress, due in part to this "only can hear one half of the existing
QSO" problem.

Right. Now add a couple hundred thousand US hams to that mix....

Point is, the foreign 'phone folks may not agree with you. How do we
in the USA
sell the idea that other countries should add limited phone subbands
to their rules?

> proposing is to expand our phone bands down to 14.112 and 21.151 on SSB

OK, but what will happen is that the DX phones will simply move even
further down the band. It's happened every time.

So if one plops down on top of a CW QSO the mess is at least as bad as
if one plops down on a 'phone QSO. But 'phone QSOs are protected from
such interference while CW QSOs aren't.

>&#65533; I can vary the width of my notch filter as well

helps too.

Yep. So does a good antenna system and lotsa watts.

ny CW
> ops are using filters as narrow as 100 Hz. &#65533; Phone ops may hear them b
ut
> they may not hear a phone signal, especially if it is weak.

The problem is that under current rules, as the US phone subbands get
wider, the CW/data subbands get narrower, and the spectrum-efficient
modes get squeezed more and more. That's just not right.

I think W5DXP's idea has the most merit: Wide modes at the top of the
band, narrow modes at the bottom, shared space in the middle.

True, I used 20 meters as an example because it is the most common band
with the "worst" problem.

> This issue was behind a lot of the protest over one aspect of the

Many is the time that those robot stations have obliterated the PSK-31
segment of 20 meters. Two of them close the band. They don't check, they
just start transmitting, and they keep it up, presumably until they get
acknowledgment from another robot station.

It got so bad that Digipan added a decoder for the mode (no transmit) so
that we gould catch the callsigns, record the disruption, and and turn
them in to the FCC. Apparently this worked, because the problem is
diminishing.

HAM RADIO IN SPACE: NZ KIWISAT TO BE HAM RADIO ENVIRO-BIRD

The planned New Zealand KiwiSAT ham radio satellite will also be a ham
radio environmental research bird as well. Amateur Radio Newsline's
Jim Meachen, ZL2BHF, is in Auckland with more:

--

Late word from AMSAT New Zealand is that the KiwiSAT ham radio
satellite will now carry an additional special beacon available for
use by radio amateurs around the world. This, to collect data on
atmospheric aberrations and to assist with information collection
directly associated with global warming concerns and carbon balance
monitoring.

Details have yet to be finalized however the KiwiSAT structure has
been modified to incorporate a second 70cm monopole antenna and a high
level of filtering has been incorporated to minimize any desensitizing
of the on-board 70 centimeter receivers. Once in space, the beacon
will be switched as required but will normally be "on" for a given
whole orbit to provide for data collection

Meantime, the KiwiSAT linear flight transponder is currently
transmitting from the Whangaparaoa area with beam antennas pointing
South. This transponder is inverting type to compensate for Doppler
shift when in orbit. Its transmit Power is 2 Watts PEP. Its uplink
is Uplink is from 435.265 to 435.235 MHz on lower sideband and the
downlink 145.850 to 145.880 MHz on upper sideband. The inverting
transponder is used to correct for Doppler shift.

Reporting from Auckland, I'm Jim Meachen, ZL2BHF, for the Amateur
Radio Newsline.

--

KiwiSAT is currently planned for launch in mid to late 2009. Its planners say that KiwSAT is designed for low duty cycle modes and the use of FM wile not outright banned will be discouraged. Further information is on-line at www.kiwisat.org and we will have more ham radio space related items later on in this weeks news. (AMSAT ZL)

**

RADIO RULES: LEGAL UNLICENSED TRANSMITTERS HARMING UK REPEATER OPERATIONS

Unlicensed low power devices are creating a problem for some UHF repeater operations in the U-K. And its all quite legal. Jeramy Boot, G4NJH, explains:

--

A concern to both the amateur radio services and the MoD is the growing proliferation of Short Range Devices (SRDs) that are operating in the 70 cm band and raising the noise floor. A recent trial that used 433MHz channels as inputs for D-Star equipment tests proved to be unsuccessful due to the high noise floor.

According to an EU Directive the official SRD sub-band within 70cms is 433.05-434.79MHz using a maximum of 10mW ERP. This includes handheld Low Power Devices (LPDs) permitted to use FM voice on channels that include a number of repeater inputs.

I'm Jeramy Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

What if anything can be done by U-K hams to elevate this situation is, at airtime, unknown. (Adapted from GB2RS story)

**

RADIO POLITICS: RSGB SAYS 70 CM PETITION FILLED WITH MISINFORMATION

Still in the U-K, an electronic petition to Great Britain's Prime Minister's office titled "70 cmsband", has generated what is being described by the Radio Society of Great Britain as a "lemming like" response from the U-K amateur radio community. And from the society's public response, the petition also seems to have more than just annoyed the political leaders at the RSGB.

According to a notice posted at the Radio Society of Great Britain's website, the petition which originated just before the recent Easter break and has no foundation in truth. While the text of the petition could not be found on the web, it appears to have been derogatory in some way toward the RSGB. This because in its own posting the U-K national society asserts that it currently enjoys a good working relationship in negotiations with both telecommunications regulator

Ofcom and the Ministry of Defense in regard to the 70 centimeter and other shared bands.

This RSGB says that the type of dis-information as that contained in the mysterious petition could undermine the relationship between the society and government policy makers. It also strongly advised all U-K hams to check the facts with the society before adding their name to such petitions.

And less we forget, the encyclopedia describes a lemming as a mouse-like rodent living in arctic or northern regions. The Norway lemming is the best known because of its spectacular periodic swarming that sometimes leads the migrating rodents to jump from cliffs into bodies of water as they migrate. (Adapted from GB2RS story)

**

RESTRUCTURING: US HAM POPULATION SHOWS MODERATE GROWTH

Some moderately good news regarding growth in numbers of FCC licensed radio amateurs. In his latest posting of license statistics to QRZ dot com, George Mc Couch, K3UD, says that it looks like overall Amateur Radio Service numbers have increased by 912 from January through March 2008.

According to George, the Technician and Technician Plus category had large increases while General had small increases. As expected. Novice and Advanced declined.

According to George, it appears as if the Technician license is still the most popular entry to the hobby for newcomers, making good gains over the last 2 quarters. Also, the movement to upgrade to Extra class is continuing. On the downside, it seems like the large movement from hams upgrading to General after the last round of restructuring has slowed to trickle over the last 6 months.

The bottom line. George says that this is the largest quarterly increase he has seen in a long time. You can read the good numbers on the news pages at www dot qrz dot com under the title Amateur Radio Growth in the 1st Quarter 2008: A look at the numbers. And our thanks to George Mc Couch, K3UD, for his ongoing volunteer effort to keep the ham radio public so well informed.

ENFORCEMENT: UK COMPONENT SALES TO PIRATE BROADCASTERS BRINGS HEAVY FINE

Turning to enforcement news, word that selling electronic parts that might wind up being used for illegal purposes can get you in trouble in the United Kingdom. Witness the case of two directors of a U-K radio parts supplier who recently pleaded guilty of supplying gear to what we in the U-S-A call pirate broadcasters.

The pleas were recently entered in Croydon Magistrates Court by the Broadcast Warehouse, which is a Croydon area radio and component supplier. According to a report in the London Register, the firm pleaded guilty to the charges after Broadcast Warehouse components were found in transmitters seized by U-K telecommunications regulator Ofcom from unlicensed stations.

The paper says that the company and the directors were each fined ï¿½10,000. An additional ï¿½90,000 was also assessed in court fees. The full story is on-line at www.theregister.co.uk/2008/03/28/ofcom_broadcast_warehouse/ (Southgate)

**

ENFORCEMENT: UNLICENSED STATION OPERATOR FINED $17000

The Federal Communications Commission has issued a o$17,000 monetary forfeiture to Craig Watkins for operating an unlicensed radio transmitter on the frequency 106.3 MHz in Bronx, NY and willfully violating the Communications Act by refusing an inspection of the station. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

On March 7, 2007, the FCC New York Office received a complaint from an engineer representing FM station WFAF, which operates on 106.3 MHz in Mt. Kisco, NY. The engineer reported that an illegal broadcast station operating on 106.3 MHz in Bronx, NY was causing interference

to WFAF.

Three days later FCC Commission agents, using a mobile direction finding vehicle, monitored 106.3 MHz. The agents observed a broadcast on 106.3 and identified the source of the transmissions as an FM broadcasting antenna on a roof on East 229th Street in the Bronx..

Commission agents then conducted an investigation on the roof and observed an FM broadcast antenna mounted to the chimney of the building that was connected to a coaxial cable leading into a window of an upstairs apartment. The agents then knocked on the door to the upstairs apartment of the two-family house. When the man who answered the door was asked about the radio station, he stated that he was a visitor and that he knew nothing about the radio station. When agents asked him to turn off the transmitter, he did so. The man also advised the agents that the apartment's resident was not at home.

While speaking to the man at the upstairs apartment door, the agents were approached by the building owner. The agents advised the owner that an unauthorized radio station was being operated by someone in the upstairs apartment. He phoned the resident, Craig Watkins, and asked him to return to the residence. When Watkins arrived, the agents questioned him about the radio station and he admitted that there was radio equipment in his apartment, but he stated that no radio station existed. Watkins refused to allow the agents to inspect the equipment. The agents issued Watkins a Notice of Unlicensed Radio Operation for operating an unlicensed radio station on 106.3 MHz and for refusing to allow inspection of the radio equipment. After returning to the vehicle, the agents monitored 106.3 MHz and noted that the station was off the air.

But it did not stay off. On March 14th, a Commission agent, observed a radio broadcast on 106.3 MHz and identified the source of the transmissions as an FM broadcasting antenna on the roof of the same East 229th Street building. The agent took field strength measurements and determined that the signals being broadcast exceeded the limits for operation under Part 15 of the Rules and therefore required a license. So on July 27th the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Watkins for operating an unlicensed radio transmitter and refusing to allow an inspection of the radio station equipment..

Watkins filed a response to the NAL on August 25, 2007. In his response, Watkins did not deny that there was radio station equipment in his apartment and he did not claim that the equipment was there without his permission. He did however claim that he did not know anything about the operation of a radio station. He indicated that he questioned his brother-in-law and his brother-in-law's friends about the radio station equipment and the antenna on the roof, but he was not able to obtain any information from them. Watkins did not address his refusal to allow the agents to inspect the equipment.

In affirming the fine, the FCC says that Watkins was identified by the building owner as the resident of the upstairs apartment and in his response to the Notice of Apparent Liability, Watkins states that he does resides at that address. Although Watkins does not admit to operating the radio station, he confirmed that there is radio station equipment in his apartment. Watkins does not state that such equipment was there without his permission. As a result, they found that Watkins provided services and facilities incidental to the transmission of communications by radio occurring on 106.3 MHz from his home.

The FCC says that it has previously held that liability for unlicensed operation may be assigned to any individual taking part in the operation of the unlicensed station, regardless of who else may be responsible for the operation. This is because Section 301 of the Communications Act says that no person shall use, or operate, radio transmission equipment without an FCC license.

Taken together, the FCC finds that Watkins's actions amounted to willful and repeated violations of the Communications Act and that the $17,000 fine is affirmed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in the newsroom in Los Angeles.

--

Watkins was given the customary 30 days to pay or to file an appeal. (FCC)

**

WITH THE FCC: FCC SEEKS ENGINEERING SCHOOL GRADS FOR EIT

The Federal Communications Commission says it is seeking applications from engineering school graduates with superior academic credentials and an interest in communications engineering. This, for its 2008 Engineer-in-Training Program.

The Engineer-in-Training Program helps the commission recruit new and recent engineering school graduates to the agency and the field of communications. Recent engineering grads and candidates for graduation this spring are invited to apply for openings in the program's 2008 class.

Additional information is available on the FCC's EIT Program page at www.fcc.gov/EITprogram, or by contacting the FCC's Human Resources Office at area code 202 -418-0130. You can also e-mail for more information to <mailto:recruit%40fcc.gov>recruit@fcc.gov. (FCC)

HAM HAPPENINGS: THE K0S STRANGE ANTENNA CHALLANGE

Now here's one that should catch the attention of a lot of you. Erik Weaver N0EW sent along a note to tell us about the upcoming K Zero-S Strange Antenna Challenge slated for Memorial Day weekend, May 24th to the 26th.

What is a strange antenna challenge you ask? According to Erik, its an event where antennas are not permitted to be constructed of wire or metal pipe. Rather, those taking part must use their imagination to design radiators that are untraditional. Erik says that past antennas have included such items as metal folding chairs, chicken wire, fences, ladders, and even a trampoline.

If this sound like a fun way to spend Memorial Day weekend, you can get more information on-line at www.n0ew.org/k0s/ (N0EW)

**

HAM HAPPENINGS: THE WORLD WIDE ATV OPEN HOUSE

The A-T-V Newsletter is putting together a World Wide ATV Open House . In this case ATV means Amateur Television and it will be a virtual open house aimed at getting more members for Amateur Television groups and clubs while making all radio amateurs aware of ATV.

The Open House will run for 24 hours on a date somewhere between September and the first part of December yet to be finalized and will be open to all radio amateurs that want in on the fun. By taking advantage of the Voice over I P technology and the Internet and using streaming communications via Skype, Echolink, and the like, numerous virtual QSO can be made. For more information please e-mail world-wide-atv-repeater-network at hotmail dot com (N6IFU)

**

THE SOCIAL SCENE: AN INVITE TO JOIN THE FLYING HAMS REMAILRT

If you are a ham licensed as a pilot, a student pilot or just interested in aviation, you might want to consider joining the Flying Hams User Group. Formed by Daniel Hileman, N9WX, in Peru, Indiana, the group currently meets only in cyberspace using a yahoogroups remailer. Topics discussed range from technical issues to flight training to discussions of aircraft and the social aspect of both hobbies. To join just send a blank e-mail to <mailto:Flying_Hams-subscribe%40yahoogroups.com>Flying_Hams-subscribe@yahoogroups.com
(Flying Hams)

**

THE SOCIAL SCENE: LSDXA HAM COM DX DINNER IN JUNE

The Texas-based Lone Star DX Association has announced that Eric Scace, K3NA, will be the keynote speaker for the organizations DX Dinner Banquet at HamCom 2008. Eric Scace was the co-leader of the recent record breaking VP6DX Ducie Island operation. His presentation

is long awaited. HamCom is slated for June 13th and 14th at the Plano Center, north of Dallas. More information about the DX dinner and the convention is on line at www.hamcom.org (LSDXA)

WORLDBEAT - SABLE ISLAND: MAGIC BAND DXPEDITION ANNOUNCED

If you operate on the Magic Band, listen up. A 6-meter DXpedition to Sable Island scheduled to take place from June 25th through July 7th. The Ohio Penn DX Newsletter reports that VE3IKV, K5AND and W3CMP will be active from the rare enclave using the callsign CY0X on both CW and SSB.

Their fixed location 6 meter station will be in grid square FN93. The group will also try to activate rare grid GN03 using the callsign CY0RA if there is a solid opening. For this they are totting along a portable station with a 5 element yagi. In both cases the operators will be transmitting on 50.117 MHz and requests that those they might make contact with not send their grid square as it consumes valuable time during a DX opening.

This CY0X operation will also operate on 20 meters and 40 meter CW and SSB but the High Frequency operation will take lower priority over the 6 meters. QSL's go via VE3IKV and there is more on this upcoming operation is on-line at www.cy0x.com (OPDX)

**

RADIOSPORTS: 2007 FALL SPRINT SCORES NOW ON LINE

Jim Worsham, W4KXY, says that the results for the 2007 Fall Sprints, sponsored by the Southeastern VHF Society, are now available for viewing on line. Jim also says that all of the first, second and third place winners are invited to attend the Southeastern VHF Society conference in Orlando, Florida on April 25th and 26th to receive their award certificates at the Saturday night banquet. Information on attending the conference is available at www.svhfs.org. (W4KXY)

**

DX

In DX, word that ON5AX and ON3AX continue to be active from the Pacific locations on their three month tour. Their next stop is Australia with both operating portable V-K-4 through April 7th. QSL direct to ON5AX or ON3AX.

And here's one that hams all along the North American East coast with 4 meter receive capability might want to listen out for. Sunday 6th April between 09.00 and 12.00 UTC sees the RSGB 70MHz contest. All modes are permitted and the exchange is the normal R-S-T, serial number and locator. While hams this aide of the Atlantic cannot transmit on 70 MHz, they can listen in and use the contest as a propagation study of the 4 meter band.

Thanks to good weather conditions, the ship SA Agulhas has reached Marion Island and Petrus Kritzinger, ZS8T, is now there for at least 12 months. According to announced plans, the science work for the first few weeks will take precedence and ZS8T's activity won't start earlier than the end of April. This means any station using that call will be a pirate. Once operations are ready to start, an announcement will be made on the ZS8T.net website.

Lastly the 9-X-zero-R operation from Rwanda is now QRT. During the operation The multi-national DXpedition team made just under 63,000k QSO's. Of these about 31,000 of these were on CW, 26,000 on SSB and 4,900 on RTTY. If you worked this one, QSL via EA5RM.

Above from various DX news sources

**

RESULTS OF AR NEWSLINE POLL RESULTS: SHOULD D-STAR REPEATERS OPERATE ONLY IN REPEATER SUBBANDS?

Finally this week, the answer to the survey question that asked if D-Star digital voice repeaters be restricted to operate in the same designated subbands as traditional analog FM. The results were not at all surprising.

83% of those responding wanting D-Star repeaters to be restricted to existing repeater subbands. 17% said its OK for them to operate wherever in a given band that the owner might desire. These results seem to echo what's being read on various VHF and UHF remailers and public posting websites.

There is one caveat to this survey. Of the tens of thousands of you out there with web access, only 324 of you took the time to vote in this one. We have no idea if this means a lack of interest in the mode or that you are not that concerned about band planning. We do thank those of you who took the time to go to www.arnewsline.org to do so. (ARNewsline")

**

THAT FINAL ITEM - APRIL 2008 POLL: GAS PRICES VS. HAMFESTS

Now, we are switching gears for our next on-line survey. According to the Department of Energy, the national average retail price of a gallon of regular grade gasoline now about $3.40. The DoE has also long been hinting that the pre-tax cost could soon exceed $4 a gallon or more. Now, add on federal, state and even local taxes and a gallon could easily hit $4.50. With this in mind, we would like to know how high will the pump price of a gallon of gasoline have to go to keep you from driving that 50 or 60 mile round trip to your favorite hamfest of convention?

Taking part in this survey is easy. Just take your web browser over to www.arnewsline.org. Then scroll down the page until you see the word polls on the left hand side. Then just click on the dollar amount that's closest to the maximum you would bay for a gallon of gas before leaving the car in your driveway and bypassing this years event. The up to the minute results will be displayed once you have cast your vote.

We will leave this survey on-line through the end of April. Again, that's www.arnewsline.org on the left side of the page under the word polls to make your opinion known on this one. (ARNewsline")

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is <mailto:newsline%40arnewsline.org>newsline@arnewsline.org. More information is available at Amateur
Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

Amateur Radio Newsline(tm) Report 1599 - April 4, 2008 -Updated

(Includes full text of Utah rescue story)

Amateur Radio Newsline report number 1599 with a release date of Friday, April 4tht, 2008 to follow in 5-4-3-2-1.

The following is a QST. KiwiSAT goes green, unlicensed devices play havoc with U-K repeaters, some good news on the ham radio numbers front and we ask how far you will drive to a hamfest if gasoline climbs to $4 a gallon or more. Find out how to answer the question on Amateur Radio Newsline(tm) report number 1599 coming your way right now.

HAM RADIO IN SPACE: NZ KIWISAT TO BE HAM RADIO ENVIRO-BIRD

The planned New Zealand KiwiSAT ham radio satellite will also be a ham radio environmental research bird as well. Amateur Radio Newsline's Jim Meachen, ZL2BHF, is in Auckland with more:

--

Late word from AMSAT New Zealand is that the KiwiSAT ham radio satellite will now carry an additional special beacon available for use by radio amateurs around the world. This, to collect data on atmospheric aberrations and to assist with information collection directly associated with global warming concerns and carbon balance monitoring.

Details have yet to be finalized however the KiwiSAT structure has been modified to incorporate a second 70cm monopole antenna and a high level of filtering has been incorporated to minimize any desensitizing of the on-board 70 centimeter receivers. Once in space, the beacon will be switched as required but will normally be "on" for a given whole orbit to provide for data collection

Meantime, the KiwiSAT linear flight transponder is currently transmitting from the Whangaparaoa area with beam antennas pointing South. This transponder is inverting type to compensate for Doppler shift when in orbit. Its transmit Power is 2 Watts PEP. Its uplink is Uplink is from 435.265 to 435.235 MHz on lower sideband and the downlink 145.850 to 145.880 MHz on upper sideband. The inverting transponder is used to correct for Doppler shift.

Reporting from Auckland, I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

KiwiSAT is currently planned for launch in mid to late 2009. Its planners say that KiwSAT is designed for low duty cycle modes and the use of FM wile not outright banned will be discouraged. Further information is on-line at www.kiwisat.org and we will have more ham radio space related items later on in this weeks news. (AMSAT ZL)

**

RADIO RULES: LEGAL UNLICENSED TRANSMITTERS HARMING UK REPEATER OPERATIONS

Unlicensed low power devices are creating a problem for some UHF repeater operations in the U-K. And its all quite legal. Jeramy Boot, G4NJH, explains:

--

A concern to both the amateur radio services and the MoD is the growing proliferation of Short Range Devices (SRDs) that are operating in the 70 cm band and raising the noise floor. A recent trial that used 433MHz channels as inputs for D-Star equipment tests proved to be unsuccessful due to the high noise floor.

According to an EU Directive the official SRD sub-band within 70cms is 433.05-434.79MHz using a maximum of 10mW ERP. This includes handheld Low Power Devices (LPDs) permitted to use FM voice on channels that include a number of repeater inputs.

I'm Jeramy Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

What if anything can be done by U-K hams to elevate this situation is, at airtime, unknown. (Adapted from GB2RS story)

**

RADIO POLITICS: RSGB SAYS 70 CM PETITION FILLED WITH MISINFORMATION

Still in the U-K, an electronic petition to Great Britain's Prime Minister's office titled "70 cmsband", has generated what is being described by the Radio Society of Great Britain as a "lemming like" response from the U-K amateur radio community. And from the society's public response, the petition also seems to have more than just annoyed the political leaders at the RSGB.

According to a notice posted at the Radio Society of Great Britain's website, the petition which originated just before the recent Easter break and has no foundation in truth. While the text of the petition could not be found on the web, it appears to have been derogatory in some way toward the RSGB. This because in its own posting the U-K national society asserts that it currently enjoys a good working relationship in negotiations with

both telecommunications regulator Ofcom and the Ministry of Defense in regard to the 70 centimeter and other shared bands.

This RSGB says that the type of dis-information as that contained in the mysterious petition could undermine the relationship between the society and government policy makers. It also strongly advised all U-K hams to check the facts with the society before adding their name to such petitions.

And less we forget, the encyclopedia describes a lemming as a mouse-like rodent living in arctic or northern regions. The Norway lemming is the best known because of its spectacular periodic swarming that sometimes leads the migrating rodents to jump from cliffs into bodies of water as they migrate. (Adapted from GB2RS story)

**

RESTRUCTURING: US HAM POPULATION SHOWS MODERATE GROWTH

Some moderately good news regarding growth in numbers of FCC licensed radio amateurs. In his latest posting of license statistics to QRZ dot com, George Mc Couch, K3UD, says that it looks like overall Amateur Radio Service numbers have increased by 912 from January through March 2008.

According to George, the Technician and Technician Plus category had large increases while General had small increases. As expected. Novice and Advanced declined.

According to George, it appears as if the Technician license is still the most popular entry to the hobby for newcomers, making good gains over the last 2 quarters. Also, the movement to upgrade to Extra class is continuing. On the downside, it seems like the large movement from hams upgrading to General after the last round of restructuring has slowed to trickle over the last 6 months.

The bottom line. George says that this is the largest quarterly increase he has seen in a long time. You can read the good numbers on the news pages at www dot qrz dot com under the title Amateur Radio Growth in the 1st Quarter 2008: A look at the numbers. And our thanks to George Mc Couch, K3UD, for his ongoing volunteer effort to keep the ham radio public so well informed.

RESCUE RADIO: HAM RADIO TO THE RESCUE WHERE CELLPHONES DON'T WORK

Ham radio has once again proven it can provide emergency communications to the outside world when cellphones can't. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno with more:

--

In the most recent instance KSL television reported on March 28th that a driver passing through Utah's remote Logan Canyon lost control of her truck in the snow. The vehicle fell more than 100 feet over a cliff. Two of her three passengers were thrown out.

Other drivers stopped to help, but with no cell phone coverage in the isolated area, it was at least a 30 minute drive to make a phone call. But Eldon Kearl, K7OGM, of Fish Haven, Idaho, had a communications system that could call for assistance out of the remote canyon area.

Using his portable ham gear, Kearl contacted Roger Ellis, KE7THE, of Logan, Utah. Ellis, who says he's still new to Amateur Radio says that he was able to relay information to the 911 emergency response dispatchers. A half hour later, help was on the scene.

Late word is that everyone survived the crash with only minor injuries. The Utah Highway Patrol says if not for Kearl and Ellis getting help to the scene so quickly, those injuries could have become a lot worse.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

You can see the entire KSL report that includes interviews with both K7OGM and KE7THE at www.ksl.com/index.php?nid8&sid)60552# (N9MSM)

ENFORCEMENT: UK COMPONENT SALES TO PIRATE BROADCASTERS BRINGS HEAVY FINE

Turning to enforcement news, word that selling electronic parts that might wind up being used for illegal purposes can get you in trouble in the United Kingdom. Witness the case of two directors of a U-K radio parts supplier who recently pleaded guilty of supplying gear to what we in the U-S-A call pirate broadcasters.

The pleas were recently entered in Croydon Magistrates Court by the Broadcast Warehouse, which is a Croydon area radio and component supplier. According to a report in the London Register, the firm pleaded guilty to the charges after Broadcast Warehouse components were found in transmitters seized by U-K telecommunications regulator Ofcom from unlicensed stations.

The paper says that the company and the directors were each fined ï¿½10,000. An additional ï¿½90,000 was also assessed in court fees. The full
story is on-line at
www.theregister.co.uk/2008/03/28/ofcom_broadcast_warehouse/ (Southgate)

**

ENFORCEMENT: UNLICENSED STATION OPERATOR FINED $17000

The Federal Communications Commission has issued a o$17,000 monetary forfeiture to Craig Watkins for operating an unlicensed radio transmitter on the frequency 106.3 MHz in Bronx, NY and willfully violating the Communications Act by refusing an inspection of the station. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

On March 7, 2007, the FCC New York Office received a complaint from an engineer representing FM station WFAF, which operates on 106.3 MHz in Mt. Kisco, NY. The engineer reported that an illegal broadcast station operating on 106.3 MHz in Bronx, NY was causing interference to WFAF.

Three days later FCC Commission agents, using a mobile direction finding vehicle, monitored 106.3 MHz. The agents observed a broadcast on 106.3 and identified the source of the transmissions as an FM broadcasting antenna on a roof on East 229th Street in the Bronx..

Commission agents then conducted an investigation on the roof and observed an FM broadcast antenna mounted to the chimney of the building that was connected to a coaxial cable leading into a window of an upstairs apartment. The agents then knocked on the door to the upstairs apartment of the two-family house. When the man who answered the door was asked about the radio station, he stated that he was a visitor and that he knew nothing about the radio station. When agents asked him to turn off the transmitter, he did so. The man also advised the agents that the apartment's resident was not at home.

While speaking to the man at the upstairs apartment door, the agents were approached by the building owner. The agents advised the owner that an unauthorized radio station was being operated by someone in the upstairs apartment. He phoned the resident, Craig Watkins, and asked him to return to the residence. When Watkins arrived, the agents questioned him about the radio station and he admitted that there was radio equipment in his apartment, but he stated that no radio station existed. Watkins refused to allow the agents to inspect the equipment. The agents issued Watkins a Notice of Unlicensed Radio Operation for operating an unlicensed radio station on 106.3 MHz and for refusing to allow inspection of the radio equipment. After returning to the vehicle, the agents monitored 106.3 MHz and noted that the station was off the air.

But it did not stay off. On March 14th, a Commission agent, observed a radio broadcast on 106.3 MHz and identified the source of the transmissions as an FM broadcasting antenna on the roof of the same East 229th Street building. The agent took field strength measurements and determined that the signals being broadcast exceeded the limits for operation under Part 15 of the Rules and therefore required a license. So on July 27th the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Watkins for operating an unlicensed radio transmitter and refusing to allow an inspection of the

radio station equipment..

Watkins filed a response to the NAL on August 25, 2007. In his response, Watkins did not deny that there was radio station equipment in his apartment and he did not claim that the equipment was there without his permission. He did however claim that he did not know anything about the operation of a radio station. He indicated that he questioned his brother-in-law and his brother-in-law's friends about the radio station equipment and the antenna on the roof, but he was not able to obtain any information from them. Watkins did not address his refusal to allow the agents to inspect the equipment.

In affirming the fine, the FCC says that Watkins was identified by the building owner as the resident of the upstairs apartment and in his response to the Notice of Apparent Liability, Watkins states that he does resides at that address. Although Watkins does not admit to operating the radio station, he confirmed that there is radio station equipment in his apartment. Watkins does not state that such equipment was there without his permission. As a result, they found that Watkins provided services and facilities incidental to the transmission of communications by radio occurring on 106.3 MHz from his home.

The FCC says that it has previously held that liability for unlicensed operation may be assigned to any individual taking part in the operation of the unlicensed station, regardless of who else may be responsible for the operation. This is because Section 301 of the Communications Act says that no person shall use, or operate, radio transmission equipment without an FCC license.

Taken together, the FCC finds that Watkins's actions amounted to willful and repeated violations of the Communications Act and that the $17,000 fine is affirmed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in the newsroom in Los Angeles.

--

Watkins was given the customary 30 days to pay or to file an appeal. (FCC)

**

WITH THE FCC: FCC SEEKS ENGINEERING SCHOOL GRADS FOR EIT

The Federal Communications Commission says it is seeking applications from engineering school graduates with superior academic credentials and an interest in communications engineering. This, for its 2008 Engineer-in-Training Program.

The Engineer-in-Training Program helps the commission recruit new and recent engineering school graduates to the agency and the field of communications. Recent engineering grads and candidates for graduation this spring are invited to apply for openings in the program's 2008 class.

Additional information is available on the FCC's EIT Program page at www.fcc.gov/EITprogram, or by contacting the FCC's Human Resources Office at area code 202 -418-0130. You can also e-mail for more information to recruit@fcc.gov. (FCC)

**

HAM HAPPENINGS: THE K0S STRANGE ANTENNA CHALLANGE

Now here's one that should catch the attention of a lot of you. Erik Weaver N0EW sent along a note to tell us about the upcoming K Zero-S Strange Antenna Challenge slated for Memorial Day weekend, May 24th to the 26th.

What is a strange antenna challenge you ask? According to Erik, its an event where antennas are not permitted to be constructed of wire or metal pipe. Rather, those taking part must use their imagination to design radiators that are untraditional. Erik says that past antennas have included such items as metal folding chairs, chicken wire, fences, ladders, and even a trampoline.

If this sound like a fun way to spend Memorial Day weekend, you can get more information on-line at www.n0ew.org/k0s/ (N0EW)

**

HAM HAPPENINGS: THE WORLD WIDE ATV OPEN HOUSE

The A-T-V Newsletter is putting together a World Wide ATV Open House . In this case ATV means Amateur Television and it will be a virtual open house aimed at getting more members for Amateur Television groups and clubs while making all radio amateurs aware of ATV.

The Open House will run for 24 hours on a date somewhere between September and the first part of December yet to be finalized and will be open to all radio amateurs that want in on the fun. By taking advantage of the Voice over I P technology and the Internet and using streaming communications via Skype, Echolink, and the like, numerous virtual QSO can be made. For more information please e-mail world-wide-atv-repeater-network at hotmail dot com (N6IFU)

**

THE SOCIAL SCENE: AN INVITE TO JOIN THE FLYING HAMS REMAILRT

If you are a ham licensed as a pilot, a student pilot or just interested in aviation, you might want to consider joining the Flying Hams User Group. Formed by Daniel Hileman, N9WX, in Peru, Indiana, the group currently meets only in cyberspace using a yahoogroups remailer. Topics discussed range from technical issues to flight training to discussions of aircraft and the social aspect of both hobbies. To join just send a blank e-mail to Flying_Hams-subscribe@yahoogroups.com (Flying Hams)

**

THE SOCIAL SCENE: LSDXA HAM COM DX DINNER IN JUNE

The Texas-based Lone Star DX Association has announced that Eric Scace, K3NA, will be the keynote speaker for the organizations DX Dinner Banquet at HamCom 2008. Eric Scace was the co-leader of the recent record breaking VP6DX Ducie Island operation. His presentation is long awaited. HamCom is slated for June 13th and 14th at the Plano Center, north of Dallas. More information about the DX dinner and the convention is on line at www.hamcom.org (LSDXA)

THE DIGITALIZATION OF HAM RADIO: NEW DVD ON DIGITAL VOICE MODES FROM ARVN

"Digital Voice for Amateur Radio" is a new DVD designed as a club meeting program to introduce hams to the various digital voice modes now coming to both the High Frequency and VHF bands.

Produced by well known documentary film maker Gary Pearce, KN4AQ, the 60 minute show highlights High Frequency systems such as those from AOR and WinDRM. It also delves into the emerging worlds of APCO P25 and D-Star that are in growing use in the VHF and UHF spectrum.

"Digital Voice for Amateur Radio" is being distributed by the North Carolina-based Amateur Radio Video Network. A free 8 minute preview along with pricing and ordering information is on-line at www.arvidnews.com. Questions go to Gary Pearce by e-mail to kn4aq at arvidnews dot com. (ARVIDNEWS)

**

HAM RADIO IN SPACE: ASTRO HAMS TO BE TRAINED

An Amateur Radio on the International Space Station (ARISS) training session has been planned for astronauts Bob Thirsk, VA3CSA, and Chris Hadfield, KC5RNJ. Hadfield is dual licensed as VA3OOG. The session will take place on Thursday, April 17. Thirsk is a scheduled crew member on Expedition 19 and Hadfield is his back-up. (ARISS)

**

HAM RADIO IN SPACE: WINGS OVER THE ROCKIES AIR & SPACE MUSEUM ADOPTS HAM RADIO

Ham radio is an integral part of the Wings Over The Rockies Air and Space Museum. Amateur Radio, using the call K0WAR has a prominent place in the Denver, Colorado museum with working stations located in the Avionics Room

as well as the Space Station module exhibit.

The museum is Denver's newest historical and educational facility, and is dedicated to education, science, mathematics, technology and the rich history of flight in the Rocky Mountain region. One of its primary missions is to teach the younger generation about the science of aviation and space travel.

With 165,000 square feet in a 1930's-era Air Force hangar, 30 aircraft and special exhibits including Amateur Radio, Wings Over The Rockies is not only Denver's first aerospace museum, it is also the official air and space museum of the State of Colorado. More information about the museum and the part played in it by ham radio is on line at wings.rmhcn.org (KB6CC)

**

WORLDBEAT - BOSNIA: NEW CALL SIGNS ISSUED IN BOSNIA - HERTZEGOVENIA

Hitting the worldbeat, effective as of 23:00 U-T-C on March 21st, hams in Bosnia-Herzegovina were told to begin using their new E7 callsigns. Boris Knezovia, E73TW, says that the country's Communications Regulatory Agency has issued only two and three letter callsigns suffixes. Applications for one letter suffixes can be applied for starting April 14th and hopefully will be issued in late May. The International Telecommunications Union announced last August 8th that they replaced the callsign series prefix block of Bosnia-Herzegovina from T9 to E7. (Southgate)

**

WORLDBEAT - SABLE ISLAND: MAGIC BAND DXPEDITION ANNOUNCED

If you operate on the Magic Band, listen up. A 6-meter DXpedition to Sable Island scheduled to take place from June 25th through July 7th. The Ohio Penn DX Newsletter reports that VE3IKV, K5AND and W3CMP will be active from the rare enclave using the callsign CY0X on both CW and SSB.

Their fixed location 6 meter station will be in grid square FN93. The group will also try to activate rare grid GN03 using the callsign CY0RA if there is a solid opening. For this they are totting along a portable station with a 5 element yagi. In both cases the operators will be transmitting on 50.117 MHz and requests that those they might make contact with not send their grid square as it consumes valuable time during a DX opening.

This CY0X operation will also operate on 20 meters and 40 meter CW and SSB but the High Frequency operation will take lower priority over the 6 meters. QSL's go via VE3IKV and there is more on this upcoming operation is on-line at www.cy0x.com (OPDX)

**

RADIOSPORTS: 2007 FALL SPRINT SCORES NOW ON LINE

Jim Worsham, W4KXY, says that the results for the 2007 Fall Sprints, sponsored by the Southeastern VHF Society, are now available for viewing on line. Jim also says that all of the first, second and third place winners are invited to attend the Southeastern VHF Society conference in Orlando, Florida on April 25th and 26th to receive their award certificates at the Saturday night banquet. Information on attending the conference is available at www.svhfs.org. (W4KXY)

**

DX

In DX, word that ON5AX and ON3AX continue to be active from the Pacific locations on their three month tour. Their next stop is Australia with both operating portable V-K-4 through April 7th. QSL direct to ON5AX or ON3AX.

And here's one that hams all along the North American East coast with 4 meter receive capability might want to listen out for. Sunday 6th April between 09.00 and 12.00 UTC sees the RSGB 70MHz contest. All modes are permitted and the exchange is the normal R-S-T, serial number and locator. While hams this aide of the Atlantic cannot transmit on 70 MHz, they can listen in and use the contest as a propagation study of the 4 meter band.

Thanks to good weather conditions, the ship SA Agulhas has reached Marion Island and Petrus Kritzinger, ZS8T, is now there for at least 12 months. According to announced plans, the science work for the first few weeks will take precedence and ZS8T's activity won't start earlier than the
end of April. This means any station using that call will be a pirate. Once operations are ready to start, an announcement will be made on the ZS8T.net website.

Lastly the 9-X-zero-R operation from Rwanda is now QRT. During the operation The multi-national DXpedition team made just under 63,000k QSO's. Of these about 31,000 of these were on CW, 26,000 on SSB and 4,900 on RTTY. If you worked this one, QSL via EA5RM.

Above from various DX news sources

**

RESULTS OF AR NEWSLINE POLL RESULTS: SHOULD D-STAR REPEATERS OPERATE ONLY IN REPEATER SUBBANDS?

Finally this week, the answer to the survey question that asked if D-Star digital voice repeaters be restricted to operate in the same designated subbands as traditional analog FM. The results were not at all surprising.

83% of those responding wanting D-Star repeaters to be restricted to existing repeater subbands. 17% said its OK for them to operate wherever in a given band that the owner might desire. These results seem to echo what's being read on various VHF and UHF remailers and public posting websites.

There is one caveat to this survey. Of the tens of thousands of you out there with web access, only 324 of you took the time to vote in this one. We have no idea if this means a lack of interest in the mode or that you are not that concerned about band planning. We do thank those of you who took the time to go to www.arnewsline.org to do so. (ARNewsline(tm))

**

THAT FINAL ITEM - APRIL 2008 POLL: GAS PRICES VS. HAMFESTS

Now, we are switching gears for our next on-line survey. According to the Department of Energy, the national average retail price of a gallon of regular grade gasoline now about $3.40. The DoE has also long been hinting that the pre-tax cost could soon exceed $4 a gallon or more. Now, add on federal, state and even local taxes and a gallon could easily hit $4.50. With this in mind, we would like to know how high will the pump price of a gallon of gasoline have to go to keep you from driving that 50 or 60 mile round trip to your favorite hamfest of convention?

Taking part in this survey is easy. Just take your web browser over to www.arnewsline.org. Then scroll down the page until you see the word polls on the left hand side. Then just click on the dollar amount that's closest
to the maximum you would bay for a gallon of gas before leaving the car in your driveway and bypassing this years event. The up to the minute results will be displayed once you have cast your vote.

We will leave this survey on-line through the end of April. Again, that's www.arnewsline.org on the left side of the page under the word polls to make your opinion known on this one. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

==> FOURTEENTH ANNUAL AES SUPERFEST A SUPER SUCCESS

ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, attended the 14th
Annual AES Superfest <http://www.aesham.com/superfest.shtml> at the
headquarters store of Amateur Electronic Supply in Milwaukee, Wisconsin March
28-29. This event is an ARRL sanctioned hamfest that included forums, VE
testing (sponsored by MRAC), DXCC card checking and a fox hunt. ARRL Central
Division Director Dick Isely, W9GIG; Vice Director Howie Huntington, K9KM,
and ARRL Wisconsin Section Manager Don Michalski, W9IXG, were also on hand
```

for the event.

More than 30 vendors made the trek to Wisconsin to show off their wares. "It was fun to visit with all of the AES staff and sales people, too. I enjoyed discussing our new publications, especially the new format of the 'The ARRL Repeater Directory,'" Inderbitzen said.

ARRL Volunteer Counsel Jim O'Connell, W9WU, offered a forum Saturday afternoon -- Legal Issues for Hams -- giving advice for avoiding restrictive antenna covenants, presenting a case for installing a tower (before legislative or zoning officials) and information on the latest court rulings on RFI and PRB-1. ARRL Instructor Gordon West, WB6NOA, presented a forum, encouraging the crowd to recruit, mentor and most of all, have fun!

Inderbitzen heard from many hams while he was at the ARRL booth at Superfest: "Most of the comments I received were very positive. There were lots of nice words about the 'direction' of ARRL, the layout of QST and the one-on-one experiences members have with the ARRL staff and officials. A few folks mentioned having great visits to ARRL headquarters."

On March 27, the night before Superfest, Inderbitzen attended a meeting of the Milwaukee Radio Amateurs' Club (MRAC) and spoke about sharing the passion for Amateur Radio with friends and family members. This club, founded in 1917, will celebrate 90 years of ARRL Club Affiliation in 2009. In recognition of this milestone, Inderbitzen presented MRAC President Howard Parks, AB9FH, with an ARRL Recognition Award "for its commitment to Amateur Radio and to the American Radio Relay League."

==> ARRL RECOGNITION AWARDS AVAILABLE

As a service to its members, the ARRL now offers custom awards for clubs, groups and individuals for recognition and achievement, offering a wide range of styles and price levels. Each award is customized with your text and the ARRL logo. The ARRL has introduced these items in response to requests by members.

Products offered include a tan leather rectangular key fob with a call sign on one side and the ARRL diamond on the other; a rosewood pen and pencil set with personalization available on the pen and pencil, as well as the presentation box; an 8x10 inch wood plaque with blue plate engraved with up to 14 lines of gold text; a swiveling wood desk clock that holds a photo or an insert -- personalize this with up to 25 characters on two lines, and a beautiful crystal 3-inch etched globe on a crystal base, presented in a velvet-lined gift box.

Do you have that one ham in your group who comes out every Field Day, rain or shine, who stays from beginning to end, helping out in any way possible? Acknowledge their involvement with a beautiful gift that shows how much you value their service. What about the ham in your club that has been a member for 25 years and has yet to miss a meeting? Show them how much you appreciate their contribution with a small personalized token. Do you have an Elmer you would like to thank with more than words? A personalized gift with their name and call sign on it would remind them of you every time they use it.

Each item features the ARRL diamond logo. Award orders will be processed and delivered within 20 working days. View the entire award product line, as well as ARRL clothing items, at the Barker Specialties Web site <http://www.barkerstores.com/arrl>.

==> GET READY FOR WORLD AMATEUR RADIO DAY ON APRIL 18

Each year on the anniversary of its founding, April 18, the International Amateur Radio Union (IARU) marks World Amateur Radio Day. On this 83rd anniversary of its inaugural meeting in Paris, the IARU dedicates World Amateur Radio Day to the future of Amateur Radio with its theme, "Amateur Radio: A Foundation for Technical Knowledge."

It is no secret that many professionals in the field of radio, TV, communications and electronics have started their technical education as young radio amateurs. Although Amateur Radio has a different face nowadays -- Digital Communications, Voice over Internet Protocol, Satellite up- and downlinks and more -- it is even of greater value as a foundation for technical knowledge for youngsters. And much more -- it is and should be used as a unique attraction for future young radio amateurs.

World Amateur Radio Day provides an occasion to promote and publicize Amateur Radio. Amateur Radio clubs are encouraged to find suitable ways of celebrating World Amateur Radio Day. Many ways can be considered -- inviting youngsters to visit radio clubs, showing up on the air with a special call sign, organizing a station in a public area with media coverage or publicly honoring amateurs who have made significant contributions. Whatever method is chosen, clubs should think about publishing a press release for the media, giving the background to World Amateur Radio Day and promoting the value of Amateur Radio as a foundation for a technical career.

The ARRL will be very pleased to hear how Amateur Radio clubs chose to celebrate World Amateur Radio Day. Share your stories and photos with us, so that they may be shared with the Amateur Radio community. E-mail your submissions to ARRL Affiliated Club/Mentor Program Supervisor Norm Fusaro, W3IZ <clubs@arrl.org>. Please be sure to put "World Amateur Radio Day" in the subject line. -- Information provided by IARU

==> ARRL COMPILES COMPLETE WORKS OF LARSON E. RAPP, WIOU

Thanks to the efforts of ARRL volunteer Bob Allison, WB1GCM, the League has assembled the complete known works of noted QST author Larson E. Rapp, WIOU <http://www.arrl.org/tis/info/larson/>. Rapp's remarkable contributions spanned a period of more than three decades (1941-1962, 1972), primarily during the month of April. Rapp was said to be from Kippering-on-the-Charles, Massachusetts, just off Route 128.

"Like most visionaries unafraid of pushing technology beyond conventional limitations, Larson at times was controversial among his peers and contemporaries," ARRL Lab Engineer Mike Gruber, W1MG, said. "You can now be the judge of just how well Rapp's theorems and trademark 'radical approach' have withstood the test of time."

The first Rapp article, "Putting Dynamic Prognostication to Work," appeared in the April 1941 issue of QST. In the article, Rapp expounded on his efficient one-tube transmitter. When Rapp discussed the tuning of the transmitter, he said, "The high coupling efficiency of the unit results in a minimum plate current of resonance of about 0.9 ma. at 7 Mc. This is too low a value to show on the 0-250 milliammeter that should be used for the circuit, so you'll have to take our word for it." The transmitter was described as having a "simple construction of the chassis which is made from cardboard fastened by wire staples and glue. The underside is covered with tin foil."

In "The Circular Band Theorem: Operational Advantages of Concentric Frequency Allocations" [April 1946], Rapp theorized if the FCC assigned "amateur frequencies in concentric circles instead of bands [the end result would be] the consequent elimination of out-of-band operation and band edge crowding...[making] it possible to work someone 40 or 50 kc. removed from one's frequency." This was brought on by Rapp's claim that amateurs, "realizing that after calling 'CQ' they had to start listening somewhere and that somewhere was usually the edge of the band." Rapp called for bands to be designed in "concentric circles, and the beginners should be encouraged to start in the smallest circle. Thus, even if one managed to get out of band -- we don't see how he could, but someone would find a way! -- he would still be inside the next circle and amateur radio would have no black mark against it for out-of-band operation. Further, the fact that a beginner was encouraged to start in the
inner circle would make him feel like he was one of the boys right off, being allowed into the inner circle!"

In the April 1960 issue of QST, a phony full-page ad announced the formation of "Larsen E. Enterprises, Inc," supposedly off Route 128 in Kippering-on-the-Charles, Massachusetts, with Larsen E. Rapp as president. Bearing a "Not a Advertisement" disclaimer, the ad offered customers free access to the company's air-conditioned "Wonder Workshop" with each kit purchase. "If you don't have the time to assemble the entire kit yourself, one of our engineers will be glad to do it for you, just for the pleasure it gives him," the ad promised. "No tipping please." In the "Print Shoppe," customers could purchase "authentic reproductions of the rarest QSL cards in the world." The price included having the company's "patient penman" fill in the card with your call sign and a signal report, duplicating the original ink and handwriting.

Rapp himself said that "In assembling this list of my articles and letters over the years, I noticed that QST always chose to publish them in the springtime. This practice was especially meaningful to me as spring has historically been a time of new beginnings and in our radio hobby, a time for new insights into old technical problems. I hope you, too, will be helped and inspired by these writings of an old ham."

==> ANNUAL ARMED FORCES DAY CROSSBAND TEST SCHEDULED FOR MAY

The Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military/Amateur Radio communications tests in celebration of the 58th anniversary of Armed Forces Day (AFD). Although the actual Armed Forces Day

is celebrated on May 17, the AFD Military/Amateur Crossband Communications Test will be conducted on May 10 to prevent conflict with the Dayton Hamvention, scheduled for May 16-18.

The annual celebration features traditional military to amateur crossband communications SSB voice tests and copying the Secretary of Defense message via digital modes. These tests give Amateur Radio operators and short wave listeners an opportunity to demonstrate their individual technical skills and to receive recognition from the Secretary of Defense and/or the appropriate military radio station for their proven expertise. QSL cards will be provided to those stations making contact with the military stations. Special commemorative certificates will be awarded to anyone who receives and copies the digital Armed Forces Day message from the Secretary of Defense.

Look for schedules and frequencies of participating military stations to be published in May on the Army MARS Web site <http://www.netcom.army.mil/MARS>.

==> 2008-2009 ARRL REPEATER DIRECTORIES NOW SHIPPING

With more than 20,000 listings for VHF/UHF repeaters across the US and Canada, "The ARRL Repeater Directory 2008-2009" is a must have. Once again, the ARRL is offering two sizes of the "Repeater Directory" -- pocket size <http://www.arrl.org/catalog/?item=1271> and desktop <http://www.arrl.org/catalog/?item=1298>.

This year, not only is the pocket-sized Repeater Directory a half-inch larger than previous editions, it boasts a larger font size, making for easier reading. For the first time ever, this year's editions feature handy indexing tabs on the cover, easier to read listings and a "Key to Repeater Notes" located right up front in the Directory.

Along with these new features, both editions have the features you know and enjoy from prior years: Repeater operating practices, repeater lingo and hints for newly licensed hams; Frequency Coordinator contact information; listings for D-Star and APCO 25 repeaters; a guide to using CTCSS tones and Digital Coded Squelch (DCS); VHF/UHF band plans and a 2 meter channel-spacing map; IRLP (Internet linked) nodes; tips for handling interference; listings for IRLP, WIRES-II and EchoLink (Internet linked) nodes; emergency message handling procedures, and a transceiver memory log.

Order your copy of The ARRL Repeater Directory 2008-2009 today at the ARRL Online Store <http://www.arrl.org/catalog/?category=What's%20New>.

==>SOLAR UPDATE

Tad "Who bade the Sun clothe you with rainbows" Cook, K7RA, this week reports: The past few days have had very stable geomagnetic conditions. After unsettled to active geomagnetic indicators on March 26-28, conditions quieted down dramatically. Combined with the nearly two-week run of sunspots and the spring season, this makes good HF conditions. There were actually three sunspots, beginning on March 23 with the first one and a sunspot number of 14. March 24 and 25 each brought one new spot; the sunspot number rose to 35 and 52 on those days. Activity peaked between March 26-29 with daily sunspot

numbers of 63, 57, 63 and 50. Yesterday, April 3, the sunspot number was back to 14 again, as one-by-one, the three spots drifted from view. Today's sunspot number may be back to zero, and it may stay that way until April 18-20. Sunspot numbers for March 27 through April 2 were 57, 63, 50, 41, 45, 25 and 24 with a mean of 43.6. The 10.7 cm flux was 84.8, 82.9, 82.6, 80.5, 79.2, 77.8
and 75.9 with a mean of 80.5. Estimated planetary A indices were 31, 21, 8, 8, 4, 4 and 1 with a mean of 11. Estimated mid-latitude A indices were 19, 13, 6, 6, 2, 5 and 1, with a mean of 7.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you courtesy of Samuel Taylor Coleridge.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the YLRL DX-YL to NA-YL Contest (CW) on April 4-6. The SP DX Contest, the EA RTTY Contest, the QCWA Spring QSO Party, the Missouri QSO Party and the Yuri Gagarin International DX Contest are all on April 5-6. The RSGB RoPoCo 1 is April 6, the RSGB 80 Meter Club Championship (CW) is April 7, the ARS Spartan Sprint is April 8 and the NAQCC Straight Key/Bug Sprint is April 9. The CQ WW WPX Contest (SSB) is March 29-30. Next weekend is the LRL DX-YL to NA-YL Contest (SSB) on April 11-13. The EU Spring Sprint (CW) is April 12. The JIDX CW Contest, Radio Maritime Day and the Georgia QSO Party are April 12-13. Be sure to check out the SKCC Weekend Sprintathon and the UBA Spring Contest (SSB) on April 13. The RSGB 80 Meter Club Championship (SSB) is scheduled for April 16. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contes
t Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 20, 2008, for these on-line course sessions beginning on Friday, May 2, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well a
s providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course

Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that DXCC has completed processing applications for 2007. As such, St Barthelemy (FJ) has been added to the DXCC computer system and Logbook of The World <http://www.arrl.org/lotw>. With the addition, this moves the #1 Honor Roll position to 338 current entities; operators now need 329 entities to qualify for Honor Roll. ARRL "While DXCC has completed applications for 2007, there are a number of application returns still being mailed, so it may be another 2-3 weeks before applicants receive their 2007 return," Moore said. "LoTW is now accepting certificate requests for St Barthelemy; once those logs are submitted, the matches should occur and applicants can claim DXCC credit." For programmers who use the DXCC entity numbering system, the entity code for St Barthelemy is 516. Moore also noted that the 2007 G4GIR/KH9 DXpedition to Wake Island has been approved for DXCC credit: "If you had cards rejected for

this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> to have your DXCC record updated."

* Hams Come to Rescue in Utah: Eldon Kearl, K7OGM, of Fish Haven, Idaho, was driving in the Logan Canyon, Utah area last week when he came upon a driver who lost control of her truck in the snow. Her truck fell more than 100 feet over a cliff, and two of the three passengers were thrown from the truck. Witnesses tried to call for help on their cell phones, but the closest cell coverage was more than a 30 minute drive away. Kearl, however, had a radio in his car and was able to get a hold of another ham, Roger Ellis, KE7HTE, of Logan, Utah. Kearl relayed to Ellis information about the accident scene and Ellis called 911. First responders were on the scene within half an hour. Although the driver and passengers in the truck suffered only minor injuries, a spokesman for the Utah Highway Patrol said that if Kearl and Ellis had not responded in getting help so quickly, the injuries could have been much worse. As Kearl said, "It all worked out pretty good." Kearl and Ellis have nev
er met, but live relatively close to each other; they plan on meeting each other in person soon. -- Information provided by KSL-TV, Salt Lake City, Utah

* Dick Jansson, KD1K, Wins March QST Cover Plaque Award: The winner of the QST Cover Plaque Award for March is Dick Jansson, KD1K, for his article "HF Antennas and Restricted Living." Congratulations, Dick! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the April issue by Wednesday, April 30.

* Exhibit Kits Available for Field Day: Visit the ARRL Field Day information page <http://www.arrl.org/fieldday> for all the details on Field Day rules, frequencies, forms, pins, logos and T shirts. The complete Field Day packet <http://www.arrl.org/contests/forms/fd-2008-packet.pdf> can be downloaded from the site as well. If you have unanswered questions about Field Day, contact ARRL Field Day Manager Dan Henderson, N1ND, via e-mail <fdinfo@arrl.org> or by phone at 860-594-0236. If you want to order exhibit kits containing printed flyers about Amateur Radio, you may order these

materials on the ARRL Web site <http://www.arrl.org/brochures/>. The cost of the exhibit kits ranges from $8-$12 depending on shipping. To make sure you'll have the display material in time for Field Day, your order must be received before June 13. ARRL Field Day is always the fourth full weekend in June; in 2008, it is June 28-29.

* Field Day Station Locator Up and Running: This year, for the first time, the ARRL has put together a Station Locator <http://www.arrl.org/contests/announcements/fd/locator.php> to help amateurs or those interested in Amateur Radio find a Field Day <http://www.arrl.org/contests/announcements/fd/> site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years: "So far, 287 groups in 45 states and 3 Canadian provinces had registered their Field Day site with the Station Locator." If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

* Transatlantic Balloon to Launch this Weekend: The trans-Atlantic balloon flight of the Spirit of Knoxville V is set to launch April 5 at 2000 EDT (0000 UTC April 6). The balloon, designed to stay aloft for more than 24 hours, will be inserted into the current jet stream at normal flight altitudes of 30,000-40,000 feet. This will take the balloon into Europe over the UK and France at around 40 hours into the flight if all goes well. Using radio frequencies, the balloon transmits data detailing its current location, distance traveled, speed, height and health of the balloon. Last month, the Spirit of Knoxville IV made two-thirds of its journey and crossed the tectonic plate to Europe; organizers hoped the balloon would make to Europe, but after 40 hours and 3300 miles, the balloon lost altitude and went into the ocean as it neared Ireland. The balloon's payload consists of hand-made computers and radios along with a GPS and self-authored software. The onboard computer gathers
information from the GPS like altitude, speed and temperature; the computer then determines whether it needs to drop weight to maintain its altitude and sends this information, via Amateur Radio frequencies, to volunteers around the globe. Track the mission live (the live status page will only become active at launch). See the Spirit of Knoxville Web page <http://www.spiritofknoxville.com/> for more information.

* Tim Hulick, W9QQ (SK): ARRL has learned that Tim Hulick, PhD, W9QQ (ex W9MIJ), Captain, USNR retired, of Schwenksville, Pennsylvania, passed away December 28, 2007 after a lengthy battle with cancer. He was 65. Hulick, an ARRL Life Member, also held the calls V47QQ, KG4QQ, HL9QQ and PJ9Q. A 1964 graduate of the US Naval Academy, Hulick served his country for 29 years. Upon retiring from the Navy, he operated Watts Unlimited, producing a lightweight HV Power Supply designed for use as a replacement in older amplifiers. Hulick wrote several articles for QST and QEX, including "Switching Power Supplies for High Voltage" (QEX, February 1991), "PSK31 on the Road!" (QST, March 2000), and "A Two-Element Vertical Parasitic Array for 75 Meters" (QST, December 1995). Hulick was on the ARRL DXCC Honor Roll with 356 countries; he only needed BS7, but was too sick to mount a serious effort

to get them while it was most recently on the air. He worked more than 230 counties while mobile.
He also operated /MM from a number of ships during his Naval career. Hulick was buried with full military honors at Arlington National Cemetery. He is survived by his wife JoAnne, three sons, a daughter and several grandchildren.

* Des Moines Hamfest Location Update: The Des Moines Radio Amateur Association (DSMRAA) will hold their hamfest on April 27 at the 92.5 KJJY Event Center, located at 2100 NW 100th Street in Clive, Iowa. The April issue of QST inadvertently stated the hamfest would be held at the Iowa State Fairgrounds.

* Belgian Satellite to Feature D-STAR Technology: Students at the Universite de Liege in Belgium have built OUFTI-1 <http://www.leodium.ulg.ac.be/cmsms/>, a new Amateur Radio CubeSat featuring D-STAR digital-communication protocol that is used for control and telemetry. Amateur Radio operators from all over the world are able to listen in on the ON0ULG D-STAR repeater on 70 cm <http://www.jfindu.net/dstarlh.aspx?rptr=ON0ULG>; 2 meters will be operational soon. The objective of this nanosatellite project is to provide hands-on experience to students in the design, construction and control of complete satellite systems, ultimately serving as the basis for a variety of space experiments. The first satellite in the series, OUFTI-1, is a CubeSat -- a 10ï¿½10ï¿½10 cm cube weighing in at no more than one kilogram. -- Information provided by the OUFTI Team

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:

ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I remember an article, probably April '55, where
Rapp described a method of "amplitude discrimination".
If one used such a method, one could simply tune
in the weak signal by tuning out the strong ones.
Such amplitude discrimination required "back to
back limiters". When I asked my Elmer, W5OLV, how
to build a "back to back limiter", he couldn't stop
laughing.

And I remember one solution of his to TVI was to "find seats for the
standing waves...."

Those were the days. It would be the ultimate joke on us if someone
really was going to publish the "collected works".

Well, they're all on the website! Not limited to members-only, either.

The article to read, though, is the one about the QS-59 receiver. Many of the features described are common in today's rigs.

Ya know...

It's not just the ARRL that has fun with this kind of thing. CQ
Magazine has a few articles in it this month that are very much in the
4/1 spirit. A Cray based CW contest simulator which will run all the
CW contests off the air by 2011? I have to admit that it sounded good
until you started thinking though the details and reading the supposed
names of those involved. It would *almost* work?

There was another article that was a bit more overt, I just don't
remember exactly what it was about.

I have to admit though, the ARRL's "finding of the bad coax jumper and
that's why propagation is so bad" thing was a funny one. They had me
reading along wondering what all the homeland security stuff was going
to be and before I really got the joke I'd read almost half. Classic
way to write these things. You simply start to run off the rails of
reality a little at a time, throwing in enough truth to distract the
reader until as close to the end as possible. Truly good ones leave
just about everybody wondering if it's true or not.

I remember The Invisible Antenna article by the Oberlin College
Prof. [QST] and 73's "How to turn your [WW2] Command Set into a 5 Band
250 Watt SSB Tranceiver" article. The instructions were easy to follow:

a) First, remove all components except for the fuseholder in the
upper right hand corner.

cont. on page 98

Of course, the magazine had 96 pages total...

Hamventionï¿½ Names 2008 Award Winners

DAYTON, OH -- Three amateur radio (ham) operators who have made significant contributions to the Amateur Radio Service, will be honored guests when Hamventionï¿½ 2008 opens in Hara Arena on May 16. Recipients of this year's Hamventionï¿½ awards are Ward Silver, N0AX, whose books and teaching materials have helped many become hams; Tom McDermott, N5EG, whose technical contributions helped digital ham radio expand; and Emery McClendon, KB9IBW, who started Amateur Radio Military Appreciation Day (ARMAD) in 2003 as a way for Amateur Radio to express support and appreciation for our service men and women.
Frank Beafore, WS8B, Hamventionï¿½ Awards Chairman said selecting the winners from the number of worthy nominees presented a tough task for the committee. "We believe the winners all have made significant contributions to the ham radio community. We were impressed with the quality of the nominations."
Hamventionï¿½ Chairman Carl Rose, K8CPR, praised the winners, saying: On behalf of the Dayton Amateur Radio Association (DARA) and Hamventionï¿½ 2008 it is my pleasure to congratulate this years Award Winners. I ask all hams to join me in recognizing the outstanding contributions and the many years of service the winners have given to the amateur radio service."
Ward Silver, was named Amateur of the Year for his many contributions including Ham Radio for Dummies, his first effort to show that becoming a ham does not have to be a difficult challenge. His additional books, magazine articles and his Hands On column in QST have all helped many hams develop their knowledge and skills. Though he has been honored for his efforts, including receiving the Bill Orr Technical Writing Award from the ARRL, he said, "The best reward, though, is hearing from readers that have found my writing helpful in understanding some aspect of

electronics or radio."
He was first licensed at age 17 in 1972 as WNï¿½GQP, and
upgraded to Extra and Nï¿½AX in 1975. A contester and DXer he appears in
the
DXCC Honor Roll, lots of contest Top Ten boxes, and on a few record lists.
While living on Vashon Island, near Seattle WA, he worked
closely with community leaders and the Vashon-Maury Island Radio Club
(W7VMI) to provide effective emergency communications. Working together,
the fire district, CERT, and radio club members have created one of the
best local communications systems in the state of Washington.
He continues to pursue a variety of writing and editing
projects with the ARRL, such as the training manuals for all three license
classes and the ARRL Contester's Rate Sheet biweekly newsletter read by
nearly 17,000 subscribers. He said, "Ham radio continues to open doors for
me and I am honored to enjoy the friendship of my many ham radio friends in
every corner of the globe."
Emery McClendon, KBPIBW, received the Hamvention award for
Special Achievement for his efforts starting ARMAD or Amateur Radio
Military Appreciation Day in 2003. He said he started ARMAD "as a way to
have Amateur Radio serve as a tool for the people of our communities to be
able to express 'live' support and appreciation for our Troops, Veterans,
Military Retired; and First Responders." The event has become popular and
spread to other communities. Several Military Support Groups have developed
an interest in having Amateur Radio as a part of their activities. This
resulted in Amateur Radio being introduced to thousands of people worldwide
that otherwise would have never known about our public service.
McClendon, a native of Fort Wayne, Indiana, who became an
Amateur Radio Operator 16 years ago. His interest in organizing Military
Special Events came from his four years of service in the U.S. Air Force,
and two years in the Indiana Air National Guard. In 2001 he was asked to
make Amateur Radio a part of The Vietnam Wall Experience for the City Of
Fort Wayne, and in 2003 was asked to organize Amateur Radio into the Fort
Wayne Glen Beck Rally For America. The events went so well that he was
asked to organize Amateur Radio for the National Rally For America held in
Huntington, West Virginia.
He is active with two local Amateur Radio Clubs, and with
giving presentations about Amateur Radio to community groups. His
activities, including ARMAD, have resulted in many TV, Radio, and media
stories over the past five years giving Amateur Radio community exposure.
The Hamvention Technical Achievement Award goes to Thomas C.
McDermott, N5EG, for his more than 20 years of involvement in projects
which further the development of amateur radio. He co-developed the TexNet
packet switching network in 1986, based on datagram routing. In the 1990s
it covered much of the south central United States. He was the founder of
the Texas Packet Radio Society. In 1994 he developed the TAPR-AMSAT windows
software development system for the DSP-93 modem, including software-based
instruments (oscilloscope, spectrum analyzer, signal generator). In 1996 he
wrote a textbook on Wireless Digital Communications for TAPR, and developed
the TAPR VNA in 2004. These projects provide an on-going revenue stream
for TAPR to help fund other activities and development projects. Tom

received the ARRL technical excellence award in 2005, and is a life member of the ARRL.
He enjoys operating RTTY and an occasional contest. He is married and lives in Medford, Oregon. Hamvention, the worlds largest amateur radio gathering, brings more than 20,000 people to the greater Dayton area each year. The three-day event includes exhibits, a flea market, forums and education sessions.
For more information about Dayton Hamvention 2008 (scheduled for May 16-18), visit the website at <http://www.hamvention.org/>www.hamvention.org or e-mail <http://www.daytoncvb.com/newsletters/mailtmedia@hamvention.org>media@hamvention.org.

==> OHIO ARES TEAMS LEND SUPPORT TO HEPATITIS VACCINATION CLINIC

When news of a hepatitis A outbreak alarmed residents of West Chester, Ohio last month, local officials sprang into action to inoculate more than 1200 people who had eaten at a local fast food restaurant; an employee with a confirmed case of the virus worked at the restaurant in March may have contaminated ice and other food items, health officials said. Inundated with more people than expected, Butler County Health Department and Emergency Management officials were overwhelmed with traffic, communication problems and general logistics of the event. When a second hepatitis A vaccination clinic was scheduled for April 5,

officials called on local Amateur Radio operators to assist with communications, as well as traffic and crowd control.

"After the first vaccination clinic was swamped with people coming to get their shots, both the Board of Health and the Emergency Management Agency in Butler County realized they needed assistance," said ARRL Ohio Section Emergency Coordinator Frank Piper, KI8GW. "They had the super idea of bringing in the local ARES group and called on District Emergency Coordinator Robert Spratt, N8TVU, to organize some hams to come help out."

According to Spratt, officials at the first clinic could not communicate on their cell phones due to lack of coverage in the area. "Officials had only planned for about 800 people to show up to get inoculated. When they had more than 1200 people show up, they tried using their cell phones to call and get more vaccine, but they just wouldn't work." Calls made to 911 for police back-up to deal with unruly persons also had trouble getting through, Piper said.

Ohio has a statewide, secure, reliable public service wireless communication for public safety and first responders in place -- MARCS -- used by Emergency Management officials in times when traditional communications systems fail. "When Butler County officials tried to use it at the first clinic, the system displayed 'OUT OF RANGE' or 'NO SIGNAL' messages on every channel," Piper said.

At the second clinic, eight hams from both Butler County and Hamilton County were on site and ready to assist. The clinic, located at a church, was scheduled to run from 10 AM-4 PM. The hams were ready for early crowds; at the first clinic, people were standing in line more than two hours before the doors opened.

"When the ARES team arrived, they established the parking lot area, the traffic flow patterns into and out of the church area and set up the required communications," Spratt said. "ARES members canvassing the complex discovered several other events were ongoing at the facility, including a funeral, fingerprinting for youth sports, a planning meeting for a summer carnival and a planning meeting for the upcoming soccer season. Soccer practice also added to the traffic and pedestrian congestion."

More than 225 people received hepatitis A vaccinations at the second clinic and ARES members directed more than 1200 cars to their correct destinations on the property. The Butler County Health Department officials, clinic staff, the Butler County Emergency Management Agency, the West Chester Police Department and church officials thanked the ARES team for a job well done, all without any reported incidents. Spratt said that the Ohio District 4 ARES teams in Warren, Clermont, Hamilton and Butler counties have had prior Volunteer Reception Center and vaccination clinic operation training that "helped greatly in understanding and knowing what would be needed in the way of communications at the clinic, as well as security, traffic control and

crowd control."

Spratt said that people coming to get inoculations "asked about who we were and who we were working for. We made some new friends in the community and recruited three or four people for the upcoming Technician classes. They thought what we were doing as volunteers was great and they want to become part of the team."

Piper concurred with Spratt. "In the Ohio Section, we have the Ohio Section Emergency Response Plan (OSERP) <http://www.trac-online.org/Docs/oserp.pdf>. This is a small document compared to some ERPs I have seen. This document outlines how ARES is activated in the Section, who reports to whom and how communication flows. DEC Spratt and his team followed the OSERP pretty much to the letter, and it worked well. Many ARES districts have participated with their Regional Medical Response Systems in their assigned districts on tabletop exercises, as well as actual call-up drills. In February, District 3, under the command of ADEC Fred Stone, W8LLY, conducted a Pandemic Flu activation that extended over several days in February, including a real-time snow storm which affected the drill. This vaccination clinic this past weekend proves to all of us that ARES is vital to the emergency medical community."

According to the Centers for Disease Control, hepatitis A is a viral infection that attacks the liver and is spread primarily by close person-to-person contact or by consuming contaminated food.

==> ARRL EXPO AT DAYTON HAMVENTION -- THE COUNTDOWN IS ON!

With just over a month to go, the final details for the ARRL EXPO at the 2008 Dayton Hamvention <http://www.hamvention.org/> are wrapping up and the secrets are being let out! This year's EXPO is meant to not only share in, but to embrace the Dayton Amateur Radio Association's (DARA) -- host of Hamvention -- theme of "Amateur Radio + People = Fellowship" <http://www.w8bi.org/>. With more open-air areas and interactive booths within the ARRL EXPO, we hope to not only convey this message but provide easier opportunities for fellowship within the EXPO, offering more opportunities for interaction with the ARRL family. The Dayton Hamvention will be held May 16-18 at Hara Arena.

ARRL Membership Manager Katie Breen, W1KRB, is overseeing the ARRL EXPO at Hamvention. "A new area within the EXPO this year is the ARRL Movie Room," she said. "We decided to try something a little different this year and create a cozy area to sit back and relax and watch a movie on the 10-foot screen. We are very pleased that Bob Allphin, K4UEE, Peter I participant and producer of the DXpedition video, will be a featured guest on Saturday in the movie room. This will be a unique opportunity to come and meet Bob, listen to additional commentary on the many DXpeditions he has been on and have some personal time to ask your questions about going on a DXpedition." Allphin has visited 93 DXCC entities, operated from 50 and been on 33 DXpeditions, of which 6 set world records. He took 5th place at the 1996 WRTC with teammate James

Pratt, N6IG.

Breen said that the Youth Lounge, organized by 2007 Goldfarb Memorial Scholarship recipient Andrea Hartlage, KG4IUM, will be up and running again this year. "With a bevy of activity for our young hams, the youth lounge is a full scale version of what every club and group can do to entice young hams to their events. This is a perfect opportunity to visit Andrea and the other volunteers in the areas and bring back ideas to your home clubs."

The 2008 Youth Dinner will also be on Saturday night, but with one change: Instead of being at a local restaurant, it will take place at the DARA clubhouse. Breen said, "We're very excited by the generosity the DARA Board of Directors has shown to us. They let me know that the restaurant we've used the past couple of years for the youth dinner had gone out of business. So while I was searching for a new location, the DARA Board was meeting and decided to offer their clubhouse to the kids." Hartlage said she was thrilled with this option this year. "Not only can we enjoy a great pizza party at the clubhouse, but we can even have time to get on the air together! I'm so thankful to DARA for stepping up and helping us out in such a generous way."

Breen followed up, saying, "DARA's theme of fellowship extends into the EXPO area with their partnership with us, including a new area within EXPO that will be dedicated to the newer operators and future hams."

==> KANSAS BECOMES 26TH STATE TO HAVE PRB-1 LAW

After an unsuccessful attempt eight years ago to get a PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1.html> type bill signed in Kansas, radio amateurs in that state have succeeded in becoming the 26th state with a PRB-1 law on the books. Kansas Governor Kathleen Sebelius signed HB 2805 <http://www.kslegislature.org/bills/2008/2805.pdf> into law on April 9. The bill, written by Rep Arlen Siegfreid (R-15), passed unanimously in both the Kansas House of Representatives and Senate. It takes effect July 1, 2008.

Known as the "Kansas Emergency Communications Preservation Act," the new law concerns federally licensed Amateur Radio Service communications. According to the governor's office, the law "prohibit[s] a city or county governing body from taking any action that precludes federally licensed amateur radio service communications, or that does not conform to federal regulations related to amateur radio antenna facilities."

The new law states that if a municipality takes any action that regulates the placement, screening, number or height of a station antenna structure, the action must "Reasonably accommodate federally licensed amateur radio service communications; and constitute the minimum regulation practicable to carry out the legitimate purpose of the governing body." Antenna support structures constructed prior to the bill's effective date "are exempted from subsequent changes in zoning

regulations...and may be repaired as required."

JD Spradling, KC0NYS, of Olathe, Kansas, is chairman of the committee <http://www.hamsforkansas.org/> that led the charge to get a PRB-1 law on the books in that state. He commented: "Many local zoning boards don't give FCC regulations adequate consideration when making zoning decisions and across the country amateurs have found that state laws are a more effective tool for influencing local zoning regulations. So beginning in the 1990s, amateurs began lobbying for legislation that would place PRB-1-type language into their state laws."

Upon hearing the news that Governor Sebelius signed the bill into law, Spradling said, "This venture has been successful because we have had a great team effort all the way through the process, from all who stepped up -- from our state and local representatives, to our subject matter experts and the PRB-1 Committee members from Miami County, Kansas, as well as everyone else who had been proactive in the 2008 Kansas Legislative process for your fellow hams."

==> SPECIAL EVENTS TO COMMEMORATE 96TH ANNIVERSARY OF TITANIC TRAGEDY

Several Amateur Radio special event operations are scheduled to mark the 96th anniversary of the sinking of the RMS Titanic. The "unsinkable" White Star Line passenger vessel was on its maiden voyage from Liverpool, England, to New York City when it struck an iceberg and sank early on April 15, 1912. More than 1500 people perished, while some 700 passengers in 19 lifeboats were rescued by the RMS Carpathia, whose radio operator copied the frantic distress call (the still common "CQD" signal, possibly coupled with the then-new "SOS") transmitted by MGY radio operator Jack Phillips as the Titanic foundered.

Special event W0S <http://www.wzeros.com/W0S_Special_Event.html>, which stands for "White Star Line," will be on the air from the Titanic Museum in Branson, Missouri <http://www.titanicbranson.com/>. The W0S operation will commence at 1300 UTC on Saturday, April 12, and conclude at 2400 UTC on Sunday, April 13. Members of the Nixa Amateur Radio Club and the Southwest Missouri Amateur Radio Club (SMARC) will be among those at the helm of W0S. Icom, Vibroplex, MicroLog, Rayfield Communications and MFJ are corporate sponsors for the event.

Look for W0S on or around these frequencies: SSB, 3.850, 7.250, 14.250 and 21.350 MHz; CW, 3.550, 7.050, 14.050 and 21.050 MHz; PSK, 80 and 40 meters only. Operators will be listening 3 kHz up for calls. There will also be activity on D-STAR, EchoLink and IRLP; please check the event's Web page for information concerning these frequencies. Visitors are welcome. E-mail the Nixa club for more information <titanichams@wzeros.com>.

Special event station W1MGY will be on the air from the Titanic Historical Society Museum in Indian Orchard, Massachusetts. Operation will concentrate on 20 and 40 meters April 11-12 from 1400 UTC until 2030 UTC each day, although W1MGY may be on the air at other times,

bands and modes throughout the 96th anniversary weekend.

Look for W1MGY on or around: CW, 3.533, 7.033, 14.033, 18.099, 21.033 and 28.033 MHz; SSB, 3.860, 7.260, 14.260, 18.160, 21.360 and 28.336 MHz, conditions permitting.

To schedule a contact with W1MGY, contact Dave Isham, KB1MU <kb1mu@charter.net>, indicating a preferred date, time and frequency. Include a self-addressed, stamped envelope with QSL requests to Titanic Historical Society, W1MGY, PO Box 51053, Indian Orchard, MA 01151-0053.

==> 2008 ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE: CALL FOR PAPERS

Technical papers are solicited for presentation at the 27th annual ARRL/TAPR <http://www.tapr.org/> Digital Communications Conference (DCC), Friday-Sunday, September 26-28, in Chicago, Illinois <http://www.tapr.org/dcc.html>. Papers will also be published in the Conference Proceedings. Authors do not need to attend the conference to have their papers included in the Proceedings. The submission deadline is July 31.

The ARRL/TAPR Digital Communications Conference is an international forum for technically minded radio amateurs to meet and present new ideas and techniques. Paper/presentation topic areas include -- but are not limited to -- software defined radio (SDR), digital voice, digital satellite communication, digital signal processing (DSP), HF digital modes, adapting IEEE 802.11 systems for Amateur Radio, Global Positioning System (GPS), Automatic Position Reporting System (APRS), Linux in Amateur Radio, AX.25 updates and Internet operability with Amateur Radio networks.

Submit papers to Maty Weinberg, KB1EIB, ARRL, 225 Main St, Newington, CT 06111 or via e-mail <maty@arrl.org>. Papers will be published exactly as submitted, and authors will retain all rights. ARRL will provide additional information on the 2008 DCC as it becomes available.

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Edward R. Drone, W0NYF, of Sycamore Hills, Missouri alerting him that "the trustee of the St. Louis and Suburban Radio Club repeaters K0STL (146.940 MHz), N0TYZ (146.910 MHz), W0FF (146.970 MHz) and W0SRC (146.850 MHz) has requested in writing that you refrain from use of the repeaters." These requests, the Commission, noted, were due to Drone's "failure to follow operational rules set forth by the licensee/control operators of the repeaters for their users." Hollingsworth reminded Drone about a past conversation they had in which Drone "acknowledged that [he] had been directed to stay off of the repeaters and stated that [he] would comply," but, according to the Warning Notice, Drone "utilized the K0STL repeater on March 31, 2008 and stated that [he] would not refrain from using it." Drone was told he was expected "to abide by the request to stay off of the above-listed repeaters and any other such request by a repeater

licensee, control operator or trustee." Drone was warned that the FCC would initiate enforcement action against his license -- which could include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate W0NYF." Fines normally range from $7500-$10,000.

Hollingsworth also sent a Warning Notice to David R. Henry, W2DRH, of Cuddebackville, New York alerting him that "the K3TSA repeater system operating on 145.350 MHz has requested in writing that you refrain from use of the repeater." These requests, the Commission, noted, were due to Henry's "failure to follow operational rules set forth by the licensee/control operators of the repeater and FCC rules." Hollingsworth reminded Henry that the trustees had "previously requested verbally [to Henry that he] refrain from using the system, but [Henry has] apparently ignored both verbal and written requests." Hollingsworth also noted that Henry "complained that on February 13, 2008, the control operator of the K3TSA repeater shut down the repeater while [he was] engaged in emergency communications. [Henry] had previously been warned not to use the repeater and, moreover, three of the five control operators of the K3TSA repeater witnessed the communications and reported that there was no emergency situation." Henry was warned that the FCC would initiate enforcement action against his license -- which could include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate W2DRH." Fines normally range from $7500-$10,000. Hollingsworth also pointed out that Henry's Amateur Radio license was set to expire on April 21, 2009. "Please be advised," Hollingsworth said, "that your license will not be routinely renewed unless this matter is resolved."

Hollingsworth sent a Warning Notice to non-licensee residential owners concerning interference from a flat screen television unit to a licensed amateur in Edgewater, Florida.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "Unless to see my shadow in the Sun" Cook, K7RA, this week reports: As of Thursday, April 10, there have been no sunspots for seven days. We may see sunspots return around April 21-28. This is based on recent activity rotating out of view around the Sun and (we hope) reappearing later this month. The predicted solar flux remains at 70 until April 20 when it reaches 75, then 80 on April 21. The predicted higher solar flux should correlate with the return of sunspots. Geophysical Institute Prague predicts quiet to unsettled conditions April 11, quiet April 12-13, quiet to unsettled April 14, unsettled April 15, quiet to unsettled April 16 and back to quiet on April 17. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's

Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is the YLRL DX-YL to NA-YL Contest (SSB) on April 11-13. The EU Spring Sprint (CW) is April 12. The JIDX CW Contest, Radio Maritime Day and the Georgia QSO Party are April 12-13. Be sure to check out the SKCC Weekend Sprintathon and the UBA Spring Contest (SSB) on April 13. The RSGB 80 Meter Club Championship (SSB) is scheduled for April 16. The CQ WW WPX Contest (SSB) is March 29-30. Next weekend, look for the Holyland DX Contest, the TARA Skirmish Digital Prefix Contest, the ES Open HF Championship, the Feld Hell Sprint and the EU Spring Sprint (SSB) on April 19. The Michigan QSO Party, the EA-QRP CW Contest, the Ontario QSO Party and the YU DX Contest are April 19-20. The Run for the Bacon QRP Contest is April 21. The SKCC Sprint is April 23 and the RSGB 80 Meter Club Championship (Data) is April 24. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 20, 2008, for these online course sessions beginning on Friday, May 2, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* National Hurricane Center Director: Hams Give "Valuable" Reports: Director of the National Hurricane Center (NHC) Bill Read, KB5FYA, praised Amateur Radio at the National Hurricane Conference in Orlando earlier this month <http://www.voipwx.net/local/Bill_Read_on_Ham_Radio_Hurricane_Conference 2008.wmv>. "Ham radio has always played a critical role in emergencies,"

Read said. "What goes out when you have a high wind event or major flooding is the communications system, so you lose even cell phones, landline phones, commercial radio and TV. In those cases, ham radio operators that can put up emergency transmitters and antennas in the wake of a storm can give us reports that are valuable. They also help in the search and rescue efforts in the aftermath." The NHC has a dedicated amateur station on-site -- WX4NHC -- and has worked closely with hams for decades. -- Thanks to Dan Musten, KD4RAA, and John Van Pelt, K4JVP, for the information

* Zapping Cancer Cells at 13.56 MHz on "60 Minutes" This Weekend: John Kanzius, K3TUP, of Erie Pennsylvania, has been working on an RF-based treatment for cancer that is currently undergoing testing. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Kanzius is scheduled to be on the CBS news show "60 Minutes" on Sunday, April 13 (keep in mind that the line-up could change). "While there never is a way to predict what shows and what ends up on the cutting room floor, John gave as many plugs to his ham radio background as he could in being the foundations of hands-on learning that led to his research and invention," Pitts said. Kanzius, a very active Amateur Radio operator, aided in the creation of the upcoming ARRL Technology and Amateur Radio public relations campaign. Read more about Kanzius and his ground-breaking idea to kill cancer cells with radio waves in the February 2008 issue of QST.

* ARRL VE Manual Now Available: The ARRL VEC leads the way when it comes to licensing amateurs, thanks to the excellent work of thousands of volunteer examiners who give so generously of their time, energy and skill. Whether you have ever thought about becoming a Volunteer Examiner or you are a seasoned VE, the "ARRL VEC Volunteer Examiner Manual" <http://www.arrl.org/catalog/?item=1328> is the complete guide to the ARRL Volunteer Examiner program. Packed with everything new and experienced ARRL VEs need to know, this book is loaded with information, including chapters on becoming a Volunteer Examiner, the Volunteer Examiner Team, preparing for the test session, Form 605; conducting the test session, session report and returning documents, FCC Part 97 Rules and more. To learn more about becoming an ARRL Volunteer Examiner, please see the ARRL VEC Web Page <http://www.arrl.org/arrlvec/become-a-ve.html>. Order your copy of the "ARRL VEC Volunteer Examiner Manual" today.

* Ham to Hike Pacific Crest Trail: Bruce Prior, N7RR, a contributor to QST, has announced plans to hike the Pacific Crest Trail (PCT) later this month. The PCT is 2650 miles long, ranging from the California-Mexico border all the way to the Canadian border and reaching an altitude of 13,153 feet. On April 19, Prior will begin the journey near Campo, California with hopes of reaching Manning Park, British Columbia in late September or early October. Prior will bring along his Elecraft KX1 with the 30 meter/80 meter module, as well as resonant half-wavelength dipole antennas for the 80, 40, 30 and 20 meter bands. While not planning to do any pedestrian-mobile contacts, Prior said he

will wait until he has set up camp for the evening before getting on the air: "Occasionally I may decide to operate in the daytime, such as from the summit of Mount Baden-Powell (9399 feet) or at the California-Oregon border on the PCT." For more information on frequencies, times and nets that Prior will be on, please visit his blog <http://www.n7rr.com/>. According to the Pacific Crest Trail Association (PCTA), approximately 300 people attempt to hike the entire trail from end-to-end each year. The trip usually takes between four and six months. Around 180 complete the hike each year. The route is mostly through National Forest and, where possible, protected wilderness areas. The trail avoids civilization in favor of scenic and pristine mountainous terrain with few roads, passing through the Laguna, San Jacinto, San Bernardino, San Gabriel, Liebre, Tehachapi and Sierra Nevada ranges in California, and the Cascade Range in California, Oregon and Washington.

* William F. Buckley Meets Amateur Radio: In a personal essay published in the April 7, 2008 issue of "The National Review," the late William F. Buckley Jr described a fascinating story involving himself, Senator Barry Goldwater, K7UGA (SK), and of course ham radio. It seems that Mr Buckley was part of a 12 man trip to Russia's Vostok station, a very remote outpost at the magnetic South Pole. In addition to his brother, Senator James Buckley, their old pal Barry Goldwater and his son Barry Jr were also members of this expedition. Buckley described being in a crowded Soviet igloo, entertained with "trays of caviar and tumblers of vodka." After toasting his Russian host, he was suddenly taken aside by Barry Jr. "Dad wants to see you" he said, pointing to the door. Buckley was taken to another igloo, apparently the radio shack. "Thought you might like to talk to your wife," the senior Goldwater said. Buckley describes the prideful look on Goldwater's face, having maneuvered the Soviet radio to contact his wife back home in Arizona! Although he was a man famous for his complete control of the English language, Bill Buckley said he was "speechless" as he heard the telephone ringing and his wife answering the telephone! He said, "It's me darling" and his wife responded, "It's three o'clock in the morning!" Buckley exclaimed, "I'm calling from the South Pole!" This story reminded me of the many nights back in the late 1970s when I gladly helped with phone patches from the US Navy base at McMurdo, Antarctica. Just as Senator Goldwater did, I awakened many people in the wee hours of the morning with a phone call from their loved ones on the bottom of the world! -- Bruce Jackson, KA5ELC, Cordova, Tennessee

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

HAM RADIO ON THE NET: IRC MORSE COMES TO THE WWW

It was bound to happen and now it has, Morse code over Internet Relay Chat or IRC.

According to its host website, CWirc is a plug-in for the X-Chat IRC client. It is designed to transmit raw Morse code over the internet using I-R-C servers as reflectors. The transmitted Morse code can be received in near real-time by other X-Chat clients who are equipped with the CWirc plug-in.

CWirc tries to emulate a standard amateur radio rig. It has the ability to send and receive Morse over virtual channels, and it can listen to multiple senders transmitting on the same channel. Morse code is keyed locally using a straight or iambic key connected to a computers serial port, or using the mouse buttons, Sound is played through the soundcard or through an external sounder.

Note that CWirc doesn't do any Morse decoding. It simply transmits and receives C-W timing events. The program and your computer does the rest to give you a Morse code experience without the radio, the antenna or any T-V-I.

More about CWirc is on-line at users.skynet.be/ppc/cwirc/ The website also has historic information on the Morse code and the telegraph. (Southgate)

**

RADIO LAW: KANSAS PROTECTS HAM RADIO TOWERS AND ANTENNAS

Kansas Becomes 26th State to have a law assuring to rights of hams to have antennas. Known as the Kansas Emergency Communications Preservation Act the new measure is fashioned after federal statute PRB-1.

The wording of HB 2805 is simple an unambiguous. It states that if a municipality takes any action that regulates the placement, screening, number or height of a ham radio station antenna structure, that this action must reasonably accommodate federally licensed amateur radio service communications. Also that the action must constitute the minimum regulation practicable to carry out the legitimate purpose of the governing body.

As to existing towers and antennas: These are grandfathered under a stipulation that says antenna support structures constructed prior to the bill's effective date are exempted from subsequent changes in zoning regulations. Also that they may be repaired as needed.

According to Tom Laux, N0AG, the Salvation Army was very supportive of the measure. Representatives of the Salvation Army twice testified in support of it at hearings held in Topeka. Laux says that they were fantastic.

The bill, written was by Rep Arlen Siegfreid. It unanimously passed in both the houses of the Kansas legislature. Kansas Governor Kathleen Sebelius signed HB 2805 into law on April 9. It takes effect July 1, 2008.

In the newsroom, I'm Bill Pasternak, WA6ITF. Jim. (QRZ, eHam, N0AG, others)

**

WORLDBEAT - LEBANON: AL JAZEERA TELEVISION COVERS HAM RADIO

Amateur Radio was highlighted on Quatar's international television service Al Jazeera. This in a documentary news show on Sunday April 6th. Amateur Radio Newsline's Burt Hicks, WB6MQV, is here with the details:

--

The Al Jazeera program, Hadeeth Al Sabah featured Radio Amateurs of Lebanon President, Hani Raad, OD5TE. Raad talked about Amateur Radio principles and his personal experience in ham radio emergency service communications over the past 28 years.

By way of background, Hani Raad, OD5TE, is a graduate of George Washington University with a degree in Electrical Engineering. He also holds the United States call sign AA3EI and was very active in both ARES and RACES when he lived in the Washington D.C area. As such he holds expertise on the methods used in the area of ham radio

Emergency Communications in both the United States and Lebanon.

The show, which was repeated on Monday the April 7th, was described as a look at both worlds of ham radio and the way in which hams respond in time of crisis in both.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, saying a happy 1600 to all.

--

In an e-mail to Newsline, OD5TE said that the program was extremely successful and all the feedback he has received form hams around the world has been very positive. (OD5TE, others)

**

HAM HAPPENINGS: WORLD AMATEUR RADIO DAY AND THE WARD AWARD

World Amateur Radio Day 2008 will take place on April 18th and this year you can win an award just for taking part in this years celebration. That's because the Polish Radio Amateur's Journal, with the support of the Polish Amateur Radio Union will be sponsoring this years WARD or World Amateur Radio Day award. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

By way of background, each year on the anniversary of its founding, the International Amateur Radio Union marks its inaugural meeting in Paris. A meeting that took place on April 18th some 83 years ago.

In honor of this historic event the IARU dedicates World Amateur Radio Day to the future of the world-wide service. And in continuing this theme the World Amateur Radio Day award will be granted by the Polish Radio Amateur's Journal to those who make either 10 QSOs on the High Frequency bands, or 10 QSOs on the VHF bands. All contacts must be made between 0000 and 2400 U-T-C on April 18th.

The full colored award is also available to SWL's for the same numbers of reports. To claim it you will need to send a completed application form along with a log extract that includes your list of QSO's and 5 International Reply Coupons to the The Polish Radio Amateur's Journal. Its address is MK QTC, Suchacz-Zamek - Wielmozy 5b, 82-340 Tolkmicko, Poland. Miore information is on-line at www.ward.pzk.pl

Saying a happy 1600 to all, I'm Bruce Tennant, K6PZW, in Los Angeles, for the Amateur Radio Newsline.

--

Oh yes. The deadline to file for this years World Amateur Radio Day award is midnight UTC on May 31st. (Southgate)

**

RESCUE RADIO: CANADIAN EARTH HOUR EXERCISE A SUCCESS

An emergency communications radio system was tested in Southern Ontario Canada during the March 29th Earth Hour. That's when the Toronto FM Communications Society in association with the Canadian Amateur Radio Emergency Service and Emergency Management Ontario conducted a trial of the ability of the amateur radio repeater system in the Southern Ontario to respond to crisis situations.

During the Earth Hour, the Toronto FM Communications Society net control station operated from an Emergency Management Ontario mobile command center. He logged in excess of 60 stations. All were operating on emergency back-up power sources with some operators in Hamilton to Oshawa and north to Barrie responding. The exercise proved the importance of amateur radio operators and repeater organizations in the event of a widespread disaster.

Toronto FM Communications Society operates repeaters on the CN Tower in Toronto, Ontario as well as at the highest elevation in Southern Ontario atop the Skyloft Ski Resort in Uxbridge, Ontario. More about the group is on line at www.tfmcs.com (eHam, PRWeb)

RESCUE RAFIO: EMCOMMWEST IN RENO NEVADA MAY 2 - 4

If you are into emergency communications and public service, then Reno, Nevada, is the spot to be the weekend of May 2nd to the 4th. Amateur Radio Newslie's Don Carlson, KQ6FM, is in Reno with the details:

--

EMCOMMWEST 2008 is returning to "The Biggest Little City in the World", Reno, Nevada, It will be held at the Circus Circus Hotel in downtown Reno, May 2-4.

This year's keynote speaker will be Dennis Dura, K2DCD Emergency Preparedness and Response Manager from the ARRL headquarters in Newington, CN. Dennis will bring some great information about how we can be better emergency communicators, and use the latest technology and resources available in doing so.

Emcommwest will also feature a special video presentation from Riley Hollingsworth, K4ZDH special council of the FCC's enforcement Bureau, who has agreed to do the video which will be shown at EMCOMMWEST.

Also, Emcommwest will welcome Gordon West, WB6NOA from southern California, who was with us a few years back will return as the Saturday night banquet speaker and also host a forum during the event as an introduction to Emergency Communications, and he will have a display booth set up in the vendor hall. Gordon is also bringing his mobile communications unit for us to see. Banquet seating is limited, so make reservations early!

Forums covering leadership, handling PIO duties during callouts, working with different served agencies, MARS, the latest technology, and many new presentations will highlight this year's event. Emcommwest will also have it's own SPECIAL EVENT STATION, operating on HF, UHF and VHF! Pacific Division Director Bob Vallio, W6RGG will host an ARRL forum on Sunday May 4 with many SM's and other officials taking part.

There will be raffle prizes, including radios, power supply, and many other items along with an all new, larger vendor room and an all day amateur licensing class along with VE testing, so non-ham attendees can become licensed while they are there. Advance conference and banquet registration is now available online via the website, at www.emcommwest.org. Special room rates are available from Circus Circus, via a link on the website. For information, email your requests to: <mailto:info%40emcommwest.org>info@emcommwest.org We are looking forward to a great
EMCOMMWEST this year!

From the site of Emcommwest in Reno, Nevada, this is Don Carlson, KQ6FM for Amateur Radio Newsline.

--

Again the dates are May 2nd to the 4th at the Circus Circus Hotel and Casino in Reno, Nevada for Emcommwest 2008 -- the premiere ham radio emergency communications show west of the Continental Divide. More information is on the web at www.emcommwest.org (KQ6FM, Emcommwest)

**

ENFORCEMENT: FCC TELLS TWO HAMS TO STAY OFF LOCAL REPEATERS

Two hams in different parts of the country have received warning letters from the FCC. Letters that tell them to stay off of certain repeaters in their respective geographic areas.

In New York, the trustees of the K3TSA 2 meter repeater system had requested in writing that David R. Henry, W2DRH, refrain from use of that repeater. The request was issued as a result of Henry's alleged failure to follow operational rules set forth by the licensee and or the control operators of the repeater and of the FCC rules. The FCC says that Henry had previously been requested to refrain from using the system, but had apparently ignored both verbal and written requests.

The FCC not only warned Henry that any further unauthorized use of him by the repeater will bring enforcement action against his license. It also noted that his license expires on April 21, 2009. It says that his license will not be routinely renewed unless this matter is resolved.

A warning letter has also been sent to Edward R. Drone, W0NYF. In this instance the trustee of the St. Louis and Suburban Radio Club repeaters K0STL, N0TYZ, W0FF and W0SRC had requested in writing that Drone refrain from use of the repeaters. The request was issued as a result of his alleged failure to follow operational rules set forth by the licensee and control operators of the repeaters for their users.

In a conversation with the FCC in February 2008 Drone reportedly acknowledged that he had been directed to stay off of the repeaters and stated that he would comply. However, the FCC says that on March 31st he was heard utilizing the K0STL repeater and reportedly stated that he would not refrain from using it.

Now, in its April 2nd letter to Drone the FCC warns him that it expects him to abide by the request to stay off of the repeaters and any other such request by a repeater licensee, control operator or trustee. It warns W-Zero-N-Y-F that failure to do so will lead to enforcement action that could include revocation of his license , or a modification proceeding to restrict the frequencies on which he may operate.

Drone was also asked to contact FCC rules enforcer Riley Hollingsworth and issues with him. (FCC)

**

RADIO LAW: NEW CALIFORNIA HANDS-FREE MOBILE PHONE LAW MAY IMPACT TWO-WAY RADIO AFTER ALL

California's soon to be in force hands free mobile phone law could impact on two way radio users after all. While a recently released pamphlet released by the states Department of Motor Vehicles states that the use of dedicated two-way radios such as walkie-talkies or Citizen Band radios is not affected by the new hands-free law, there are some who tend to disagree. And because of this two camps of thinking have developed.

Those fearful of the consequences of the new law are of the opinion is that judges will ignore the language in the Department of Motor Vehicles pamphlet. Instead, this group believes that those adjudicating such a case will refer to the actual law which does not generally exempt two-way radio operations from the hands-free provision.

However, a contrary opinion is that the law clearly refers to and is written around wireless telephone handsets and their use. These people note that most two-way radios are not wireless telephones. Also, that even the California Highway Patrol seems to acknowledge that the new law is about Wireless Telephones only.

The bottom line. Its likely that one of these days someone will get ticketed for using a business band radio, a C-B set or even a mobile ham radio station. That will be the test case and we are all going to have to wait and see if it actually happens and what the final outcome will be. More is on-line:

NAMES IN THE NEWS: ARRL'S HARRISON APPOINTED TO AK SCIENCE AND TECHNOLOGY AUTHORITY

A word of congratulations to ARRL President Joel Harrison, W5ZN, who has been appointed to a four year term on the Board of Directors of the Arkansas Science & Technology Authority by Governor Mike Beebe.

The Arkansas Science & Technology Authority was created by statute in 1983 with the mission to bring the benefits of science and advanced technology to the people and state of Arkansas. Harrison's appointment has already been approved by the Arkansas State Senate. (ARRL)

**

NAMES IN THE NEWS: K6JGN NAMED NEWPORT BEACH VOLUNTEER OF THE YEAR

And congratulations also to Ed Karagozian, K6JGN. On March 20th, Karagozian was named as the 2007 Volunteer of the Year for his eighteen-plus years of service with Newport Beach California RACES. The honor was bestowed by the Newport Beach Chamber of Commerce held its 37th Annual Police Appreciation Awards Breakfast (Via e-mail)

**

NAMES IN THE NEWS: N2NT NAMED NEW CQ WW 160M CONTEST DIRECTOR

Veteran contester Andy Blank, N2NT, of Dayton, New Jersey, has been named the new Director of the CQ World Wide 160-Meter Contest. Blank succeeds Dave Thompson, K4JRB, who has decided to retire after 16 years at the helm of the event. (CQ)

**

YHOTY: 2008 NOMINATIONS SOUGHT

And a reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

(ARNewsline")

THE SOCIAL SCENE: HEIL SOUND HOSTING 2008 NAB HAM RADIO RECEPTION

If you are planning to attend the National Association of Broadcasters Convention, Bob Heil, K9EID, advises that the annual Ham Radio Reception hosted by Heil Sound will be held on Wednesday night, April 16th, from 6:00 to 8:00 p.m. local Las Vegas time.

As usual, the venue in Ballroom B of the Las Vegas Hilton Hotel. The hotel adjoins the Las Vegas Convention Center which is the home of the National Association of Broadcasters gathering. Bob says that there will be lots and lots of prizes and that you never know who might show up. (Heil Sound, K9EID)

**

THE SOCIAL SCENE: REPEATERS FOR HAMS ATTENDING THE NAB CONVENTION IN LAS VEGAS

And the Las Vegas Radio Amateur Club invites you to enjoy the use of our repeaters while you are in town. The club says it will have its UHF and VHF systems linked together most of the time. According to Bill Croghan, WBï¿½KSW, the 2-meter repeater is on 146.94 MHz with a minus 600 kHz offset, and requiring a 100 Hz sub-audible access tone. The 70 cm system operates on 448.500 MHz with its input MHz lower. It too requires a 100 Hz tone. (CGC, WBï¿½KSW)

**

THE SOCIAL SCENE: THE ARRL AT NAB 2008

Also, last but by no means least, the ARRL will have its usual presence at NAB 2008. Look for them in Booth L One off to the left of the main exhibit hall entrance. This years National Association of Broadcasters Convention runs from April 11th to the 17th, at the Las Vegas Convention Center in Las Vegas, Nevada. (CGC, WBï¿½KSW)

**

THE SOCIAL SCENE: SHELBY HAMFEST LOOKING FOR A NEW HOME

The famed Shelby Hamfest is not cancelled. But it is looking for a new home.

Word of the supposed demise of Shelby began spreading across ham radio cyberspace last week. This as bloggers interpreted a newspaper story regarding the inability of the Shelby Amateur Radio Club and the operators of the Cleveland County Fairgrounds to reach agreement on a contract for the 2008 show.

But Susan Melvin, K4ZXN, who is a member of the Shelby Amateur Radio club has posted to QRZ dot com that the blogs are not correct. She

says that the Shelby Hamfest has not been cancelled. Rather, the planners are actively seeking a new site for the show.

Melvin adds that as soon as the official word comes, it will be posted on the club's website. Its URL is www.shelbyhamfeast.org. (QRZ.com)

THE CHANGING OF THE GUARD: AZDEN'S LEW REINBERG, W2BIE - S.K.

Once again the changing of three guard in ham radio continues. This with word that Lew Reinberg, W2BIE, formerly with the Amateur Radio Products division of Azden Communications, has passed away.

Reinberg came to Azden after a long career in the photographic and electronics industries. This, as a final job prior to his full retirement several years ago. He left when Azden announced that the company had decided to exit the ham radio marketplace.

First licensed back in 1954, Reinberg was active on all bands from HF through UHF. He was an avid DX'er and well known in both the New York City and Baltimore, Maryland ham radio communities. He was a fixture with the Long Island Mobile Amateur Radio Club almost since the groups inception and its said that there was a room in Lew's house that wasn't within ear shot of a ham radio or scanner.

Lew Reinberg, W2BIE, is survived by his wife Elaine, W2ECR, and son Steven, N2HOK. Services for W2BIE were held on Monday, March 17th at the Young Israel of West Hempstead Temple on New York City's Long Island. (K2EPM)

**

HAM HAPPENINGS: COMMERATING THE TITANIC

At least two ham radio groups say that they will mark the 96th anniversary of the sinking of the RMS Titanic special event operations. First up is W- Zero-S, which stands for "White Star Line." It will be on the air from the Titanic Museum in Branson, Missouri. 1300 UTC on Saturday, April 12, and conclude at 2400 UTC on Sunday, April 13.

Members of the Nixa Amateur Radio Club and the Southwest Missouri Amateur Radio Club will bring W0S to life along with corporate

underwriters Icom, MFJ, MicroLog, Rayfield Communications and Vibroplex. Listen out for this one on SSB, CW, PSK plus some activity on D-Star, EchoLink and IRLP. More information including a full list of frequencies and the QSL route is on-line at www dot wzeros dot com

Alson on tape is special event station W1MGY. It will operate from the Titanic Historical Society Museum in Indian Orchard, Massachusetts. Operation will concentrate on 20 and 40 meters. Listen out for it on April 11-12 from 1400 UTC until 2030 UTC both days QSL' for this one go to the Titanic Historical Society, W1MGY, PO Box 51053, Indian Orchard, MA 01151. (Press releases)

**

WORLDBEAT - ENGLAND: RSGB STAFF MEMBER RUNNING LONDON MARATHON ON STILTS

Meantime. on Sunday April 13th, a Radio Society of Great Britain staff member hopes to set a new world record. That's when Michelle Frost, of the RSGB Commercial department, will be running the London Marathon on four foot high stilts!

Michelle has been stilt-walking for close to ten years but only graduated to the four foot high ones about three years ago. This time around she is taking to her lofty perch to raise money for REACH. This is a U K based charity dedicated to helping children with upper limb deficiencies.

To date, no-one has ever competed in a marathon on stilts and the Guinness Book of Records is reportedly starting a new record category to celebrate. To find out more about Michelle and her charity walk on stilts, go to www.justgiving.com/rainbowdave on the World-Wide-Web. (RSGB)

**

THAT FINAL ITEM: CELEBRATING 1600 WEEKS OF THE AMATEUR RADIO NEWSLINE

And finally this week & Hmmm... How many times have you heard those words on these newscasts? The words "&and finally this week."

Well, if you have been with us since the beginning in 1977, this week marks the 1600th time one of our news anchors has introduced the last story of the week with those words going right back to the days we were the Westlink Radio Network.

It Jim Hendershot, WA6VQP, who originally conceived, produced and voiced the Westlink newscasts. Actually, Westlink was originally intended for one newscast to talk about the pros and cons of the hottest topic of the day. That topic was repeater deregulation:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

That's how it started. And after 70 some off newscasts, Jim Hendershot moved away from Los Angeles, turning the reins of Westlink Radio over to Bill Pasternak, WA6ITF. He in turn solicited the assistance of two friends from NBC News. Broadcast Engineer Bill Orenstein, KH6QX, and the late Alan Kaul, W6RCL:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Over the years there were many highlights of the world of Amateur Radio that Westlink and then Newsline covered live on tape. Among them the grand opening of the ham radio station on board the Queen Mary Ocean Liner and the first QSO's from its refurbished radio room. That happened back on April 4th of 1979, when the late D-X'er Don Wallace, W6AM, made that opening night contact.

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Then there was the first contact made from the space shuttle Columbia by astronaut Owen Garriott, W5LFL, and Lance Collister, WA1JXN, in Ferenchtown, Montana. That QSO took place on November 28th 1983 and we were the first to bring not only the story, but the sound of the actual contact as well:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

But not all of the stories we covered were happy times. One of the saddest days in ham radio history took place on May 23, 1980. At three minutes into the launch of Amsat's Phase 3 A satellite something went wrong with the French-built launch rocket and the ham radio payload went into the sea:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Undaunted, within a few weeks Amsat began work on Phase 3B. It would go to space on June 16, 1983 and became the highly successful

AMSAT-OSCAR 10. A year later, A Oh 10 was used for the first ever HT to HT repeater to repeater contact and we brought the sound of that historic moment to your repeater and even to your HT:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Admittedly by today's standards with the Internet, IRLP and Echolink that 1984 repeater interlink using a ham radio satellite sounds kind of crude. But it did open the eyes of many hams who had been conditioned to think of a repeater as a purely local device. Suddenly repeaters had matured to where a 2 watt H-T could be heard nationwide. Eventually the technology of the 1990's and this first part of the 21st century would give a tiny hand held a voice heard around the world.

And so here we are in April of 2008, some 30 years and 8 months after the very first Westlink radio bulletin aired in Los Angeles. Back then, none of us had any idea that it would be here this long and that some of us who were there back then would still be doing it now. But we are and we will continue for as long as you want us. In our book, you are the most important reason that we work to bring you a timely news bulletin every week. And as we say at the end of each newscast, and as we say again today, we thank you for listening.

Im' Jim Davis W2JKD.

Rather nice radio he's made. The technology is exposed, and visible, and it's aesthetics are there for everyone to see. Love them tubes. Nice warm tones against a black surface. I'll give it an A. I'm curious though. One of those tubes had a different glow to it. Would that be a tuning eye tube?

Anyone going to Dayton this year?

I've been going for the past several years, but figuring on around:

175 dollars for gas
325 for room (Wed through Saturday at a good rate)
125 dollars for food (maybe if I do a lot of Micky D's)

I'm looking at 600 plus dollars before I even buy anything. Think I may have to take a pass...

As those fuel costs skyrocket, it might be pretty hard on Dayton in the future.

Not me but then Dayton comes at a realy bad time for me since the snow
here is still not melted enough to to do those spring tasks but those
sorts of number Enay doo seem to be awfully hard on all hamfests
Dayton or otherwise

Sort of; it's a tuning indicator. Same technology, but not round, so
it's not an "eye".

That rx isn't just good to look at, it's got some serious performance
too. Note the number of poles in the ladder filter, the balanced beam-
deflection mixer, etc. Yet it's simple.

Another poster asked about other homebrew sites. Here's what one ham
uses:

http://hometown.aol.com/n2ey/myhomepage/

and a receiver he built ~35 years ago:

Southgate Type 4

http://www.qsl.net/k5bcq/Jim/jiminfo.doc

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

This seemed high to me, so I checked out the distance. For a vehicle
that gets ~20 mpg and $3.25 gas it's pretty close.

> 325 for room (Wed through Saturday at a good rate)
> 125 dollars for food (maybe if I do a lot of Micky D's)

The only way I can see to cut that down is to go with a buddy and pack
a lunch.....

> I'm looking at 600 plus dollars before I even buy anything. Think I may
> have to take a pass...

> As those fuel costs skyrocket, it might be pretty hard on Dayton in the

Maybe. But note that even if the price of gas was cut in half
tomorrow, the trip would still cost over $500. IMHO the amazing thing
is that so many hams from outside the day-trip area go to Dayton.

Actually, gasoline prices aren't really skyrocketing. What's happening
is that we've had years and years of gasoline prices not keeping up
with inflation, and now they are making up for lost time (and then
some).

Here's one interesting analysis:

http://www.energy.ca.gov/gasoline/statistics/gasoline_cpi_adjusted.html

I factored in 3.40 for gas, and some riding around during the week. The Vitara gets around 28 mpg highway. I won't be surprised if it costs more than that by mid-May.

Very true. What happens though is that it hits a trigger point, and a person who might have figured on going someplace might just reconsider it's worth. sometimes it can even jog a person to look at what they are spending. I can get a lot of equipment for that (that total amount of) money, and after 2 years, I can afford that IC-7000 I drool over.

The trade off is that I really do enjoy the interaction with other Hams, the seminars, flea market and ability to talk to the vendors.

> Actually, gasoline prices aren't really skyrocketing. What's happening
> is that we've had years and years of gasoline prices not keeping up

> some).

What that doesn't show is the impact of changing driving styles. When I first started driving in the early 70's, most people didn't put anywhere as many miles on their cars as they do now. I used to put less than 10K per year on a vehicle, now it is closer to 30K per annum. Lots of reasons for this, some good, some bad, but when my XYL was driving a Grand Cherokee and I was driving a Windstar, our gasoline bill hit around 600 dollars one month. That was while gas was still in the 2 something dollar range.

So in anticipation of future gas prices and economic conditions, I bought a Vitara, and she bought an Aerio. (we had to buy new cars anyway, so the payment cost is not so relevant.

So while inflation adjusted prices tell one story, total dollars put in the gas tank tell another.

And in all, we're just adjusting ourselves to the new reality, making ends meet. All over the country folks are adjusting.

Hmm. Try paying UK prices and you'll change your mind..! Not certain of
the exact conversion rates as our prices are in litres and I'm not sure of
the size of the US gallon, I believe it's slightly smaller than the UK
one, but average prices here are around ï¿½1.07 per *litre* at the moment,
which at current pound/dollar rates makes it around $9 per imperial
gallon.

I wish we had your prices..!!

Ivor;

The major difference in price is in the taxes charged by the various
taxing districts.
Remove the taxes and the cost of the petro is about the same world over.

Dave WD9bdZ

Our regular unleaded is currently $3.39 per USG.

Sorry if I wasn't clear.

What I should have written is that *US* gasoline prices aren't really
skyrocketing.

> Not certain of
> the exact conversion rates as our prices are in litres and I'm not
> sure of
> the size of the US gallon, I believe it's slightly smaller than the UK

> imperial gallon.

The following were found at various sites (thanks Google):

One US gallon is 3.79 litres. So 1 gallon of gasoline at the price you
quote would cost 4.055 pounds.

Today, April 16, 1 pound exchanges to 1.9756 dollars, so 4.055 pounds
equals $8.01 for a US gallon of gasoline.

> I wish we had your prices..!!

Thanks for proving my point!

The amateur radio connection in all of this is that inflation hits
different things in very different ways, which of course has its
effects on us hams. For example, here in the USA, even with the weak
dollar, amateur radio transceivers are a better deal than when I
became a ham 40 years ago, and probably any time since. Back then the
biggest bargain in new ham gear was the $250 Heath HW-101 kit. $250

then equals $1500 now, and for $1500 you can get a lot more rig! (the westegg inflation calculator says a dollar in 1967 bought what about $6 buys today, on average).

If you really want to get sticker shock, check out what the PCs of 10-20 years ago cost, then add in the inflation.

OTOH the cost of a house in many parts of the USA to put the ham rig in has gone up a lot more than a factor of 6, even allowing for the current soft RE market. (A lot of us who aren't retired have to go where the jobs are.)

The result is that we have a lot of US hams today who have great rigs but not houses where they can gave good antennas.

Or an Elecraft K3....

It's part of human spending behavior that some
expenditures are viewed so differently than others.
A few dollars here and there adds up but
doesn't seem the same.

> The trade off is that I really do enjoy the interaction with other

Total inflation-adjusted dollars for transport is the ultimate
factor.

My wife does a lot of local travel for her job. Visiting job sites,
doing inspections. Or at least she did. The housing market dried up
around here and she's working one day a week now, so that has decreased.

for myself, I do a bit of travel for work also. It's all on my dime.

>> So in anticipation of future gas prices and economic conditions, I
>> bought a Vitara, and she bought an Aerio. (we had to buy new

Well, yes and no. The total cost of living has increased significantly.
I'm not talking about the official inflation figures, they aren't
reliable any more. This is just the amount of dollar outlay per month.
Health insurance doubling in a years time, Gas doubling over a few years
time, House escrow account increases of 100 dollars per month.

So while the statistics say we're getting a bargain, ground truth tells
me that I have to reel in costs somewhere. Bargain or not, one has
significantly less money these days after the bills are paid. And
gasoline is one area that I can at least start to control.

Ahh, the Priuii are very cool vehicles. I shoulda known you'd be an
owner of one. On a Ham related topic, have you noticed much electrical
noise from it? I've heard some scuttle that they make some RFI. Don't
know what that is in comparison to a regular gas vehicle, as they can be
noisy also.

Luckily diesels are starting to come back to the USA I believe. I (not in the US) have a VW 1.9 diesel engine using abt 4.5liters/100km average per tank (local roads, traffic jams, 60miles one way to work every day). That is 52 miles to the gallon. My car is a bit bigger than the old Rabbit and has over 200.000 miles on it and is over 9 years old.

380. RFI mitigation tips for mobile Ops

Newsgroup: rec.radio.amateur.moderated
Date: 2008-04-17 17:56:06 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <fu7sbl$11ki$1@f04n12.cac.psu.edu>
Source record: 2951

Hey all,

I installed a Bugcatcher in my vehicle last year, and thought I might share some tips from my experience.

1. Power supply.

Run separate wires for power. Don't try to run an HF rig off a cigar lighter outlet. I don't care if is an FT-817.....

2. Ground, ground, ground

Getting the "other half" of the antenna to work well is probably the most important thing you can do. As well as providing the "ground", it eliminates a lot of little antennas that can give you RFI headaches.

I used coax shield with lugs soldered onto the ends to bond everything. Keep them as short as practical. Mine were around 4 inches, the longest around 6 inches. In most cases, the bond can be made by using bolts that are already on the vehicle. In a few cases I had to drill and bolt. Be careful of where vehicle wires are already running.

Bond the hood on both sides, all the doors, the hatch if there is one. Don't forget to bond the exhaust pipe in at least 2 places. The exhaust even looks a little like an antenna.

Bond the radiator, especially if it is one of the newer ones that have plastic ends. There is usually some place on the metal part that has a bolt you can attach to.

Bonding the engine is mandatory. If your vehicle has a frame, like mine does, bond the frame to the body at several locations.

I probably ended up with 30 different places when I bonded.

3. Ferrites are your friends

I used clip on ferrites. These worked well, and were something around a dollar a piece.

Clip them on:

Alternator wires, battery wires, radiator fan wires, gas pump power wires, radio speaker wires, ignition coil wires (some engines now have a separate coil for each cylinder. If you can reach your wiper motor and washer pump motor clip one on there also.

If you can get a ferrite on the dreaded main computer module it would be a big help also. I just happened to have a big clip on from an old IBM

computer that fit around the cable of my computer unit.

4. Look for other sources.

After all the corrections I made, I suddenly found S9 level noise on HF. I looked to see if ferrites had fallen off, or a bond failed. I bought a cheap transistor radio to sniff out the problem.

Turns out that my inverter for my laptop is really noisy. I unplugged it, and the problem went away.

In the end, my mobile HF system is less than S2 (that was as low as I could test it, seemed to be just around ambient. The only noise source that I haven't beat yet is the cruise control, and I can just avoid using that. Finally, I have to remember to keep the car stereo turned off while transmitting, otherwise I get some strange stuff coming out of the back speakers.

Oh, and by the way, the antenna appears to work "very well", at least I've gotten good signal reports on 40 and 20, and reasonably good ones on 75 meters also. It seems to make use of the limited efficiencies we see with short HF aerials.

Don't know if anyone else has anything to add, but I thought I'd share this.

Strangely enough, I took absolutely NONE of these precautions - and my mobile is working nicely. (that doesn't mean I recommend ignoring Mike's points!)

I'm even running it from the lighter outlet. Figured it would be OK for the ride home from Milwaukee running 20 watts or so. Kept creeping up the power, I'm now at 80 watts (all bands) & not a hint of trouble.

Again, I don't recommend it though!

The biggest source of QRN are leaky powerline insulators. Next biggest source are passing semis. (last time I was HF mobile, semis were quiet. Obviously something has changed in the typical truck engine?)

On Thu, 17 Apr 2008 13:56:06 -0400, Michael Coslo wrote:

> see with short HF aerials.

My Hamsticks are quite effective on 40 - can work pretty much anyone I can hear if there isn't a pileup, and sometimes even when there is. Managed to work a VK6 on 40 at sunset on my way into town a few months back - that's darned near the antipodes from here. Managed to work VP6DX on 80 from the car! Strangely 20 doesn't work quite so well, though I still work plenty of DX.

I would say that what's happening is this: The necessities (house, medical, transport) are getting more expensive while the luxuries (computing power, flat-screen TV, plane tickets where you have a lot of leeway as to destination and time) are getting cheaper. Put them all together and inflation *seems to be* low. But the mix is different than it was years ago.

On top of that is the fact that the number of "necessities" keeps rising. To give an Amateur Radio example, there was a time when putting up a moderate-sized tower in most areas did not require a variance or a building permit. A ham-homeowner simply put it up, or at most went down to the township building, filled out a form and paid a

small fee.

Nowadays in many areas there are much more stringent engineering and insurance requirements for an Amateur Radio tower. The local ordinances often consider it a "structure" and the process is much more complex and costly. So while the price of the tower itself isn't much more than it used to be, adjusted for inflation, the total price of owning an *installed* tower has greatly increased.

One more issue: LIfespan of certain items, such as ham rigs. Compared to most electronic items, it seems to me that ham rigs have a very long useful lifespan compared to other electronics. Decades rather than years. Just look at the stuff for sale at Dayton or elsewhere. What do others think?

> Ahh, the Priuii are very cool vehicles. I shoulda known
> you'd be an owner of one.

TNX. It's a different sort of vehicle! They are common around here; summer 2006 there was a long wait for one. Like many cars, a lot depends on what kind of driving you do and how you drive.

> On a Ham related topic, have you noticed much electrical
> noise from it? I've heard some scuttle that they make some RFI.
> Don't
> know what that is in comparison to a regular gas vehicle, as they > can be noisy also.

Can't say; never been mobile on the ham bands in it! But I suspect that the inverters would make a least some noise.

Still miss the diesel, though. 17 years with the same car; only owner from showroom to crusher.

Amateur Radio Newsline(tm) Report 1601 - April 18, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

If you look back, you will notice that the last time you heard me soliciting donations was way back in 2007. Thanks to your generosity last year the need for me to make these announcements was minimal.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

OK. Time for me to get back to my desk and back to balancing the books. For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1601 with a release date of Friday, April 18tht, 2008 to follow in 5-4-3-2-1.

The following is a QST. Dayton honors three hams for their outstanding contributions to Amateur Radio. We have their reaction. Also, repeater coordinators will meet the public at Hamvention 2008 and a ham who devised a possible cancer cure is featured on the CBS news program 60 Minutes. All this and more on Amateur Radio Newsline(tm) report number 1601 coming your way
right now.

HAM HONORS: DARA ANNOUNCES 2008 AWARD WINNERS

The Dayton Hamvention has announced the names of the recipients of this years Technical Achievement, Special Achievement and Radio Amateur of the Year Award awards. Awards that some call the Tony, the Emmy and the Oscar of ham radio. Amateur Radio Newsline's David Black, KB4KCH, spoke to this years recipients, all of whom are thrilled to have been chosen.

--

The Hamvention's top honor--Amateur of the Year--goes to H. Ward Silver, N0AX, of Bellevue, Washington:

--

NA0X: "I'm still kinda buzzin' from gettin' the call."

--

Silver's name is synonymous with helping many people get into ham radio. He's the author of books including Ham Radio For Dummies, along with magazine articles and manuals for the A-double-R-L. Readers of QST magazine recognize his name as author of the Hands On column. Ward says his writing is intended to show that becoming a radio amateur is not hard and carries lots of rewards.

--

N0AX: "I guess when I was a kid in the basement I never really thought I was ever going to be Dayton Ham of the Year material but its great to be noticed"

--

Silver admits ... he didn't see the Hamvention award coming:

--

N0AX: "It was a big surprise and I was really flabbergasted to get the call. Its not something you expect and I was very gratified and thankful to the committee and however I got nominated is terrific."

--

Terrific is what the Hamvention thinks of the idea Emery W. McClendon, Sr., KB9IBW, had back in 2003. That's when the Vietnam Wall exhibit made a stop in Fort Wayne, Indiana. McClendon and fellow hams set up an operating station at the exhibit, as part of what McClendon called ARMAD, Amateur Radio Military Appreciation Day. The hams invited military veterans to participate--and McClendon says participate, they did.

--

KB9IBW: "We contacted a lot of stations worldwide and around the country and it actually brought tears to a lot of peoples eyes. It was very emotional as they were able to hear other veterans.

"Some were active duty in the military and a lot of Vietnam veterans were on the air that day and it brought a lot of tears and a lot of memories back to a lot of people."

--

ARMAD's popularity has grown every year, drawing recognition by Indiana Governor Mitch Daniels, as well as Congressmen, Senators and even the Indianapolis Colts. McClendon's work has led to the Hamvention naming him as winner of this year's Special Achievement Award. He says the Hamvention's recognition gives him a special feeling of accomplishment:

--

KB9IBW: "I was really happy about it because it was a surprise. That's not what I am doing all this for. I'm doing it trying to promote Amateur Radio, but it is an honor."

--

McClendon says ARMAD is helping ham radio grow:

--

KB9IBW: "We've gained several new members to our clubs here and people inquiring as to how to become Amateur operators and who have tested and become operators because of what we have done here with ARMAD."

--

Another ham being honored is Thomas C. McDermott, N5EG, of Medford, Oregon. He's winner of the Hamvention Technical Achievement Award.

--

N5EG: "It was really not expected."

--

McDermott has spent more than 20 years helping promote various amateur radio technical projects including wireless digital communications.

In 1986, McDermott co-developed the TexNet packet switching network which covered 3,000 miles at 9600 baud on UHF and connected to nearly fifty links on 2 meters. He's a founder of the Texas Packet Radio Society and headed up a 900 MHz spread spectrum project and developed the TAPR-AMSAT Windows software development system.

--

N5EG: "Hams have been innovators (for) over a hundred years and the one thing that hams are good at is kind of thinking outside of the box in terms of coming up with new solution and new technologies.

"A number of the previous award winners have been recognized for doming up with outside the box solutions, and so I think that kind of the creative aspect of hams is well matched. And so a lot of hams are interested in technology and interested in novel solutions."

--

Ward Silver...Emery McClendon...and Thomas McDermott...three amateurs getting special recognition for their contributions to ham radio. They'll be recognized when hams worldwide gather for the ultimate ham radio convention, Hamvention 2008, May 16th, 17th and 18th.

From the Southeast Bureau in Birmingham, Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

If you're interested in knowing more about ARMAD, the project Emery McClendon started, you can check out the project's website at www dot armad-dot-net.

You can hear more with this years Hamvention award winners on the Rain Report. Its on-line at www.therainreport.com. (KB4KCH, ARNewsline(tm))

REPEATER COORDINATION: NFCC TO MEET IN DAYTON

Still with Hamvention news, word that the National Frequency Coordinators' Council will be holding an open meeting at the 2008 Dayton Hamvention. Moderated by NFCC President Jay Maynard, K5ZC, the gathering takes place on Friday, May 16, from 9:15 to 1015 a.m. in Forum Room 5 of the Hara Arena.

For those not aware, the National Frequency Coordinators' Council has as its members the majority of frequency coordination bodies in the United States. This forum will update NFCC members and those interested in

frequency coordination on the current status of the organization and spectrum management.

Again that's Friday, May 16, from 9:15 to 10:15 a.m. in Forum Room 5 of the
Hara Arena for the NFCC at Hamvention 2008. (Via e-mail)

**

REGULATORY ISSUES: I MISS THE FCC

"I Miss The FCC" is an in-depth look at the current state of the Federal Communications Commission in the April issue of C-Q Magazine that's certain
to raise some eyebrows in the nation capital as well within the ham radio community. Penned by Jeff Reinhardt, AA6JR, who is also a contributor to Newsline, the article traces the agency from its days as the enforcer of technical standards to the FCC of today which seems to be bending over backward to the whim and will of those it is supposed to regulate.

One of the cases cited by Reinhardt was the Telecommunications Act if 1996 which revamped the original 1934 legislation. Reinhardt notes that much of it was written by industry lobbyists which resulted in the nations airwaves being delivered to commercial interests.

The bottom line: Jeff Reinhardt's "I Miss The FCC" is a must read for hams, G-M-R-S, CB'ers and any small entity that uses radio spectrum. It sheds a whole new light on what is really happening in the halls and offices of the FCC. It begins on page 66 of the April issue of CQ Magazine. (CQ, ARNewsline(tm))

**

RESCUE RADIO: CONGRESS ASKS WHY NOBODY BID ON NEW EMCOMM SERVICE

A congressional panel wants to know why a plan aimed at using public airwaves and private money to create a nationwide emergency communications network failed to attract any interest in a recent spectrum auction.

The FCC had approved construction of the emergency communications plan last summer. Under the scheme, the regulatory agency set aside about one sixth of the recently auctioned airwaves for such an interoperable system to be built. Called the D block, it would have been combined with a roughly equal portion of spectrum controlled by the public safety trust to create a shared network. The winning bidder for the D block would be required to

build and maintain the network in the public interest. It would eventually make a profit by selling any excess broadband access to wireless service providers.

When the auction had been completed all but Block D had been sold. Now, the House Energy and Commerce telecommunications and the Internet subcommittee is to hear testimony from all five members of the Federal Communications Commission on the issue. It also plans to summon key figures in the behind-the-scenes negotiations that failed to lead to an agreement to construct the wireless broadband network.

The government says that construction of such a network is essential to avoid the emergency communications gaps that occurred with Hurricane Katrina in 2005 and the terrorist attacks of September 11, 2001.

The FCC had placed a $1.33 billion minimum bid to win this public safety frequency block. That, combined with the untold billions of dollars needed to build and maintain it with may have scared off potential investors in this time of economic downturn. Especially with no immediate way to see a return on the investment.

It also means that for the foreseeable future, Amateur Radio remains the only non centralized fully interoperable emergency communications system in the United States. Hams say that they are more than ready to meet the challenge. (ARNewsline(tm) from published reports)

**

HAM HISTORY: INTERNATIONAL MARCONI DAY - APRIL 26

An important radio celebration is coming up. Jim Davis, W2JKD, has the details:

--

The 21st International Marconi Day event takes place on Saturday, April 26th. This is a 24 hour operating event held annually to celebrate the birth of Guglielmo Marconi which took place on the 25th April 1874.

International Marconi Day is not a contest. Rather, it is an opportunity for radio amateurs around the world to make point-to-point contact with historic Marconi sites using High Frequency communications techniques similar to those used by Marconi. Its also a chance to qualify for an attractive citation for achieving the requisite number of Marconi Award stations worked.

International Marconi Day is usually held on the Saturday closest to Marconi's birthday. Award Stations and rules for International Marconi Day are on line at www.gb4imd.org.uk.

--

Again Marconi Day this year is on Saturday, April 26th and runs for 24 hours. Many commemorative stations around the world will be on to take

part in the celebration. (Southgate)

**

ENFORCEMENT: FLORIDA UNLICENSED BROADCASTER FINED $1500

An unlicensed broadcaster in Florida has been fined $1500. Roubens Maignan of Port Saint Lucie was ordered to pay the forfeiture after the FCC traced a signal on 106.1 MHz to his home.

Maignan was initially hit with a Notice of Apparent Liability for Forfeiture in the amount of ten thousand dollars.. Maignan submitted a response to the N-A-L requesting a reduction or cancellation of the proposed forfeiture. . While de did not dispute the violation but did claim that he did not know that his actions violated the rules or the Communications Act. Maignan also stated that payment of the forfeiture would pose an undue financial hardship to his family.

The FCC says that after examining the financial documentation submitted with the response that a reduction in the amount of the fine to $1500 was appropriate in this case and affirmed that amount. Maignan was given the customary 30 days to pay or to file an appeal. (FCC)

**

ENFORCEMENT: MICHIGAN CB'ER ADMITS USING LINEAR

An unnamed Michigan C-B operator who admitted he was using an illegal amplifier has been warned by the FCC to stop using it and to stop causing interference to his neighbors.

Back on March 26th agents from the Detroit office attempted to inspect the suspected CB station but its owner was not available. In a subsequent March 28th telephone call with an FCC agent, the operator reportedly admitted using a 350 watt CB linear amplifier.

Now, in its April 2nd follow-up letter the FCC has warned the CB'er that operation of the linear constitutes the use of radio transmitting equipment without a valid radio station authorization and that this is a violation of the Federal law. He was told that this could lead to punitive action in the form of monetary fines, seizure of his equipment, and criminal sanctions including imprisonment. The CB operator was ordered to respond back to the FCC and address all of the allegations against him within ten days. (FCC)

**

THE SOCIAL SCENE: SHELBY HAMFEST FOLLOW-UP

A follow-up to last weeks story on the possible closing of the Shelby Hamfest. Despite recent contract disagreements between the Shelby Amateur Radio Club and the Cleveland County Fair Association, plans are continuing to hold the 50 year county tradition that draws electronics aficionados from across the country.

According to a report in the Shelby Star newspaper, Hamfest Chairman Robby Hamrick, WA4RH, is quoted as saying that as far as the Hamfest going on, right now, we're still in the process of planning.

Hamrick told the Star that the Shelby Hamfest has not been cancelled but at the moment the club is unsure as to where it is going to hold it. Hamrick said that the group is looking at all its options.

As previously reported, the Shelby Hamfest will not take place at its usual location because of disagreements with this year's contract conditions set by the fairgrounds association. Decisions on what steps will be taken will be posted to the hamfest website www.shelbyhamfest.com/ as soon as they are available. (Shelby Star, others)

**

THE SOCIAL SCENE: BOXBORO WANTS YOU

While this event is still several months away the planners of the combined Boxboro Hamfest ARRL New England Division Convention are looking for speakers and other participants to fill out the convention program. The event takes place August 22, 23 and 24th at the Holiday Inn Boxboro Woods in Boxborough, Massachusetts.

According to web postings by the planning people, they have some 50 hours of programming to fill. They are looking for programs and presenters with material that will both captivate and entertain an audience to fill these slots.

Also if you are a representative of a club or organization in need of a place to gather, the folks at Boxboro say that they can help facilitate an open or closed meetings by providing a meeting room for Sunday. If you are interested in taking them up on their offer or if you want to present a forum, please contact Boxboro Program Chairman Ken Caruso, WO1N, by e-mail to WO1N at arrl dot net. More convention information is on-line at www.boxboro.org. (Boxboro Hamfest)

**

THE SOCIAL SCENE: MAJOR UK HAMFEAST CANCELLED
Meantime, from across the Atlantic comes word that rising costs and a decline in attendance have lead to the cancellation of the United Kingdom's
Elvaston Castle ham radio rally. At one time the Elvaston Castle rally was the 2nd biggest hamfest in the East Midlands area of the U-K.. (G0EJQ)
**
NAMES IN THE NEWS: ZS1YT INAUGERATED AS NEW SARL PRESIDENT
Some names in the news. First up is Rassie Erasmus, ZS1YT, who has been inaugurated as the new president of the South Africa Radio League. In his inaugural address Erasmus said that Amateur Radio is a foundation for technical knowledge and that it is no secret that many professionals in the field of radio, TV, communications and electronics have started their technical education as young radio amateurs. He said that it should still be used as a unique attraction for future young radio amateurs.

For his Presidential year he has chosen three themes that flow from the organizations slogan of "Amateur Radio Communication Technology in Action." These are growth in the application of new technologies, growth of the radio amateur community in South Africa and growth of the South Africa Radio League membership to the point where we can say we truly represent the Radio Amateurs of South Africa.

Erasmus also paid tribute to the outgoing President Graham Hartlett, ZS6GJH, for his leadership over the past several years. He presented Hartlett with an honorary life membership of the SARL. (SARL)

**

NAMES IN THE NEWS: CELEBRATING WITH A NEW BOOK UNDER THE ICE

Back in the U-S-A, author Don Keith, N4KC, is celebrating the publication of his latest book and the event it details with an on the air operation. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the story on the book and what's to follow:

--

Don Keith's "The Ice Diaries" tells the story of USS Nautilus, the world's first nuclear vessel, and its historic trip to the North Pole in August 1958.
Keith co-wrote it with the late Captain William R. Anderson who was the submarine's skipper for that history-changing mission. It will be released in July 2008 by Thomas Nelson.

And to celebrate its publication, and the 50th anniversary of the Nautilus reaching the North Pole, N4KC will take to the ham radio airways the weekend of August 2 and 3rd. In a cooperative venture with the Southern New England Region of the Navy and Marine Corps Military Affiliate Radio System and the Submarine Base Amateur Radio Club stations, Don will be operating from the grounds of Historic Ship Nautilus and the Submarine Force Museum and Library in Groton, Connecticut.

The on-air operation will use special events call sign N9N. This stands for "Nautilus 90 North," and recalling the historic radio message sent to
President Eisenhower when the ship emerged from beneath the ice pack to announce the mission's success. The North Pole is at 90 degrees north latitude.

Tentative operating frequencies will be 7.279 MHz on 40 meters and 14.243 and 14.343 MHz on 20 meters, depending on prior use and QRM, using SSB. Other bands, modes, and frequencies may also be activated depending on response and demand. Don hopes to work as many of you as he possibly can.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A Special commemorative QSLs will be sent to those who confirm contact and include a self-addressed, stamped envelope. Further information is on-line at www,n4kc.com. (N4KC)

**

BREAK 2

EMERGING TECHNOLOGY: NRSC ANNOUNCES UPDATED IBOC STANDARD

The National Radio Systems Committee has adopted an updated version of its in-band/on-channel or IBOC digital radio broadcasting standard. According to an announcement made at the National Association of Broadcasters convention in Las Vegas, Nevada, the new NRSC-5-B standard includes some editorial updates, as well as a revised FM IBOC RF mask submitted to the NRSC by iBiquity Digital.

iBiquity Digital developed the original HD Radio IBOC technology. The updated standard will be available to the public at the National Radio Systems Committee website in about four weeks. This, following a final procedural review.

For those not aware, the National Radio Systems Committee is a standards-setting body co-sponsored by the National Association of Broadcasters and the Consumer Electronics Association. (NAB-NRSC)

**

HAM HAPPENINGS: THE ARRL AND TAPR DCC WANTS PAPERS

Technical papers are solicited for presentation at the 27th Annual ARRL and TAPR Digital Communications Conference to be held in Chicago from September 26th to the 28t. These papers will also be published in the Conference Proceedings.

Authors do not need to attend the conference to have their paper included in the Proceedings. The submission deadline is July 31, 2008. Papers will be published exactly as submitted and authors will retain all rights.

Please send papers to Maty Weinberg at the ARRL, 225 Main St Newington, CT 0611. Or you can make your submission via e-mail to maty@arrl.org (WB8IMY)

**

HAM RADIO IN SPACE: CALL FOR CUBESAT PROPOSALS

The European Space Agency Education Office has received good response to its call for CubeSat proposals issued last month to universities in ESA

member nations and other cooperating states. This to participate in the development of an educational payload for the maiden flight of the new Vega launch rocket currently scheduled for December.

The launch opportunity on the Vega maiden flight is being offered free of charge for up to 6 CubeSats, with an additional 2 backup CubeSats on back up standby. The ESA Education Office says that it recognizes the growing importance of CubeSat projects as a key tool in providing university students with a valuable hands-on practical education across all space engineering disciplines from end-to-end through the complete space project lifecycle. (ESA)

**

WORLDBEAT INDIA: THE NIAR SLVER JUBILEE
India's National Institute of Amateur Radio will be celebrating its 'Silver Jubilee' in the city of Hyderabad between October 18th to the 20th. To commemorate the event, look for some special activities to take place between October 24th and November 3rd from many locations across India including operations from the Andaman and Nicobar Islands as well as the Lakshadweep Islands.
The National Institute says that it will be assisting foreign amateurs in obtaining reciprocal licenses or operation permits for the VU4 and VU7 activation's. More information is available at www.niar.org. The National Institute of Amateur Radio is India's national Amateur Radio society. (Southgate)
**

WORLDBEAT - IRELAND: ATV REPEATER BACK ON THE AIR

Ireland's EI2WTR fast scan amateur television repeater is back on air from Helvick Head. This after the system was re-housed in separate RF-tight boxes over the winter. The repeater unit consists of a G1MFG Transmitter on 1249 MHz with about 10 watts through to a horizontally polarized slot antenna. It uses a G1MFG Receiver on 1290 MHz from the same antenna through the duplexer. Helvick Head overlooks Dungarvan County in Waterford and is the same site as the 2 metre East Cork voice repeater. (IATV)

**

WORLDBEAT - SCOTLAND: UK FIRST 3 CM FM REPEATER

The first ever 10GHz FM voice repeater in the United Kingdom came on the air on the 14th March. GB3TC, co-sited with GB3CS in Lanarkshire operates on a channel pair of 10.371.1MHz in and 10.471.1MHz out and requires either 103.5Hz sub audible tone or 1750Hz tone burst for access. It also transmits an FM beacon giving its call and locator every 60 seconds when not repeating. More information from www.csfmg.com. (GB2RS)

**

WORLDBEAT - UK: UK REPEATER ON CURFEW TO FIGHT USER ABUSE

A United Kingdom repeater has place a curfew on its operation. This, to combat abuse of the system by some of its users.

According to the GB2RS News Service, the Bristol Channel Repeater, GB3BC, is now being switched off every night from 23.45. The system remains off until 7.00 a.m.. Its administrators say that this operational format will until further notice due to unacceptable levels of night-time repeater abuse.

Unlike in the United States where another repeater might pop on the channel when another goes away, that's not likely to happen in the U-K. This is because repeaters there are individually licensed and the national society rather than members of the ham radio public hold these licenses. A person or group sponsoring a repeater is called a repeater keeper. He, she or they are not licensees.

Also, telecommunications regulator Ofcom is notoriously quick to react against any unlicensed operations within its jurisdiction. (GB2RS)

**

DX

In DX, word from ARRL DXCC Manager Bill Moore, NC1L, that the 2007 G4GIR slash KH9 DXpedition to Wake Island has been approved for DXCC credit. Moore says that if you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk to have your DXCC record updated.

Moore and the ARRL have announced several more operations that have been approved for DXCC credit. These include the : the 2007 5X1NH operation to Uganda,; the 2007 S05A operation to Western Sahara; the 2008 operation to Burundi, as 9UXEV; the 2008 YK9G operation to Syria and the current HZ1PS operation in Saudi Arabia.

In general D-X news, word that seven operators are planning to be active as 4U1VIC from United Nations station in Vienna, Austria during the CQ World Wide CW Contest on May 24th and 25th as a Multi-2 entry. QSL info will be announced at a later date.

Z33F and Z31MM will be active at the 3V8SS Tunisian Scout Club Station between from May 15th to the 26th. Listen out for them on all bands including 30, 17 and 12 meters using CW, SSB, P-S-K and even Slow Scan T-V. QSL 3V8SS via IZ8FWN.

Lastly, word that K9GY, will be back at the YN2N station near Granada between November 22nd and December 1st. He plans to be active during the CQ World Wide DX CW Contest on November 29th and 30t) as a Single-Operator, All-Band, Low-Power entry. Please QSL electronically using the ARRL's Logbook to the World but he will accept and respond to printed QSL's as well.

(Above from various DX News Spources)

THAT FINAL ITEM: HAM WORKING ON CANCER CURE FEATURED ON 60 MINUTES

And finally this week, a ham who has deeply involved himself in finding a cure for cancer was featured on the Sunday, April 13th edition of the CBS news program 60 Minutes. Bill Pasternak, WA6ITF, watched the segment and has more:

--

John Kanzius, K3TUP, of Erie Pennsylvania, has been working on an RF-based treatment for cancer that is currently undergoing testing. Kansius says he was motivated to find a cancer cure after witnessing the pained expressions of children suffering from the disease and undergoing chemotherapy. This at a time when he to was undergoing the same treatment for Leukemia.

Determined that there had to be a better alternative he believed that radio held the key.

Knowing that R-F can heat metal, K3TUP reasoned that a tumor injected with something metallic could be destroyed without harm to the rest of a patients body. The answer to the need for an injectible metal came in the form of recently developed carbon and gold nano-particles that can be introduce directly into a tumor and then radiated with a machine that K3TUP designed and built. Initial experiments on lab animals have proved promise in the system but many more trials are needed before the treatment can be tried on humans.

Cancer researchers interviewed on the program said that they are very excited about John Kanzius discoveries. No research dollars are now flowing into a pair of studies on animals. This, in the hope of refining the system to where it can not just also destroy localized tumor but also to keep the cancer cells from spreading to other parts of the body. Much of the 60 minutes report was dedicated to this ongoing work.

John Kanzius, K3TUP, says he hopes it happens in his lifetime.

At the studio in Los Angeles, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

You can see the segment of 60 minutes in its entirety at http://www.cbsnews.com/stories/2008/04/10/60minutes/main4006951.shtml?source=RSSattr=HOME_4006951

You can read more about John Kanzius, K3TUP, and his ground-breaking idea to kill cancer cells with radio in the February 2008 issue of QST Magazine. (ARNewsline(tm) from various sources)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the

Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www.YHOTY.org.

Also, a reminder of our on-line website poll. This month we are asking how high the price of a gallon of gas has to go before it keeps you from hopping into your car for a ride over to a hamfest. To vote, simply take your web browser to www.arnewsline.org, scroll down until you see the poll area on the left side of the screen and cast your ballot. The real time results that includes your vote will be instantly displayed.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I've one of these sitting on the work bench which doesn't want to "lock".

I've no details beyond the Model (615) and make (QMB Electronics).

I'm not sure if it is modern enough to be designed for 198kHz (rather than the older 200kHz) R4 signal or if it is a 60kHz beast.

The innards don't look overly complex but some other details would save me some time.

Anyone got any details, please?

Sorry, I don't know. It must be a switching
supply instead of just a heat-generating
series regulator.

==> QST CONTRIBUTING EDITOR H. WARD SILVER, N0AX, NAMED HAMVENTION
"AMATEUR OF THE YEAR"

The 2008 Dayton Hamvention Awards Committee has named QST Contributing
Editor and author H. Ward Silver, N0AX, as its 2008 Amateur of the Year.
The committee said Silver's "books and teaching materials have helped
many become hams." Tom McDermott, N5EG, will receive Hamvention's
Technical Achievement Award to recognize his technical contributions
that helped digital ham radio expand. Emery McClendon, KB9IBW, was named
the recipient of the Special Achievement Award for starting Amateur
```

Radio Military Appreciation Day (ARMAD) in 2003 as a way for Amateur Radio to express support and appreciation for our service men and women. The winners will be feted at a dinner held May 17 at the Marriott Hotel in Dayton.

Silver, an ARRL Life Member, was first licensed at age 17 in 1972 as WN0GQP and upgraded to Amateur Extra and changed his call sign to N0AX in 1976. A contester and DXer, he is on the DXCC Honor Roll.

Silver's award nomination cited his "many contributions, including 'Ham Radio for Dummies,' his first effort to show that becoming a ham does not have to be a difficult challenge. His additional books, magazine articles and his 'Hands On Radio' column in QST have all helped many hams develop their knowledge and skills." Silver was awarded the ARRL's Bill Orr, W6SAI, Technical Writing Award in 2003. He is also the editor of the ARRL's Contester's Rate Sheet and the ARRL Antenna Design Course. Silver has also written feature articles and product reviews for QST and compiles QST's "Contest Corral" column.

Silver, who lives on Vashon Island near Seattle, Washington, worked closely with community leaders and the Vashon-Maury Island Radio Club (W7VMI) to provide effective emergency communications. According to the awards committee, radio club members, along with the fire district and the Community Emergency Response Team (CERT), have created one of the "best local communications systems in the state of Washington."

Calling it "really, really nice and a complete honor" to be named Amateur of the Year, Silver told the ARRL that "It's a humbling experience to even be nominated, much less be chosen. To whomever is responsible for the nomination and to the Hamvention Committee, thank you. Receiving the award would be impossible without readers, colleagues, mentors and friends -- so it's just as much for them as it is for me. Being recognized will keep my fires lit to go on producing, strive for better accuracy and clarity and figure out how to make it all be fun, too. I'll just try to act like I deserve it -- most of the time."

The Hamvention Technical Achievement Award goes to Thomas C. McDermott, N5EG, for his "more than 20 years of involvement in projects which further the development of Amateur Radio." According to the awards committee, McDermott co-developed the TexNet packet switching network in 1986; based on datagram routing, it covered much of the South Central United States in the 1990s.

McDermott, an ARRL Life Member, received ARRL's Doug DeMaw, W1FB, Technical Excellence Award in 2004. Licensed for almost 40 years, McDermott is a member of the IEEE and holds a bachelor's in electrical engineering. His Amateur Radio interests lie in HF digital communications, hardware and software design, and an occasional HF contest.

McDermott was the founder of the Texas Packet Radio Society. As part of that group, he designed the hardware and some of the protocols for the TexNet packet switching network; he has been involved in numerous Tucson Area Packet Radio (TAPR) projects and has written a textbook on wireless communications. McDermott holds eight patents.

Emery McClendon, KB9IBW, is to receive the Hamvention award for Special Achievement for his efforts in starting Amateur Radio Military Appreciation Day (ARMAD) in 2003. He said he started ARMAD "as a way to have Amateur Radio serve as a tool for the people of our communities to be able to express 'live' support and appreciation for our troops, veterans, retired military and first responders." McClendon, of Fort Wayne, Indiana, became an Amateur Radio operator 16 years ago. His interest in organizing Military Special Events derives from his four years of service in the US Air Force and two years in the Indiana Air National Guard.

Amateur Radio Military Appreciation Day has become a popular event, spreading to other communities. Several military support groups have developed an interest in having Amateur Radio as a part of their activities. According to McClendon's award nomination, this has resulted in introducing Amateur Radio "to thousands of people worldwide who otherwise would have never known about our public service."

McClendon is active with two local Amateur Radio clubs; he also gives presentations about Amateur Radio to community groups. His activities, including ARMAD, have resulted in many TV, radio and media stories during the past five years, giving exposure to the Amateur Radio community.

Hamvention Chairman Carl Rose, K8CPR, praised the winners, saying: "On behalf of the Dayton Amateur Radio Association and Hamvention 2008, it is my pleasure to congratulate this year's award winners. I ask all hams to join me in recognizing the outstanding contributions and the many years of service the winners have given to the Amateur Radio Service." The world's largest Amateur Radio gathering, Hamvention attracts more than 20,000 people to the greater Dayton area each spring. Dayton Hamvention is May 16-18 at Hara Arena near Dayton, Ohio.

==> ARRL TEACHERS INSTITUTE OFF TO A GREAT START

The first of six Teachers Institutes in 2008 -- hosted by the Museum of Science & Technology in Tampa, Florida -- wrapped up April 10. The 11 participating teachers came away from the experience with a multitude of ideas to improve their classroom instruction. According to Mark Spencer, WA8SME, Director of the ARRL Teachers Institute on Wireless Technology, the four-day institute "focuses on the science of radio, bringing space technology into the classroom, microcontroller basics and basic robotics with emphasis not only on the basic concepts, but also teaching strategies to bring those concepts into the classroom."

Spencer said the Teachers Institute curriculum is an ever-evolving process; this year, a radio telescope project was added that can be used

to demonstrate the fundamentals of radio astronomy. The "Soldering 101" unit was enhanced with the addition of a 24-hour clock kit that the teachers construct and learn how to solder in the process. Finally, a BOT Instructor's Board was added to enhance the teacher's ability to instruct basic robotics. Spencer said he designed and developed the BOT board to "tie all the different pillars of the Teachers Institute into one umbrella activity that teachers can use to pull the school year together. The board also can be used to instruct the individual components of robotics, as well as instruct TV remote technology." Spencer said he added an ATV component with the board: "There is a lot of stuff going on with this particular resource."

The Teachers Institute isn't all inside classroom work. The teachers participate in a fox-hunt activity, take part in ham satellite QSOs and observe the collection of satellite imagery transmitted by NOAA satellites -- just as they can do in their classrooms.

Here are a few of the comments from the first 2008 Teachers Institute participants that summarize their experience:

"One of the other teachers in our Academy of Engineering and Design Technology class has applied to attend the Teachers Institute in Dayton this summer. She is excited about the class after hearing of it and seeing my show-and-tell session."

"We are working on robots now in my class and will be well entrenched by the end of this school year. Next year promises to be fun and exciting for the students. The Teachers Institute was a great experience, and the personal tutelage was responsible for making it so."

"Wonderful doesn't begin to describe it. I knew the basics of radio communications and transmission through electromagnetic waves, but I now understand it better than I ever have. The robot was very cool -- it reinvigorated my love of programming. It only took me four attempts to run the maze perfectly! I also made many contacts that I will use to help throughout my teaching career!"

"The instructor is great, absolutely great -- proof that if you do what you love, you'll love what you do!"

"Thanks again for the wonderful experience. I am looking forward to implementing what I learned in the classroom. Please let me know if you will be offering any follow up institutes."

The remaining Institutes for 2008 are just about filled to capacity, Spencer said. "Though the application deadline is May 15, the available seats filled up fast. If you are a teacher, or know of a teacher who could benefit from the experience, don't wait to submit an application for the few remaining seats. If you can't make it this year, perhaps next year. We are adding two additional instructors in anticipation of expanding the program in the future."

Five more Teachers Institutes are scheduled for 2008: June 16-19 in Rocklin, California at the Parallax Facility; June 25-28 in Tucson, Arizona at Pueblo Magnet High School; July 14-17 in Dayton, Ohio at P&R Communications, and July 28-31 and August 4-7 in Newington, Connecticut at ARRL Headquarters. Enrollment in these four-day expenses paid sessions is limited to 12 participants each. Application deadline is May 15, 2008. Applicants must be an active teacher at elementary, middle or high school level, or hold a leadership position in an enrichment or after-school program; an Amateur Radio license is not required. For more information, please visit the Teachers Institute Web site <http://www.arrl.org/FandES/tbp/ti.html>.

==> ARRL DIAMOND TERRACE GROWS

Spring is finally here and it's that time -- time to expand the Diamond Terrace at ARRL. "We've been waiting all winter for the opportunity to add new inscribed bricks and today's the day," said ARRL Chief Development Officer Mary Hobart, K1MMH. "Since the last installation in the fall of 2007, we've been accumulating bricks from Diamond Club donors who have donated generously to honor their own call sign or that of an Elmer, friend or family member." The 150 bricks were moved Thursday, April 17 to the Terrace area in preparation for the masons to arrive early Friday morning to begin work.

Hobart said this installation is not the end of the project: "The Diamond Terrace project continues as long as members want to place bricks -- or we run out of space! We continue to receive requests from individuals as well as clubs to place bricks in the Terrace, so the project is still growing. Now is the perfect time to renew or join the Diamond Club -- or upgrade -- at the Brass Level so that we can install bricks over the next six months or so."

The terrace ultimately will consist of 5000 bricks. "We hope it will be a catalyst for growth, and that many members will support this effort," she said.

For a minimum donation of $250 to the ARRL Diamond Club, donors will receive one personalized brick to be placed in the Diamond Terrace. Donors may request up to three lines of 16 characters (spaces and punctuation included) per line on each brick, although the more lines, the smaller the characters. Legends may consist of a call sign or a name -- or both -- or a club name and call sign and even a year. Diamond Club members contributing $250 or more each year may add a new brick, or bricks, to the terrace.

There is no limit to the number of bricks a Diamond Club member may place on the Terrace. Brick requests will be accumulated throughout the year and placed in the Diamond Terrace starting in late spring of each year. Bricks will be set in sand and are treated to withstand a harsh New England winter.

The Diamond Terrace recognizes donors wishing to venerate their own call signs or to honor or memorialize the call sign of a family member, club

or "Elmer" (mentor) bricks. "I have heard wonderful stories from donors who are honoring their Elmer or a family member, and clubs who are honoring a founder or influential leader. There is no limit to the reasons why bricks are placed to honor a call sign," Hobart said.

Especially generous donors may wish to donate a garden bench to The Diamond Terrace at ARRL for an initial donation of $10,000. "Six garden benches of Vermont granite, the capstone of the Terrace, have been placed, thanks to the contributions of six incredibly generous hams," Hobart said. Bench donors include Frank Butler, W4RH; Larry Price, W4RA; Dick Isely, W9GIG; Paul Rinaldo, W4RI; Mike Zak, W1MU, and the Hollywood Hills QRP Contest Club.

"We had plans to refurbish the Headquarters entrance area, so this was an ideal opportunity to invite our members to participate in the project and supporting League programs at the same time," said Hobart. "We want to grow the Diamond Club, which enables the ARRL to continue programs that require revenue above and beyond what annual dues provide, ensuring their long-term health and enabling the League to do more on behalf of Amateur Radio."

When the ARRL Diamond Terrace was officially opened in July 2007, ARRL Chief Executive Officer David Sumner, K1ZZ, said, "All of us who work here in Newington get to enjoy the Diamond Terrace every day when we come to work. We get to walk through a greatly enhanced entrance that sends the right message to staff and to our members, as well as visitors, about the character and tradition of our organization."

ARRL President Joel Harrison, W5ZN, concurred: "When you talk to the average ham out on the street, and you ask him what's important to him in Amateur Radio, he will tell you, 'I want to go into my shack, I want to turn on my radio and I want to get on the air. I want to enjoy Amateur Radio. You take care of that for me. You are my organization, the ARRL; you handle that for me.'"

Harrison continued that in order for that to happen, a lot of work takes place behind the scenes. "With all that we have going on in Washington, nationally, with all the attacks on Amateur Radio's resources, it takes people like you in Newington, it takes people like we have on the Board of Directors and most importantly, it takes people who donate to our development program to make that all happen. The Diamond Terrace is just one part of that, and it's a successful part. It adds a lot of meaning to Amateur Radio and to the ARRL. From the bottom of my heart, I want to say 'thank you' to every one of our donors."

Diamond Club enrollment ($75-$249 per year for regular members; $50 annually for Life Members) includes ARRL full-member benefits, including QST. The Diamond Club now has more than 2000 members, and the unrestricted funds it takes in support such ARRL activities as spectrum defense, educational initiatives, field services, DXCC, publications, contesting and the ARRL Volunteer Examiner Coordinator among others, Hobart points out. "You pick an area that's near and dear to your heart,

and Diamond Club revenue is very likely supporting it."

The ARRL Diamond Terrace, built by Robert Antonello and Son, under the watchful eye of ARRL Building Manager, Greg Kwasowski, W1GJK, and Hobart, is a lasting tribute to Amateur Radio and the ARRL. "I hope that those who are fortunate to visit ARRL Headquarters will enjoy the new look of their Amateur Radio home. It has been a pleasure to work with each Diamond Club donor to craft the engraving for their brick, and I hope many can come and see the terrace personally," Hobart said.

Contact Hobart by telephone (860-594-0397) or e-mail <k1mmh@arrl.org> or visit the ARRL Web site <https://www.arrl.org/forms/development/donations/diamondclub/diamond.html> to learn more or to sign up for your Diamond Club membership and Diamond Terrace brick.

==> AMATEUR RADIO "WELL REPRESENTED" AT NATIONAL HURRICANE CONFERENCE

More than 2000 people attended the 30th Annual National Hurricane Conference in Orlando, Florida March 31-April 4. Conference Chairman Max Mayfield stated in his opening remarks that he was pleased to see such a turnout, despite the fact that the 2007 hurricane season didn't impact the United States as in past years. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, attended on behalf of the League.

According to Dura, Amateur Radio was well represented in the pre-Conference training with a variety of presentations. The National Hurricane Center (NHC) maintains a fully equipped and functional Amateur Radio station at its headquarters, WX4NHC. Station coordinators John McHugh, K4AG, and Julio Ripoll, WD4R, provided a comprehensive overview of the activities of the NHC, emphasizing the interaction and importance of Amateur Radio in the forecasting of tropical events. McHugh further detailed the Caribbean Amateur Radio Meteorological Emergency Network (CARMEN) program, discussing how the program in its current stage can use revitalization and rebuilding to provide improved information to the NHC.

Director of Operations for the VoIP Hurricane Net Rob Macedo, KD1CY, presented a detailed overview of the system that integrates EchoLink and the Internet Radio Linking Project (IRLP). "For the past few years," Dura said, "this operation has been building to become another reliable source of information for the National Hurricane Center."

Dura and Macedo offered the final Amateur Radio presentation of the Conference, "Disaster Intelligence and Situational Awareness Utilizing Amateur Radio." This discussion went beyond the traditional uses of Amateur Radio into the areas of damage assessment, infrastructure monitoring, communications systems replacement and rapid situational analyses, Dura said.

According to Dura, NHC Director Bill Read, KB5FYA, has had an active past using Amateur Radio at NWS facilities. "He personally utilized ham radio during SKYWARN activations dealing with severe weather. He

completely understands and acknowledges the vital role we play in providing the National Hurricane Center through WX4NHC. He hopes to have some time in his new role to actually get on the air with the hams of WX4NHC and once again use our tremendous resource of information gathering," Dura said.

During the Conference, Read praised Amateur Radio, saying, "Ham radio has always played a critical role in emergencies. What goes out when you have a high wind event or major flooding is the communications system, so you lose even cell phones, landline phones, commercial radio and TV. In those cases, ham radio operators that can put up emergency transmitters and antennas in the wake of a storm can give us reports that are valuable. They also help in the search and rescue efforts in the aftermath."

==> FORUM SCHEDULE ANNOUNCED FOR DAYTON HAMVENTION

One of the many highlights at Dayton Hamvention is the myriad of educational and fun forums that take place the entire weekend at Hara Arena. The Dayton Amateur Radio Association has coordinated 46 unique programs that encompass nearly 80 hours of programs and activities for the thousands of people expected to attend these programs. Hamvention, the largest event of its kind, will be May 16-18 at Hara Arena in Dayton Ohio. Please keep in mind that the schedule may change before Hamvention.

Friday, May 16
9:15-10:45 AM - TAPR Digital Forum (Room 1)
9:15-10:15 AM - ARRL Public Relations -- Making It Work for You Locally (Room 2)
9:15-10:15 AM - Lightning Protection for the Shack (Room 3)
9:15-10:15 AM - National Frequency Coordinators Council (Room 5)
10:30-11:30 AM - ARRL Member Forum (Room 2)
10:30-11:30 AM - Teachers Workshop (Room 3)
10:30-11:30 AM - SATERN -- Salvation Army Team Emergency Network (Room 5)
11 AM-1 PM - D-STAR Forum (Room 1)
11:45 AM-1 PM - Kit Building (Room 2)
11:45 AM-12:45 PM - The Evolution of the National Traffic System (Room 3)
11:45 AM-12:45 PM - SHARES Forum (Room 5)
1:15-2:15 PM - Balloon Forum (Room 1)
1:15-2:15 PM - APRS - Automatic Position Reporting System (Room 2)
1-2:30 PM - Ham Radio and the Law (Room 3)
1-2 PM - QRP Forum (Room 5)
2:15-3:15 - Young Ladies Radio League (Room 5)
2:30-3:45 PM - Drake Forum (Room 2)
2:45-3:45 - Gordon West -- Digital Signal Processing Speakers (Room 3)
3:30-5 PM - Test Equipment for Hams (Room 5)
4-5 PM - Amplitude Modulation Forum (Room 2)
4-5 PM - 10-10 International Forum (Room 3)

Saturday, May 17
9-10 AM - How Ham Radio Meets Boy Scouts, or Adventures with Elmer Baden-Powell (Room 2)
9-10 AM - MARS Tri-Service Forum (Room 3)
9-11:30 AM - Software Defined Radio Forum (Room 1)
9-11:30 AM - AMSAT Forum (Room 5)
10:15-11:15 - Don't Tell Me It Can't Be Done! (Room 2)
10:15-11:15 AM - ARES Forum (Room 3)
11:30 AM-12:15 PM - ARRL Radiosport Forum (Room 2)
11:30 AM-1:45 PM - 2008 Ham Radio Town Meeting (Room 3)
11:45 AM-1:45 PM - ATV (Fast Scan Amateur Television) Forum (Room 5)
11:45 AM-2:15 PM - Contesting Forum (Room 1)
12:30-1:30 PM - RTTY Forum (Room 2)
1:45-2:45 PM - MIDCARS (Room 2)
2-3 PM - ARRL Technology Task Force (Room 5)
2-3:15 - FCC Forum with Riley Hollingsworth (Room 3)
2:30-5 PM - DX Forum (Room 1)
3-5 PM - UHF/VHF/Microwave Forum (Room 2)
3:15-5 PM - Youth in Amateur Radio Forum (Room 5)
3:30-5 PM - SSTV Forum (Room 3)

Sunday, May 18
9:15-10:15 AM - ARRL and the Mars Desert Research Station (Room 1)
9:15-10:15 AM - Collins Radio Forum (Room 2)
9:15-10:15 - The Role of Ham Radio in Red Cross Chapter Communications (Room 3)
9:30-11:15 AM - Bicycle Mobile Forum (Room 5)
10:30-11:30 - ARRL Digital Forum (Room 1)
10:30-11:30 AM - Techniques of the Best Operators (Room 2)
10:30-11:30 AM - Ohio MARS Forum (Room 3)

For more information on forums at the 2008 Dayton Hamvention, please visit the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/forums/index.html>.

==> INTERNATIONAL MARCONI DAY EVENT IS APRIL 26

Special event stations will be on the air Saturday, April 26 (UTC), to mark International Marconi Day (IMD), a 24-hour Amateur Radio event commemorating the birth of wireless pioneer Guglielmo Marconi on April 25, 1874.

Participants can qualify for awards by making contacts on 160 through 10 meters (CW, SSB and digital) with designated IMD stations operating on or near a site where Marconi carried out experiments or where Marconi equipment was used prior to his death in 1937. The sponsoring Cornish Radio Amateur Club (CRAC) will operate GB4IMD from Pendennis Castle, Falmouth, Cornwall, overlooking Falmouth Harbour where Marconi spent some 10 days aboard his yacht in April 1923.

Additional IMD stations will be on the air from the UK, the US, Canada, South America, Australia and Europe. The IMD Web site has a list of IMD 2008 award stations <http://www.gb4imd.org.uk/awardstns.htm>.

On the US side, the Marconi Cape Cod Radio Club, KM1CC, will participate at the Coast Guard Station on Coast Guard Beach in Eastham, Massachusetts, just south of Marconi's original 1903 station on Cape Cod.

If you would like to operate an IMD 2008 award station, register your station prior to the event, providing full details <webmaster@gb4imd.org.uk>. More information on International Marconi Day can be found on the IMD Web site <http://www.gb4imd.org.uk/>.

==>SOLAR UPDATE

Tad "Wild men who caught and sang the Sun in flight" Cook, K7RA, this week reports: We saw a string of zero-sunspot days over the past couple of weeks, but this week saw a brief but significant sunspot that lasted only a couple of days. Sunspot 990 emerged as a tiny speck over April 14-15, but it was definitely a Solar Cycle 24 spot. Not only was the polarity of this region correct for the new Cycle, but it was far north above the Sun's equator, which is what we expect for a sunspot from an emerging solar cycle. The only previous Cycle 24 activity was close to the solar equator. Sunspot numbers for April 10-16 were 0, 0, 0, 0, 11, 12 and 0 with a mean of 3.3. The 10.7 cm flux was 67.9, 67.1, 68.2, 69.3, 68.5, 69.2 and 69.5 with a mean of 68.5. Estimated planetary A indices were 8, 4, 11, 7, 2, 5 and 15 with a mean of 7.4. Estimated mid-latitude A indices were 6, 3, 8, 6, 2, 3 and 9, with a mean of 5.3. Geophysical Institute Prague predicts quiet conditions April 18, quiet to unsettled April 19, quiet April 20, quiet to unsettled April 21, active April 22-23 and unsettled to active April 24. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the Holyland DX Contest, the TARA Skirmish Digital Prefix Contest, the ES Open HF Championship, the Feld Hell Sprint and the EU Spring Sprint (SSB) on April 19. The Michigan QSO Party, the EA-QRP CW Contest, the Ontario QSO Party and the YU DX Contest are April 19-20. The Run for the Bacon QRP Contest is April 21. The SKCC Sprint is April 23 and the RSGB 80 Meter Club Championship (Data) is April 24. Next weekend, the SP DX RTTY Contest, the Helvetia Contest, the QRP to the Field contest and the Florida QSO Party are all scheduled for April 26-27. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 4, 2008, for these online course sessions beginning on Friday, May 16, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* New Apparel Items Now Available from ARRL: Show off your ham radio pride with ARRL's new line of HAM apparel. The new shirt, sweatshirt and ball cap feature the very popular oval Euro design with "HAM" emblazoned in the center and the ARRL Web site address centered underneath it. The T shirt is a pre-shrunk black Hanes beefy-T with white contrast stitching. The HAM oval is screenprinted on the left chest. This trendy T shirt comes in unisex sizes from small to 3X for only $12.95 each. The heavyweight black sweatshirt features a quarter-zip neckline with a brass metal zipper and leather pull. The HAM oval is embroidered on the left chest. This sweatshirt is perfect for the still chilly nights of spring and comes in unisex sizes from small to 3X for only $34.95 each. The black ballcap features the HAM oval embroidered in the center of the cap. With an adjustable Velcro tab closure, this cap is sure to fit just about anyone. Get yours for only $12.95. Receive a free HAM Euro sticker (a $2 value) <http://www.arrl.org/catalog/?item=9595> when you order one of these three HAM items before May 31, 2008. Order your HAM items today <http://www.arrl.org/catalog/?item=NO-HAM#top>.

* JARL Operating Award Checking Available at Hamvention: A representative of the Japan Amateur Radio League (JARL) will be available at Dayton Hamvention May 16-18 to check applications for JARL awards and to issue certificates for certain awards (AJD, WAJA, JCC, JCG, ADXA and ADXA-Half). Those with 10 JA QSL cards each of the 10 JA districts can apply for the All Japan District Award (AJD) at Hamvention. Former JARL executive director and renowned DXer Masa Ebisawa, JA1DM, will be at Booth 484 in the Ballarena of Hara Arena, near ARRL EXPO 2008. Applications for other JARL awards can be checked at the JARL booth, and awards will be mailed from JARL headquarters. Masa also will be ready to answer questions on JARL activities as well as reciprocal licensing in Japan. Applicants do not need to present QSL

cards when applying for awards, but they must submit a QSL card list, sign a declaration that they possess all necessary QSL cards and be able to present any card at JARL's request. The QSL card list should include: call sign, date, band, mode and entity (or other data required by each award). Applicants may use a DXCC Record Sheet for their QSL card list. The fee for each award is $14.

* Mexico Group On the Air for World Amateur Radio Day: Amateurs all over the world are getting into the spirit of the 83rd World Amateur Radio Day on April 18. Grupo DXXE <http://www.dxxe.org> of Mexico will be on the air with a special call sign, XE83IARU, that day in honor of the IARU and World Amateur Radio Day. For those pursuing the DXXE award, organizers state this is a valid station for that award. Information on the DXXE Award (in both Spanish and English) is available on the DXEE Web site <http://www.dxxe.org/index6.html>. QSL via Richard Moen, N7RO, 2935 Plymouth Dr, Bellingham, WA 98225.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, has announced that the following operations have been approved for DXCC credit: the 2007 operation to Uganda, 5X1NH; the 2007 operation to Western Sahara, S05A; the 2008 operation to Burundi, 9UXEV; the 2008 operation to Syria, YK9G, and the ongoing operation of HZ1PS in Saudi Arabia. If you have cards rejected or have any questions concerning these operations, please e-mail the DXCC Desk <dxcc@arrl.org>.

* ARRL Discontinuing Web Classified Ads: As of April 30, 2008, the ARRL will discontinue the "Radios On-Line" section of the ARRL Web site.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Interesting! Your car being much more quiet might be the result of a
couple things. It is quite possible that you done good in the purchase.
Another possibility is that the bugcatchers are kind of a tour de force
in mobile antennas, and are designed to push every parameter in order to
maximaze efficiency as much as possible in the HF-unfriendly dimensions
available. High-Q coils (which even screwdrivers lack) and the necessary
short lengths of the entire antenna make all mobile HF setups pretty
marginal.I'm one inch short of the maximum height allowed for a vehicle
on US roads. The penalty for this is that the bugcatcher tunes extremely
sharply. I have 2 taps on the coil for 75 meters, and I'd probably need
several more to extend to 80 meters. On 40 and up, one tap per band is
usually sufficient.

http://www.w5dxp.com/shootout.htm

Has some results of a shootout of various mobile antennas.

Now all that being said, there is a lot of work in putting my HF mobile setup together. I wanted/needed to tweak out every bit of performance available for mobile contesting, and was willing to put the time into it, which ended up being quite a lot of time. I did get to try it out in the CAQSO party, and it worked okay on 20 meters, PA to CA. I got good signal reports up and down the east coast on 40. On 80, well, they didn't ever ask me to repeat myself. But anything below 40 meters is dicey in operating mobile. I didn't get to use it in the PAQSO which was my main reason for putting it together, due to a death in the family. Later this year, I'll do a more scientific test, as much as one can be done with antennas by someone without access to an antenna range....

And oh yeah - the bugcatcher is quite a sight, especially on a little Suziki Vitara, even more so, with a 20 inch capacity hat on it. Not everyone wants to look like that.

2002 Ford Focus ZX3. Not selected for RF quietness. (when I bought it I had no plans to operate mobile below 144MHz) Obviously it *is* reasonably quiet in terms of radiated RF, though conducted RF into the AM BCB radio is pretty bad! (often the IC-706, with a 40m Hamstick, receives AM BCB stations better than the car's own radio.....)

Unfortunately it's got 150,000 miles now & I'm starting to think about the next vehicle. Guess I should take along the TH-F6 and a dozen feet of wire or something.

At least on 40 that's wider than my Hamstick. Two settings are necessary for useful operation across the band (one for CW and one for phone) and even that's marginal. Never tried 80 without the tuner. 20/15/10 are indeed useful without retuning.

My solution was to buy a LDG AT-7000 autotuner. I didn't expect much. (just to be able to get full power from 7000 to 7050 without stopping to retune) I have been VERY happily surprised. Not only does the tuner promptly present a decent match to the radio across the entire 40m band without adjusting the antenna, but efficiency is quite reasonable. No problems in working DX from 7000 to 7300. With the 20m Hamstick in place the autotuner also allows work on 30 and 17m - not very well, but it *is* possible to make QSOs.

The efficiency may not be the best. But it does work, and pretty well.

Mine kinda grew out of a FT-8900R installation. Was enjoying the heck ou
t
of 10m FM (and 6) but they weren't open enough. So I bought the 706 &
started gradually adding bands.

It probably would have made more sense to buy a Bugcatcher. (probably
cheaper than five Hamsticks and an autotuner)

Have used it in the TN QSO Party to the tune of 300-something QSOs. Also
the KY contest two years ago.

> And oh yeah - the bugcatcher is quite a sight, especially on a little
> Suziki Vitara, even more so, with a 20 inch capacity hat on it. Not

One day with a previous mobile, I was listening to 27.185 for some reason
& heard a couple of truckers commenting about the "weird porcupine car"
with all the antennas. This thing probably triggers similar comments.
BCB rubber duckie, VHF/UHF tribander (antenna handles 222 but the radio
doesn't...), HF antenna, and then a second 2m antenna for occasional APRS
.
Then if the bike rack is on the car.....

Changes followed by "|".

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Amateur Radio Newsline" Report 1602 - April 25, 2008

Amateur Radio Newsline report number 1602 with a release date of Friday, April 25tht, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC will netcast its meeting to revise the Emergency Alert System, a not so funny intruder to 70 centimeters down-under, changes in the rules for Field Day 2008 and Newsline's e-mail is spoofed. Find out the details on Amateur Radio Newsline" report number 1602 coming your way right now.

RESCUE RADIO: FCC TO WEBCAST EAS PLANNING SUMMIT MAY 19

The Federal Communications Commissions Public Safety and Homeland Security Bureau will webcast a Summit on the nations Emergency Alert System on Monday, May 19th. Bill Pasternak, WA6ITF, reports:

--

In line with the Commissions July 2007 Second Report and Order on the Emergency Alert System, the Summit discussions will focus on the current state of the nations E-A-S and what is needed to transition it to a more robust, Next Generation alert and warning system. One that will help ensure that all citizens receive accurate and timely information during emergencies.

The Summit will be open to the public; admittance however will be limited to the seating available. The venue is Commission Meeting Room at the FCC's Washington D.C. headquarters building from 9:00 a.m. to 12:45 p.m. Eastern Daylight Time. Those individuals who are interested in attending may pre-register on-line at: http://www.fcc.gov/pshs/summits/eas . The deadline for pre-registration is Thursday, May 15, 2008.

As mentioned there will be streaming Audio and Video coverage of the meeting. It will be carried live with open captioning over the Internet from the FCC's web page at www.fcc.gov.realaudio Access to webcast is free to the public and does not require pre-registration.

Whether or not the ARRL, REACT or any personal radio emergency communications organization will be a part of this gathering? That not known at this point in time.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

Again, that E-A-S planning meeting is Monday, May 19th. The Commission says that it will release additional information and an agenda in the near future. (FCC)

**

ALERT: NEWSLINE E-MAIL BEING SPOOFED

Amateur Radio Newsline's e-mail addrsss has been spoofed and yoy may have been the target.

If you received an unexpected e-mail with our return address of newsline@arnewsline.org with a message written in Cyrillic Rusiam and asking you to call a strange telephone number, delete that e-mail at once. Its not from us and there is every reason to believe that calling that phone number could be a hoax or scam.

Every once in a while spammers and Internet scammers randomly pick an e-mail address and use it to send outs thousands if not 10's of thousands or even millions of pieces of spam e-mail. This week it appears to be our turn.

We found out about it when several hundred bounced e-mail filled our incoming mailbox on Wednesday the 23rd. We notified our I-S-P but in reality all that can be done is to wait for the spoofing attack to pass.

Meantime, if you were one of those who received the Russian spam, just delete it because it was not from us. Also, remember this general Internet safety rule. Never, ever click on any link in any e-mail that you are not expecting, even if you know the person who sent it. There is no way to know if that e-mail is real or just another web spoof like the one our e-mail address was used for this past week.

Be wise. Do not click any link or call any phone numbers that came unsolicited. Make Internet safety your top priority and you will not only protect your computer but also your personal information as well. Information that the crooks on the Internet will stop at nothing to get. (ARNewsline")

**

BREAKING DX NEWS: GLORIOSO ISLAND OPERATION POSTPONED AGAIN

If you have been one of those patiently waiting for Glorioso Island to come on the air, you are going to have to wait a bit longer. This is because the DXpedition to Glorioso originally scheduled for May 6th to June 6th has been postponed once again.

The reason this time is construction. Starting in June a number of new tropical storms shelters will be built on Glorioso. The work will take at least two and a half months. Due to the large number of workers on the island during the construction the authorities decided to postpone the DXpedition until the work has been completed.

The exact dates for the Dxpedition to take place will be determined by the availability of transportation to and from Glorioso. The operators say that they hope to accomplish the operation by the end of September or the beginning of October at the latest. We will have more D-X related news later on in this weeks Amateur Radio Newsline report. (DXNL)

**

ON THE AIR: RULES CHANGES FOR FIELD DAY 2008

Three major changes have been announced in the rules guiding this years ARRL Field Day.

First is that the Demonstration Mode bonuses have been replaced by an Educational Activities bonus.

Second, The Get On The Air or G-O-T-A station may now also operate on the VHF bands but only one band at a time.

Lastly, a newly licensed amateur who has received his or her ticket dince Field Day 2007 may operate the G-O-T-A station regardless of license class, but this does not apply to upgrades. The League says that an upgrade is not the same as a new license.

Field Day 2008 runs from 1800 U-T-C on June 28th to 2100 U-T-C on June 29th. The complete rules are on the ARRL's website at www.arrl.org/contests/rules/2008/fd.html. You can also find them starting on page 81 of the May issue of QST magazine. (ARRL)

**

RADIO ON THE WEB: ARRL TO DISCONTINUE RADIOS ON-LINE LISTINGS

Call this a case of a few spoiling it for the many. The few are those arrogant hams who have insisted that the ARRL rules regarding what is permissible to post on the ARRL's Radios On-Line web ads does not apply to them.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, the ARRL has experienced an increased number of complaints by members and users of the service. This, regarding postings and practices that do not conform to the Radios On-Line Web site's original intent.

According to Kramer, despite efforts to regularly monitor the site problems have continued. These include postings for guns and other personal ads. Kramer says that the ARRL staff that administers this service has deleted these items and notified the 'poster.' A day or two later they find the ads back on the site and placed in every category.

Kramer says that the ARRL is spending far to much time dealing with this matter and making it is no longer worth the cost of maintaining the service. So as of April 30th the ARRL says that it will discontinue listing classified ads in the Radios On-Line are of its website.

As we said, it only take a very few to spoil it for the many. (ARRL)

**

ENFORCEMENT: A COMEDY INTRUDER DOWN-UNDER

It was no laughing matter when signals popped up on 70cm band during the recent Melbourne Comedy Festival down-under. But the Australian Commuications and Media Authority -- the ACMA -- wasted little time in dispoing of this one. Jim Linton, VK3PC, f the WIA News reports"

--

Staff of a security company were equipped with imported Chinese made hand-helds radios. They believed they were CB radios and okay to use for communications on the streets of Central Melbourne.

The ACMA acted quickly on reports of the intruders and was taking appropriate action to ensure compliance with the Radiocommunications Act.

The fear among the amateur radio community is that this incident could be just the start of many more commercial uses of similar radios.

That fear comes amid reports of another intrusion on the 70cm for valet parking at a major Melbourne entertainment complex.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

Whether you live in Australia, Europe, here in the U-S-A or anywhere else there is a good chance that attempting to engage pirate operations like this in on-air discussion may be a breach of our amateur license conditions. That means holding a QSOI with the intruder could get you into as much trouble as the unlicensed station with the cheapo H-T. (WIA News)

**

ENFORCEMENT: COMPASSIONATE FCC FINES UNLICENSED BROADCASTER ONLY $100

The FCC has shown a lot of compassion as it issued and affirmed a monetary forfeiture in the amount of only $100 to Dwayne Simon of California. This, for operating an unlicensed radio transmitter on 95.9 MHz in Lancaster area.

Simon had originally been issued a Notice to Apparent Liability in the amount of $10,000. This following a December 30, 2006 visit by FCC agents from the Enforcement Bureaus Los Angeles office. During their visit the agents interviewed Simon and inspected the station. During the questioning Simon acknowledged that he was aware of the Commissions requirement for a

license to broadcast. He also said that he was aware of the Commissions enforcement efforts against other pirate broadcasters in the Lancaster area.

Before leaving, the agents issued an on-scene Notice of Unlicensed Operation to Simon. At the end of the interview Simon told the agents that he would not operate the station again and indicated that he would pursue an Internet-based radio station as an alternative.

But Simon apparently did not keep that promise. On April 6, 2007, Los Angeles agents again visited Simon and inspected his station. Simon again acknowledged operating the unlicensed station on 95.9 MHz.

On June 18, 2007, the Los Angeles Office issued a Notice of Apparent Liability in the amount of $10,000 to Simon. In his Response, Simon did not dispute the facts outlined in the proposed fine. Instead he apologized for his actions and stated that he had dismantled his transmitter. He also asserted an inability to pay the forfeiture and supplied personal financial information to support this claim.

The FCC says that in analyzing Simons financial hardship claim that it found it to be true and warranted a reduction in the amount of the fine. In this case to the amount of $100 which Simnon was given 30 days to pay or to file a further appeal. (FCC)

**

THE SOCIAL SCENE: SHELBY HAMFEST ANNOUNCES ITS NEW VENUE

The Shelby Hamfest will be heading a few miles East to a new venue. This with word that the Shelby Amateur Radio Club will hold the 52nd Annual Shelby Hamfest at Biggerstaff Park also called Gaston County Park. in Dallas, North Carolina instead of the Cleveland County Fairgrounds closer to Shelby.

As previously reported, the separation stems from earlier contract disputes between the club and the Cleveland County Fair Association. New contract stipulations for the fairgrounds put Hamfest in jeopardy. The radio club thought the fair association's contract changes were unacceptable, leading to a stalemate. The club was beginning to wonder if they would be able to hold this years hamfest but it didn't take long for Gaston County to take interest. As a result the new home for the Shelby Hamfest will be Dallas Park.

The Shelby Hamfest is one of the oldest and largest in the United States. It was first held at Shelby City Park and began as a one-day event attended by less than 100 people. The Hamfest eventually outgrew the City Park and moved to Bracketts Cedar Park in Casar, North Carolina. By 1979, it had outgrown Bracketts and moved to the Fairgrounds. In that time the event has grown to where it attracts between 8000 to 12000 over the Labor Day weekend. According to amateur radio operators who have attended since its beginning, one of the major reasons for its growth and continued success has been the small town friendly feeling that visitors enjoy. (Cleveland County Star)

**

THE SOCIAL SCENE: AMSAT / TAPR BANQUET AT HAMVENTION 2008

The second annual AMSAT/TAPR Banquet will be held during Dayton Hamvention on Friday evening at the Kohler Presidental Banquet Center, Kettering, Ohio. The evening will begin with a cash bar at 6:30 PM. Dinner will be served at 7:15.. Please contact martha@amsat.org at the AMSAT office for information or call to make reservations. (ANS)

**

NAMES IN THE NEWS: SHES THE ONE WHO DID IT - ON STILTS

A staff member of the Radio Society of Great Britain staff set a new world record in the recent London Marathon. Not for the speed in which she ran it, Rather 21 year old Michelle Frost's name has gone down in the Guinness Book of Records as the first person ever to complete the 26 mile course while running on 4 foot high circus stilts.

Frost of Bristol, took part in the marathon to raise money for REACH. This is an organization which helps children with upper limb deficiencies.

Prior to the race beginning she told the BBC that it was a bit of a spur of the moment idea because she could already stilt walk, and I thought she would give it a try. To find out more, and to sponsor Michelle, go to www.justgiving.com/rainbowdave. (RSGB)

**

NAMES IN THE NEWS: W3HC RETIRES AS QSL MANAGER

Carl Mc Daniel, W3HC, is retiring as a QSL Manager and that the QSL Manager's Society is acquiring all of the logs and cards from him. All callsigns he was overseeing will be assigned to new managers however it will take some time to sort and make the changes.

Bob Schenck, N2OO, says that anyone who has already sent a QSL via W3HC does not need to re-send it. All mail already received by W3HC will also be passed along to whomever gets assigned as that calls manager. Thus far the currently active callsigns CO6AP, 7X5VRK, PY2KC, YL2EC, TU2XZ, PT5T, PS2T and ZY100S will be handled by Kim Larsen via N3SL. (OPDX)

**

NAMES IN THE NEWS: K1AKS RETURNS AS SM OF NEW HAMPSHIRE

Al Shuman, K1AKS, of New Boston, New Hampshire, has been appointed ARRL Section Manager of the New Hampshire Section, effective April 21. The League announced the appointment after Sterling Eanes, AK1K, decided to step down due to mounting work responsibilities and other commitments.

Shuman previously served as New Hampshire Section Manager for two previous terms. These were from December 1992 to June 1999 and October 2000 to June 2005. His latest term of office continues through June 30, 2009. (ARRL)

**

THE SOCIAL SCENE: CSVHFS IN KANSAS IN JULY

The Central States VHF Society is calling for the submission of papers and presentations for the upcoming 42nd Annual Central States VHF Society Conference to be held in Wichita, Kansas fro, July 24th to the 26th. Papers and presentations are solicited on both the technical and operational aspects of VHF, UHF and Microwave weak signal amateur radio. The deadline for the submission of papers and presentations is May 15th. More is on-line at
<http://www.csvhfs.org/conference/callforpapers.html>http://www.csvhfs.org/conference/callforpapers.html
(CSVHFS)

HAM HAPPENINGS: NET COMMEMORATES TEXAS INDEPENDENCE

On Sunday April 20th, the Texas Heritage Net commemorated the final battle for Texas independence. The combat took place on April 21, 1836, at a place called San Jacinto. Thats where General Sam Houston and less than 900 men defeated Santa Anna's Army and won Texas independence.

Lamar Denby of Huntington, Texas, whose call sign is KD5HLB, served as net control station. Denby is the great-great grandson of Lt. Col. Moses F. Roberts, who fought in the battle of San Jacinto and later served in the Congress of the Republic of Texas. While in office Roberts worked with Sam Houston pushing for the annexation of Texas to the United States.

There were 22 participants for the net. Each will receive a commemorative QSL card. The Texas Heritage Net meets each Sunday evening at 8:00 PM CST on 7 point 227 MHz. (QRZ.com)

EMERGING TECHNOLOGY: NEW VERSION OF FDMDV RELEASED

A new version of the Digital Voice software FDMDV is now available for download . FDMDV allows you to transmit and receive Digital Voice simply by hooking up your PC to a standard High Frequency S-S-B transceiver.

As reported in past newscasts, the key advantage of mode is that it's transmitted bandwidth is less than half that of S-S-B, just 1 point 1 kHz. The new version FDMDV 1 point 2 along with updated documentation can be downloaded from n1su.com/fdmdv. (Via e-mail)

HAM RADIO IN SPACE: AMSAT AUSTRALIA AND OZSATGROUP MERGE

Two ham radio in space names that are well known down-under have merged. AMSAT-Australia and the Ozsatgroup have combined into a new gorganization, but one that has retained the name AMSAT-Australia.

The two organizations have been working together for more than twenty-four months, and have been discussing such an amalgamation for some time. The decision to go ahead with the merger was made after Graham Ratcliff, VK5AGR formally tended his resignation as AMSAT-Australia National Coordinator and

as AMSAT Coordinator for the Wireless Institute of Australia at the WIA Federal Convention on Monday, April 7th.

The role of AMSAT-Australia National Coordinator for the new organization has been taken on by Paul Paradigm, VK2TXT. Paradigm was formally the Coordinator of the Ozsatgroup. He has been joined by Judy Williams, VK2TJU in the role of AMSAT-Australia Secretary. (WIA)

RADIO IN SPACE: RADIO BELOW MARS SURFACE

A radar device co-sponsored by NASA on the European Space Agency's Mars Express orbiter has looked beneath the surface of Mars.

The radar sounder on Mars Express is the Mars Advanced Radar for Subsurface and Ionospheric Imaging was built to map the distribution of liquid and frozen water in upper portions of the planet's crust. A complementary radar sounder, the Shallow Subsurface Radar on NASA's Mars Reconnaissance Orbiter uses a different frequency to see greater detail but to a lesser depth. The two signals are then radioed back to Earth for scientific analysis.

As these two instruments continue to provide data, the understanding that they provide about how planetary radar sounders work is prompting ideas for using the technology to explore beneath the surfaces of bodies. These include Jupiter's moon Europa, Saturn's moons Titan and Enceladus, as well as asteroids and comets. (NASA/Jet Propulsion Laboratory Release)

WORLDBEAT - UK: RSGB MOVES TO NEW HOME IN BEDFORD

Turning to news from other parrts of the globe, we start with word that the Radio Society of Great Britain was completely closed from Friday April 18th to Friday April 25th. This was to permit the U-K national society to relocate from its old home at Potters Bar to s new location in the city of Bedford.

Normal operations should resume on Monday April 28th but they ask members to delay any non-urgent business until Wednesday the 30th Because of the move there were to be no updates to the RSGB web site from the 21st to the 25th of April. There was also noGB2RS bulletin on Sunday April 27th. (RSGB)

**.

WORLDBEAT - EAST TIMOR: BRINGING HAM RADIO TO THE NATION

Spain's national society, the Union de Radioaficionados Espanoles or U-R-E has announced a new educational project in East Timor to take place in June. The U-R-E's Radiosolidarity Department will organize a DXpedition combined with activities to promote Amateur Radio in East Timor. This will include the donation of a complete Amateur Radio station at the University of Dili. The Spanish national society hopes that operating alongside students and teachers of the Electrical Engineering and other departments

will help make amateur radio a permanent way of life in East Timor. More details and up-to-date information is now available at www.ure.es/hf/eadx/expediciones/4w2008/home.php?lang=en

(URE)

WORLDBEAT - SINGAPORE: FUND FOR SPECIAL PROJECTS FOUNDED BY 9V1UV

Singapore amateur K.C. Selvadurai, 9V1UV, has donated $5000 to IARU Region 3. This, to establish a special fund that will enable the regions directors undertake tasks or projects that can better achieve its missions and goals. In making the donation Selva as he I better known expressed the hope that others may also contribute to the new fund. (Southgate)

**

WORLDBEAT - FINLAND EDXC TO MEET IN SEPTEMBER

The 2008 European DX Council or EDXC Conference will be held 5th to the 7th of September in Vaasa, Finland. Organized by the Finnish DX Association as the 50th Anniversary meeting of the club, the conference takes place at the Best Western Hotel Silveria with many activities already planned. More about the event is on line at www.netikka.net/edxc2008/ (Southgate)

**

WORLDBEAT - THE NETHERLANDS: DUTCH VERON ELECTS NEW LEADERS

From the Netherlands comes word that Remy Denker, PA3AGF, is the new president to the Dutch national Amateur Radio society the VERON. Denker replaces outgoing president Dick Harms, PA2DW, who did not seek reelection.

Elected to serve as 1st Vice President is Guido van den Berg, PA0GMM. Jan Janssen, PA0JMG, has taked the 2nd Vice Presidents slot with Peter de , PA3CWS, elected as the VERON's new Treasirer.

The elections took place at the society's Annual General Meeting on Saturday April 19th. More information is on line at www.veron.nl (Southgate)

**

DX

In DX word that N5FF should be in Damascus and should be active again as YK1BA until May 2nd. He will return home to Texas on May 3rd. As usual, the purpose of the trip is not a DXpedition, so his operating will be spotty. However he hopes to be able to operate at least 3-4 hours a day. QSL via N5FF.

A 6 meter DXpedition to Sable Island is scheduled to take place from June 25th through the 7th of July. VE3IKV, K5AND and W3CMP will be active there as CY0X using CW SSB. Operation will also occur on 20m and 40m, but at a lower priority than six. For more information go to www.cy0x.com.

Cards for the A52AM operation from Bhutan are not valid for DXCC. The

reason given is that because the license was revoked this is considered as an unauthorized operation. For more details, you can view the official paperwork from the Bhutan Department of Post and Telecommunications at www.darc.de/ausland/new/auslref_dokumente/bicma_a52am.pdf

As of April 22nd, N9QGU is on the air from St, Martin on 20, 15 and 10 meters SSB for about two weeks. He will have time to operate only during his early morning and late afternoon hours. QSL as directed on the air.

Lastly, members of the United Kingdom's Grantham Amateur Radio Club are going to Lunga Isle from the 12th to the 17th of June. No callsigns announced yet. More information is on the club website at www.garc.org.uk.

(From various DX news sources)

THAT FINAL ITEM: LEARNING MORSE THROUGH SONG

And finally this week, a new song and video about rebuilding a ham radio contest station while at the same time teaches the viewer the Morse code will soon be here. Its from a musical group called the Ham Band. Lissa Ladefoged, of the Ham Band gives us a bit of background on what lead to the song being written and the video being produced:

--

Lissa: "What happened was that we had a small fore in the shack. The fire was caused by an electrical short. So, we actually had to empty the shack. This gave us the opportunity to completely rebuild and we filmed the whole process from the burying of a huge copper grounding plate and the rewiring of all the filters and switches and the installation of rhe three HF stations. Finally the whole station was given a workout by our team in several contests."

--

For those of you new to the the hobby, the Ham Band is a group of musicians based in Denmark who do music about ham radio. Andrew John Huddleston, OZ1XJ is the groups leader and his fife Lissa Ladefoged is they key soloist. They are the only group to ever release an C-D that consists only of songs about ham radio. Called Seek You -- it was introduced several years ago at the Dayton Hamvention and was a sell-out. Since then the groups on-line video single titled "Come And Join Us On The Airwaves" has been at the top of the YouTube charts with over 90,000 views so far. Lissa says the new song could set a record, but not in the way you might think:

--

Lissa: "The song is in three styles. First we have the French musette. And then the Viennese waltz and we wind up with the German oom-pah. Each verse introduces letters and numbers in Morse code so that all numbers and letters are mentioned in the course of the 15 minute song. The song also changes key twenty-four times se we expect to get into the Guinnes Book of Records."

--

Andrew and Lisa say that they hope you will enjoy the new song's preview video. Its on-line at the YouTube at www.youtube.com/watch?v=9s49tnxT8F8 (ARNewsline")

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www.YHOTY.org.

Also, a reminder of our on-line website poll. This month we are asking how high the price of a gallon of gas has to go before it keeps you from hopping into your car for a ride over to a hamfest. To vote, simply take your web browser to www.arnewsline.org, scroll down until you see the poll area on the left side of the screen and cast your ballot. The real time results that includes your vote will be instantly displayed.

For now, with Bill Pasternak, WA6ITF, at the editors desk, Im Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> COURT FINDS FCC VIOLATED ADMINISTRATIVE PROCEDURE ACT IN BPL
DECISION

The US Court of Appeals for the District of Columbia Circuit today
released its decision
<http://pacer.cadc.uscourts.gov/common/opinions/200804/06-1343-1112979.p
df> on the ARRL's Petition for Review of the FCC's Orders adopting rules
governing broadband over power line (BPL) systems. The Court agreed with
the ARRL on two major points and remanded the rules to the Commission.
Writing for the three-judge panel of Circuit Judges Rogers, Tatel and
Kavanaugh, Judge Rogers summarized: "The Commission failed to satisfy
the notice and comment requirements of the Administrative Procedure Act
```

('APA') by redacting studies on which it relied in promulgating the rule and failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions."

The Court agreed with the ARRL that the FCC had failed to comply with the APA by not fully disclosing for public comment the staff studies on which it relied. The Court also agreed with the ARRL that the Commission erred in not providing a reasoned justification for its choice of an extrapolation factor of 40 dB per decade for Access BPL systems and in offering "no reasoned explanation for its dismissal of empirical data that was submitted at its invitation." The Court was not persuaded by the ARRL's arguments on two other points, on which it found that the Commission had acted within its discretion.

The conclusion that the FCC violated the APA hinges on case law. "It would appear to be a fairly obvious proposition that studies upon which an agency relies in promulgating a rule must be made available during the rulemaking in order to afford interested persons meaningful notice and an opportunity for comment," the Court said, adding that "there is no APA precedent allowing an agency to cherry-pick a study on which it has chosen to rely in part."

The Court continued, "The League has met its burden to demonstrate prejudice by showing that it 'ha[s] something useful to say' regarding the unredacted studies [citation omitted] that may allow it to 'mount a credible challenge' if given the opportunity to comment." Information withheld by the Commission included material under the headings "New Information Arguing for Caution on HF BPL" and "BPL Spectrum Tradeoffs." The Court concluded that "no precedent sanctions such a 'hide and seek' application of the APA's notice and comment requirements."

With regard to the extrapolation factor, the Court ordered: "On remand, the Commission shall either provide a reasoned justification for retaining an extrapolation factor of 40 dB per decade for Access BPL systems sufficient to indicate that it has grappled with the 2005 studies, or adopt another factor and provide a reasoned explanation for it." The studies in question were conducted by the Office of Communications, the FCC's counterpart in the United Kingdom, and were submitted by the ARRL, along with the League's own analysis showing that an extrapolation factor closer to 20 dB per decade was more appropriate, as part of the record in its petition for reconsideration of the FCC's BPL Order. The Court said that the FCC "summarily dismissed" this data in a manner that "cannot substitute for a reasoned explanation." The Court also noted that the record in the FCC proceeding included a study by the National Telecommunications and Information Administration that "itself casts doubt on the Commission's decision."

The briefs for the ARRL were prepared by a team of attorneys at WilmerHale, a firm with extensive appellate experience, with assistance from ARRL General Counsel Christopher D. Imlay, W3KD. Oral argument for the ARRL was conducted by Jonathan J. Frankel of WilmerHale. Oral argument was heard on October 23, 2007; the Court's decision was

released more than six months later.

After reading the decision, General Counsel Imlay observed, "The decision of the Court of Appeals, though long in coming, was well worth the wait. It is obvious that the FCC was overzealous in its advocacy of BPL, and that resulted in a rather blatant cover-up of the technical facts surrounding its interference potential. Both BPL and Amateur Radio would be better off had the FCC dealt with the interference potential in an honest and forthright manner at the outset. Now there is an opportunity to finally establish some rules that will allow BPL to proceed, if it can in configurations that don't expose licensed radio services to preclusive interference in the HF bands."

ARRL Chief Executive Officer David Sumner, K1ZZ, added: "We are gratified that the Court decided to hold the FCC's feet to the fire on such a technical issue as the 40 dB per decade extrapolation factor. It is also gratifying to read the Court's strong support for the principles underlying the Administrative Procedure Act. Now that the Commission has been ordered to do what it should have done in the first place, we look forward to participating in the proceedings on remand, and to helping to craft rules that will provide licensed radio services with the interference protection they are entitled to under law."

ARRL President Joel Harrison, W5ZN, concluded: "I am very pleased that the Court saw through the FCC's smoke screen and its withholding of valid engineering data that may contradict their position that the interference potential of BPL to Amateur Radio and public safety communications is minimal. The remand back to the FCC regarding their use of an inappropriate extrapolation factor validates the technical competence of Amateur Radio operators and especially of the ARRL Lab under the direction of Ed Hare, W1RFI. We are grateful for the work of our legal team and especially for the unflagging support of the ARRL membership as we fought the odds in pursuing this appeal."

==> COUNTING DOWN TO DAYTON HAMVENTION

With less than one month to go, everyone wants to know what's new in the ARRL EXPO <http://www.arrl.org/expo> at the 2008 Dayton Hamvention <http://www.hamvention.org>. Who's going to be there? What's happening and when? We here at HQ are gearing up for an exciting time in the ARRL EXPO in Ballarena Hall at Dayton's Hara Arena, and mixing up a bit of the old and the new.

ARRL Membership Manager and ARRL EXPO Coordinator Katie Breen, W1KRB, said, "We have many new publications and apparel items that we are proud to introduce. A highlight is always in the annual release of the '2008/2009 ARRL Repeater Directory' -- new to this year's edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized book is one-half inch bigger."

If you are interested in learning about more tools with which to enjoy Amateur Radio, then the new "VHF Digital Handbook" or "HF Digital Handbook" by QST Editor Steve Ford, WB8IMY, should go home with you! If you'd like a terrific resource of materials spanning a variety of topics, then "Hands-On Radio Experiments" by H. Ward Silver, N0AX, is right up your alley. "We here at ARRL are very proud of Ward's selection as Hamvention's Amateur of the Year," Breen said. "Come meet him and have him autograph your new book."

Breen said that new ARRL mugs and clothing items will be introduced at Dayton this year: "Demonstrate your pride as a radio amateur in your office or your shack. While you're at it, show off being a ham in our new 'HAM' logoed apparel or 2008 Field Day apparel. And to top it all off, it will all go home with you in our new environmentally friendly, reusable bag." All those who purchase $10 or more in the ARRL EXPO will receive a complimentary reusable eco-friendly bag that you can take home and use when grocery shopping and more. All new and renewing ARRL members will also receive this new bag, Breen said.

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. "You've read the column in QST for years and everyone always wants to know who is behind the costume. Here's your chance to stop by the booth, ask your question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST," Breen added.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG. On Saturday, automotive experts Mark Steffka, WW8MS, and Don Hibbard, W8DBH, will be on hand to answer your questions. They will be at the Doctor Booth, as well as providing an interactive session in the ARRL Movie Room about mobile Amateur Radio and ignition systems.

Breen said that the Movie Room, a new feature of this year's ARRL EXPO, will host a presentation on "40 Years of the Worked All Europe Contest" presented by Jorg Jahrig, DJ3HW, and Dennis M. Haertig, DL7RBI, of Deutscher Amateur Radio Club (DARC), the German equivalent of ARRL. The movie room will also host a variety of DXpedition videos, Breen said. "The highlight of the video presentations will be with Bob Allphin, K4UEE. Bob will host an interactive session during the viewing of the video of the Peter I DXpedition to the Antarctic. Sit back, relax and enjoy in the new ARRL Movie Room."

The 2008 Dayton Hamvention is May 16, 17 and 18 at the Hara Arena in Dayton, Ohio. Find out about activities within and in conjunction with Hamvention at the Dayton Hamvention's Web site <http://www.hamvention.org>.

==> ARRL LAB TEST ENGINEER LEAVES HQ STAFF

After more than 17 years at ARRL, Laboratory Test Engineer Mike Tracy, KC1SX, is leaving the HQ Family and moving to New Jersey to take on a

position with Synergy Microwave <http://www.synergymwave.com/>, a company owned by Dr Ulrich Rohde, N1UL.

Tracy came to the League in 1991 as the night/weekend operator for W1AW. It wasn't long before the W1AW Chief Operator recognized his talent for more technical applications; when a position in the ARRL Lab opened up in 1993, he recommended that Tracy apply. "I did, and was quickly accepted as the new Technical Information Services Coordinator where I handled many of the technical questions of members and referred others to those more knowledgeable on particular subjects. I also developed some databases and other resources to help in the process of answering members' questions," Tracy said. In 1997 when the Lab Test Engineer Mike Gruber, W1MG, stepped down, Tracy switched seats yet again, testing Product Review equipment.

ARRL Lab Manager Ed Hare, W1RFI, said, "When Mike came to the ARRL Lab, he was our Technical Information Coordinator where he helped maintain the TIS Web pages <http://www.arrl.org/tis/>, as well as helping to field technical questions for members. Over the years, Mike, as Lab Test Engineer, helped modernize the test process through new test equipment, new test software and new test methods. In between all that, he always found the time somehow to write articles, watch over the technical content of ARRL's advertising and help other staff more often than his job may have required.

"One of the most pleasant parts of any manager's job is to hear good things about his or her staff. When Mike was in the Lab, my job was pleasant, as staff often told me about how he had helped them above and beyond the call of duty," Hare said.

"Mike's shoes will be hard to fill," Hare said, "but we have hired Bob Allison, WB1GCM, to do just that." Allison, a ham for almost 35 years, most recently worked for a Hartford television station, WVIT, NBC 30, for the past 28 years. Over those years, he has done a lot of things at the station, from testing the television transmitter to day-to-day maintenance of the studio facilities; this, said Hare, "has prepared him to take over this important job in the Lab."

Allison, an ARRL member, has served as a volunteer tour guide at ARRL <http://www.arrl.org/news/stories/2006/08/07/2/>, offering members a friendly and informative tour of HQ that they will remember for a long time to come. "Although he is new at being an HQ employee, we all feel that he has been part of the family for a while," said Hare. Allison and his wife, Logbook of The World Specialist Kathy, KA1RWY, reside in Coventry, Connecticut. Allison also enjoys sailing and working on Model A Fords.

Allison said, "I have been active on the air since I was first licensed as WN1TDN in 1974, where I enjoy operating, experimenting and meeting people from around the world. I can't say what ham band I like best, except all of them. While I enjoy restoring old radios, I very much enjoy the new ones and digital modes such as PSK-31. I am honored and

humbled to be part of the ARRL Laboratory Staff and I'm looking forward to serving our members and testing some really cool, new radios!"

Tracy, whose last day at ARRL is today, said, "The various responsibilities I have held over 17 years at ARRL have taught me volumes about the League's membership, Amateur Radio in general and many, many different technical topics related to the Service. The support I received from other HQ staff was invaluable, and I will long remember my time here."

==> ANTENNA EXPERT L. B. CEBIK, W4RNL (SK)

L. B. Cebik, W4RNL, ARRL Technical Advisor and antenna authority, passed away last week of natural causes. He was 68. An ARRL Life Member, Cebik was known to many hams for the numerous articles he wrote on antennas and antenna modeling. He had articles published in most of the US ham journals, including QST, QEX, NCJ, CQ, Communications Quarterly, Ham Radio, 73, QRP Quarterly, Radio-Electronics and QRPp. Larry Wolfgang, WR1B, QEX Editor, called Cebik "probably the most widely published and often read author of Amateur Radio antenna articles ever to write on the subject."

Cebik lived in Knoxville, Tennessee and wrote more than a dozen books on antennas for both the beginner and the advanced student. Among his books are a basic tutorial in the use of NEC antenna modeling software and compilations of his many shorter pieces. A teacher for more than 30 years, Cebik was retired, but served as Professor Emeritus of philosophy at the University of Tennessee, Knoxville. Cebik served his country in the US Air Force from 1957-1961, specializing in air traffic control.

One of Cebik's last articles for QST, "A New Spin on the Big Wheel," appeared in the March 2008 issue. The article, co-written with Bob Cerreto, WA1FXT, looked at a three dipole array for 2 meters. This was a follow-up to their article in the January/February issue of QEX that featured omnidirectional horizontally polarized antennas. Cebik authored the "Antenna Options" column for QEX.

Former ARRL Senior Assistant Technical Editor Dean Straw, N6BV, and editor of "The ARRL Antenna Book," said: "LB will be greatly missed by the thousands of hams he's helped through his incredibly prolific -- and invariably proficient -- writing about antennas. LB helped me personally in numerous ways while I worked on antenna matters at the League, always communicating with a gentle, scholarly attitude and a real eye for detail. I'm in shock at the news of LB's passing. May his soul rest in peace."

Licensed since 1954, Cebik served as Technical Editor for "antenneX Magazine" <http://www.antennex.com>. According to Jack L. Stone, publisher of antenneX, he had not heard from Cebik for a few days and became worried: "I called the Sheriff in Knoxville to go check on him since I hadn't heard from him in over 5 days, either e-mail or phone, which is highly unusual. The Sheriff [went to Cebik's house to check on

him and] called back to tell me the sad, devastating news. As his publisher of books, monthly columns, feature articles and software/models for more than 10 years, we communicated almost daily during that span of time. Not hearing from him for that long was unusual, causing my concern. He was like family to me and was loved and respected by so many."

Cebik maintained a Web site <http://www.cebik.com>, a virtual treasure trove to anyone interested in antennas. Besides a few notes on the history of radio work and other bits that Cebik called "semi-technical oddities," the collection contains information of interest to radio amateurs and professionals interested in antennas, antenna modeling and related subjects, such as antenna tuners and impedance matching. Cebik said that his notes were "geared to helping other radio amateurs and antenna enthusiasts discover what I have managed to uncover over the years -- and then to go well beyond."

His Web site also contains information on antenna modeling. His book, "Basic Antenna Modeling: A Hands-On Tutorial" for Nittany-Scientific's NEC-Win Plus NEC-2 antenna modeling software, contains models in .NEC format for over 150 exercises. "Since the principles in the book apply to any modeling software," Cebik said, "I have also created the same exercise models in the EZNEC format. For more advanced modelers using either NEC-2 or NEC-4, I have prepared an additional volume, "Intermediate Antenna Modeling: A Hands-On Tutorial," based on Nittany-Scientific's NEC-Win Pro and GNEC. The volume includes hundreds of antenna models used in the text to demonstrate virtually the complete command set (along with similarities and differences) used by both cores."

ARRL Contributing Editor H. Ward Silver, N0AX, said, "LB typified generosity. He was always developing material that was published widely. Furthermore, the quality of the articles and concepts was always high, but the writing was such that an audience with a wide range of technical backgrounds could understand it. His Web site is a Solomon's Treasure of solid antenna information -- available to all."

Wolfgang remembered Cebik, saying, "L. B. was an ARRL Technical Advisor, with expertise in antenna modeling and design. I learned that I could count on L. B. to offer clear, concise comments on any submitted article dealing with antennas. He was always a friendly voice on the other end of my phone line when I needed to talk to an expert, and I came to expect a quick e-mailed response to any antenna questions that I sent him. L. B. was so much more than an antenna author, though. He was one of the first ARRL Educational Advisors I ever had the pleasure of working with when I became editor of the ARRL study materials. He played a key role in helping develop the concept of online courses when ARRL began to study the idea of the Continuing Education program <http://www.arrl.org/cce/courses.html>; his Antenna Modeling course has been one of the most popular offerings in the program. L. B. leaves a legacy of friendly advice and Amateur Radio wisdom. I will miss him as a

friend and as an advisor."

Cebik's niece, Gina Robeson, also of Knoxville, told the ARRL that her uncle "was amazing to me in a different way than hams viewed him. But he was a legend to me and to the thousands of amateurs whose lives he touched with his work. To me he was my uncle, teacher, friend and confidant. He was a wonderful man, but his family did not really know about the ham side of him."

Robeson said her family spent each Christmas with Cebik and his wife Jean; Jean passed away in 2002 from cancer. "It was always the greatest fun with all the food and family getting together. It did not matter if we were getting together as a group or if it was just me and Uncle Roy, he always had the time to listen and offer advice. He will be sorely missed."

A memorial service for Cebik will be held Sunday, April 27 at 1 PM at Mynatt Funeral Home, 2829 Rennoc Road in Knoxville. Cebik will be cremated and his ashes scattered in his garden, the same place his wife's ashes were scattered. "They will once more be together," Robeson said.

==> WHAT'S COMING UP IN THE MAY/JUNE ISSUE OF QEX

The May/June issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, James Ahlstrom, N2ADR, describes his software defined radio (SDR) transmitter in "An All-Digital SSB Exciter for HF." Juan Jose de Onate, M0MWA, and Xavier R. Junque de Fortuny present a useful accessory for software defined radios and analog receivers, with "A Software Controlled Radio Preselector." Cornell Drentea, KW7CD, concludes the series on his high performance "Star-10 Transceiver -- Part 3." After presenting schematic diagrams of the rest of the main sub-assemblies, KW7CD describes the outstanding test-lab performance of his radio.

James D. Hagerty, WA1FFL, updates his January 2002 QST project with "An Advanced Direct-Digital VFO." Contributing Editor L. B. Cebik, W4RNL (SK), looks at the physical operation of various antenna "reflectors" in "Antenna Options," and Contributing Editor Raymond Mack, W5IFS, tells about a new source for UHF and microwave semiconductors, unusual local sources for meter fuses and magnet wire, and describes some new Atmel microcontroller design tools in "Out of the Box."

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Author's Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First

Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> GET READY FOR THE 2008 HURRICANE SEASON

It's that time of year when preparation for the hurricane season ratchets up -- earlier this month, Orlando, Florida hosted the 30th annual National Hurricane Conference, and state and county Emergency Management Agencies are currently checking plans and assets for the upcoming season. Rick Palm, K1CE, editor of the ARRL's ARES E-Letter, said, "Now is the time for ARES members to assess their portfolio of communications equipment and disaster response knowledge." Hurricane season runs June 1-November 30.

Palm gives several tips for amateurs involved with hurricane operations:

* Monitor major HF hurricane networks during events this season. The Hurricane Watch Net on 14.325 MHz, is one of several key players. It serves either the Atlantic or Pacific during a watch or warning period and coordinates with the National Hurricane Center (NHC) in Miami. Frequent, detailed information is issued on nets when storms pose a threat to the US mainland. In addition to hurricane spotting, local communicators may announce that residents have evacuated from low-lying flood areas. Other amateurs across the country can help by relaying information, keeping the net frequency clear and by listening. See the Hurricane Watch Net's Web site <http://www.hwn.org/> for more information. The net works closely with the hams at the NHC's Amateur Radio station WX4NHC <http://www.wx4nhc.com/>

* The SATERN Net (Salvation Army Team Emergency Radio Network) provides emergency communication support to the Salvation Army and populations at large. They also handle health-and-welfare traffic. SATERN holds high profile nets on 20 meters (14.265 MHz) during major hurricanes and has a long history of excellence, discipline and service. Refer to the SATERN Web site <http://www.satern.org/> for more information.

* The Maritime Mobile Service Net (MMSN) meets on 14.300 MHz and is composed of hams who serve and assist those in need of communications on the high seas. According to its Web site <http://www.mmsn.org/>, the primary purpose of the net is for handling traffic from maritime mobile stations. The network is recognized by the United States Coast Guard and has an excellent working relationship with that agency. The MMSN has handled hundreds of incidents involving vessels in distress and medical emergencies in remote locations, as well as passing health and welfare traffic in and out of affected areas. They also work closely with the NWS and NHC by relaying weather reports from maritime stations.

* The VoIP SKYWARN and Hurricane Net operates by combining both the EchoLink and IRLP linked repeater networks, while handling critical wide area communications during major severe weather and tropical events.

These operations have gained national stature in recent years and provide excellent service. Whenever tropical weather is imposing a threat to the US mainland and certain other areas of interest, the VoIP WX-NET will be fully operational. See the VoIP SKYWARN and Hurricane Net Web site <http://www.voipwx.net/> for more information.

Palm said that during hurricane events, there are usually two or three regional nets (usually on 40 or 20 meters) that spring to prominence as major key assets to the disaster response on an ad hoc basis. "Watch for these nets, as well as the nationally recognized networks described above, this season. Don't transmit on their frequencies unless you are absolutely sure you have something substantive to add, and then only under the direction of the net control station," Palm advised.

If you are interested in Emergency Communications, please be sure to check out the monthly ARES E-Letter. You can elect to receive this newsletter via e-mail by going to the Member Data Page <http://www.arrl.org/members-only/memdata.html> on the ARRL Web site.

==>SOLAR UPDATE

Tad "Great is the Sun, and wide he goes" Cook, K7RA, this week reports: This week we had a couple of brief sunspot appearances -- 991 and 992 -- but they were both from Solar Cycle 23 and their emergence was fleeting. On Wednesday, April 23, the planetary A index rose to 32 due to a solar wind and south-pointing Interplanetary Magnetic Field (IMF). Expect geomagnetic conditions to stabilize this weekend, but to again become active on May 2. Sunspot numbers for April 17-23 were 0, 0, 13, 12, 0, 13 and 13 with a mean of 7.3. The 10.7 cm flux was 69.2, 70.2, 71, 70.8, 70.9, 71.3 and 70.7 with a mean of 70.6. Estimated planetary A indices were 8, 6, 5, 4, 4, 5 and 32 with a mean of 9.1. Estimated mid-latitude A indices were 7, 5, 6, 1, 3, 4 and 17, with a mean of 6.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the SP DX RTTY Contest, the Helvetia Contest, the QRP to the Field contest, the Nebraska QSO Party and the Florida QSO Party are all scheduled for April 26-27. The AGCW QRP/QRP Party and the QRP Minimal Art Session are both May 1. Next weekend is the NCCC Sprint Ladder on May 2. On May 3-4, be on the lookout for the MARAC SSB QSO Party, the MARAC CW QSO Party, the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the 7th Call Area QSO Party, the Portuguese Navy Day Contest, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party. The RSGB 80 Meter Club Championship (SSB) is May 5. All times listed are

UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 4, 2008, for these online course sessions beginning on Friday, May 16, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Hamvention Traffic Updates: With less than 20 days before the 2008 Dayton Hamvention, there is one small hitch, according to Hamvention organizers: road construction, and lots of it. "One of the main surface streets used by attendees of Hamvention every year is Needmore Road since it is almost a straight shot from I-75 (exit 58) to Hara Arena," said Hamvention Talk-In Chairman Rob Lunsford, KB8UEY. "Unfortunately, a rebuild project has begun on this roadway right in the travel path to Hara; it will be down to one lane each way for during Hamvention." There is also construction at the north end of the Downtown Dayton area (about the 53 to 56 mile markers on Interstate 75), Lunsford said. "In this area, the Ohio Department of Transportation has started a multi-year, multi-phase reconstruction of I-75 in which there are lane restrictions, bridge replacements and various other adjacent projects. These projects are much overdue and will, in the long run, drastically improve travel in the area. Unfortunately, for now we are faced with these projects in high volume areas that are already prone to trouble from even the slightest traffic issue. To assist everyone involved we are asking that those attending Hamvention please try to avoid these areas if possible. Our hope is that if we minimize our traffic in the area, and a problem does occur, we do not make it worse with our increased traffic flow." Lunsford said that individuals traveling on I-70 will not need to make any changes from years past. For more information or if you have questions feel free to contact Lunsford via e-mail

<talkin@hamvention.org>. Once in the Dayton area and you find you need assistance, Lunsford advises tuning to 146.940- for further assistance. Directions to Hara Arena can be found on the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/accommodations/directions08.htm>.

* New Section Manager Appointed in New Hampshire: Al Shuman, K1AKS, of New Boston, New Hampshire, has been appointed Section Manager of the New Hampshire Section, effective April 21. ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, in consultation with New England Division Director Tom Frenaye, K1KI, announced the appointment after Sterling Eanes, AK1K, of Hollis, Section Manager since July 2005, decided to step down due to mounting work responsibilities and other commitments. Shuman served as New Hampshire Section Manager for two previous terms: December 1992-June 1999 and October 2000-June 2005. His term of office continues through June 30, 2009.

* ARRL to Discontinue Web Classifieds: As of April 30, ARRL will cease listing classified ads in Radios On-Line, the classified ad section on the ARRL Web site <http://www.arrl.org/RadiosOnline/>. According to ARRL Chief Operating Officer Harold Kramer, WJ1B, the ARRL has experienced an increased number of complaints by members and users regarding postings and practices that do not conform to the Radios On-Line Web site's original intent: "Despite our efforts to monitor the site regularly, these problems persist. These have included postings for guns and 'personal' ads. Our staff that administers this service has deleted items and notified the 'poster,' only to find the ad back two days later, placed in every category. We are spending a disproportionate amount of staff time dealing with this matter; it is no longer worth the cost of maintaining the service when other online services have been established to handle the specific need for online person-to-person sales."

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Special Event Station
Members of UKRA will activate the special event station GB5ST from April 31st for 3 days

Activity will be on all bands 160-10 meters and as well as 2 meters.

The group's challenge is to contact as many stations worldwide who have stubbed their toes in the last 5 years during their 3 day event. So if you have or know of someone who has stubbed their toe in the last 5 years call them. QSL via RSCB.

Does falling down and breaking one's shoulder and elbow in two
separate toe-stubbing incidents count?

If so, what frequencies can we find them on?

Amateur Radio Newsline" Report 1603 - May 2, 2008

The following is a closed circuit advisory and not necessarily for air.
With a report on Amateur Radio Newsline's finances, heres Andy Jarema, N6TCQ:

--

OK, you all know why I am here. Its spring and all the bills from last
winter have been mounting up. And, as usual, there is really not very much
left in the treasury to pay them. Eventually they have got to get paid or
these news reports will cease. That time is now.

So we ask that you take a few moments to send a donation to the Amateur
Radio Newsline support fund so that we can keep these newscasts coming your
way. Making a contribution is only a mouse click away if you have Pay Pal.
Just go to www.arnewsline.org and click on the button at the top of the
page marked "Make Donation." Or you can send in a donation to the Amateur
Radio Newsline Support Fund, Post Office Box 660937, Arcadia California,
91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio
Newsline will be eternally grateful and these newscasts will be here for you..

Once again thats the Amateur Radio Newsline Support Fund, Post Office Box
660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

For the Support Fund, Im Andy Jarema, N6TCQ.

--

That ends the closed circuit. Amateur Radio Newsline report number 1603
with a release date of Friday, May 2nd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Earthquakes swarm Nevada, an appeals court says
the ARRL is right and the FCC is wrong on BPL, the DARC returns to Dayton
and the results of Newsline's survey on the possible effect of high gas
prices on possible hamfest attendance. All this and more on Amateur Radio
Newsline" report number 1603 coming your way right now.

RESCUE RADIO: QUAKE STORM HITS THE RENO NEVADA AREA

The area in and around Reno, Nevada, was caught by surprise on Thursday,
April 24th. Thats when a magnitude 5 quake hit just before 4 p.m. Mountain
Daylight Time.

The U.S. Geological Survey reports that the quake was centered 4 miles west-northwest of Reno. It was followed by a swarm of aftershocks that have rattled nerves and put hams across the region on alert. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno with the latest:

--

My wife and I were awakened to the tune of "Shake, Rattle & Roll" as sung by Mother Nature here in Reno. The areas west side near Mogul has been shaking continually with a swarm of small temblors since February 28.

The US Geological survey reported the largest quake at 5.0 struck Friday night April 25 just before Midnight. As Section Emergency Coordinator, I went straight to the radio where we opened an informal net locally. Reports started coming in from all over the area, seems that we woke up almost every ham in town!

With varying intensity, Glenn Thomas, WB6W checked in having felt it as far south as Minden, south of Carson City.

Joe Wolf, WA6RKN, who lived less than 2 miles from the epicenter told us of just about everything on his bookshelves hitting the deck, had a nervous wife and 3 unhappy ferrets, but that his house was in tact!

Then on Monday, a magnitude 4.2 tremor shook the city, followed by numerous aftershocks. No injuries have been reported from the latest in this bizarre two-month swarm of earthquakes.

Scientists say this is unusual because the tremors seem to be getting stronger, instead of weaker. Meanwhile amateur radio ARES members stand ready should a major earthquake strike the area.

Washoe County Emergency Coordinator Bob Miller, WA6MTY told me:

--

Audio only - hear it in the mp3 version of this newscast at www.arnewsline.org

--

But it is good to note that we have a great team of well-trained amateurs on hand should the call come in to help.

In the Shakey-est Little City in the World, Reno Nevada, Im Don Carlson for the Amateur radio newsline.

--

The U.S. Geological Survey says that aftershocks could continue for some time. Hams involved in emergency communications in the vicinity of Reno say that they are prepared. Ironically, the Emcommwest ham radio emergency communications convention takes place at the Circus Circus Hotel in Reno May 2nd through the 4th. Needless to say the Reno quake storm will be a hot topic of discussion at this years event. (ARNewsline")

**

RESCUE RADIO: HAMS TO BE ON FCC EAS PANEL

A follow up to last weeks story on the upcoming E-A-S summit slated for Washington D.C. It now appears as if there will se several hams taking part, They include Panelists Mark Manuelian, KE1AR, of CBS radio, Clay Freinwald, K7CR, of Entercom; and Art Botterell, KD6O, who is the manager of the community warning system for Contra Costa County Sheriffs Office in California.

There will be two discussion groups. The first panel on that day will focus on the state of EAS, especially system breakdowns in the "daisy chain" as well as ways to improve testing protocols. Anther panel will focus on next-generation technologies and explore what policies and protocols should be implemented to ensure compatibility between implementation of the Common Alert Protocol and state government operations. Both discussions will focus on what states need to do to ensure that state, county and local emergency response systems are functional. (RW)

**

RADIO LAW: APPEALS COURT SIDES WITH ARRL IN BPL ISSUE

In case you have not yet heard the news, the US Court of Appeals for the District of Columbia Circuit has sided with the ARRL in its Petition for Review of the FCC's Orders adopting rules governing Broadband over Powerline or BPL systems. The Court agreed with the ARRL on two major points and remanded the rules to the Commission.

Writing for the three-member panel were Circuit Judges Rogers, Tatel and Kavanaugh, Judge Rogers summarized their position by saying that the Commission failed to satisfy the notice and comment requirements of the Administrative Procedure Act by redacting studies on which it relied in promulgating the rule. Also that it failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions. The term redacting means to edit or make changes to.

The Court was not persuaded by the ARRL's arguments on two other points, on which it found that the Commission had acted within its discretion. But the two key points on which the League has won force the FCC to either look again at their rules for the implementation of Access B-P-L or take this court decision into appeal. (ARRL)

**

RADIO LAW: FCC TO PRE ANNOUNCE MEETING VOTE AGENDA

The FCC will begin posting topics to be voted on at its monthly open meeting three weeks in advance. The Communications Act mandates that the commission meet at least monthly. Up until now, the agency has been issuing a notice of its agenda one week before a monthly meeting. The FCC said it would still issue that notice and now also list items slated for a vote on its Web site.

Some commissioners and industry observers had complained of a murky voting process, and a congressional committee has begun a review of the FCCs

processes. According to Chairman Kevin Martin, the idea is to make the agencys processes more visible. (RW)

**

RADIO LAW: FCC SAYS NO TO COMMERCIAL HAM FREQ USE REQUEST

The FCC has told Utah-based Miller Motorsports Park that it cannot use frequencies in the 70 centimeter ham band for business purposes. Miller had requested the use of frequencies in the 448 MHz ham band at 4 watts output. This, for use by 100 mobile for a race event scheduled for May 26th to June 1st.

The application by Miller said that the radios would be used for security, medical and maintenance for the entire event. It claimed that this communications network was vital to the life and safety of the spectators and drivers of this race. It even went so far as to imply that the National Telecommunications and Information Agency had approved the use of thesew 448 MHz channels.

But on Thursday, April 24, ARRL General Counsel Chris Imlay, W3KD, filed an Informal Objection with the FCC regarding a pending application. One day after filing the objection, the FCC agreed with the ARRL, saying that due to the possibility of interference to Amateur operators and also the race teams utilizing the proposed frequencies, it felt that it was not in the public interest to grant the Miller Motorsports Park's request. The FCC also advised Miller Motorsports that if it wished to pursue other frequencies, that it should coordinate with the National Telecommunications and Information Administration and the American Radio Relay League. (QRZ.com, ARRL, others)

WITH NEWSLINE: PLEASE RE-FILE YOUR 2008 YHOTY NOMINATION

Attention anyone who may have filed a nomination for a youngster for this years Young Ham of the Year Award. If you used the on-line form we did not get it. Nor do we yet know the reason why although we are pretty sure that its software related. Bill Pasternak, WA6ITF, tells us what went wrong and how you can get around the problem:

--

When the new www.yhoty.org website came on line late last year the software to deliver completed forms to us was working fine. In February we opened

the nominations for the 2008 award but none came in. Thats not unusual since many folks wait until the last minute to file. Kind of like April 15th when taxes are due.

In fact it was on or at least near April 15th that we began receiving thank-you notes for nominations that should have gone to the sender. Instead they were being e-mailed to the Newsline office but the nominating forms were simply disappearing into cyberspace.

We notified the webmaster of yhoty.org -- Kevin Boudreaux , N5XMH -- and he's working to try to rectify it. In the meantime he suggests that anyone who filed a nomination in past weeks do so again, but not using the on-line form which likely will be off-line by the time you hear this report.

Instead, download and print out the paper form, fill it out and send it to us at the address on the bottom of the page. Or, if you have a scanner, convert it to a file and e-mail it to us at newsline at ix dot netcom dot com.

We apologize for any inconvenience this may cause but we want to be certain that every youngster nominated gets his or her application seen by the judging committee.

So once again. Do not use the on-line nominating form. Download and print out the paper form at www.yhoty.org, fill it out and send it to us at the address on the bottom of the page. Or, convert it to a file and e-mail it to us at newsline at ix dot netcom dot com.

And, as we said earlier -- to those who have already filed using the on-line form, please re-file your nomination again -- on paper or by e-mail. Your original filing was lost in cyberspace by the software glitch and was never received.

For the Amateur Radio Newsline, I'm Bill Paternak, WA6ITF, in Los Angeles.

--

As is always the case, this years nominating period for the Newsline Young Ham of the Year Award ends at midnight Eastern time on May 30 with this years winner to be announced by late June or early July. (ARNewsline")

**

ENFORCEMENT: ANTIQUE RADIO COLLECTOR RECONSIDERATION PETITION DENIED

The FCC has issued a Memorandum Opinion and Order denying a Petition for Reconsideration1 filed by Richard Mann doing business as The Antique Radio Collector. This, seeking reconsideration of a $7000 Forfeiture Order issued by the Spectrum Enforcement Division of the Enforcement Bureau on November 27, 2007.

In its Notice of Apparent Liability the FCC had claimed that the Antique Radio Collector had violated the FCC's rules regarding the marketing of uncertified A-M radio transmitters as far back as 2006. Specifically the S S TRAN model AMT3000.

As previously reported, in its response the Antique Radio Collector claimed that these were really not fully assembled but rather kits that he had put together by Mann at his residence. As such it was not aware of the need for a Commission issued certification authorizing a fully assembled AMT3000 AM transmitter.

But in deny the appeal the FCC says that even transmitters built from kits must be certified before being sold commercially. It says that as a result of its reconsideration of the facts that it finds that neither cancellation nor reduction of the forfeiture is warranted and that the $7000 Forfeiture Order should be affirmed.

The Antique Radio Collector was given the customary 30 days from the April 28th date of issuance of the order to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: FCC FINES BROADCASTER FOR FAILURE TO REDUCE POWER AT DUSK

A licensed broadcaster from Meridian, Mississippi, has been fined $1500. Frank Rackley, Jr. the licensee of Station WNBN-AM was handed the forfeiture for operation of the station from an unauthorized location and operation at a power level in excess of that authorized by the license.

WNBN-AMs station authorization requires it to reduce power from 2.5kW to 330 watts at local sunset time. During the month of January, the local sunset time was 5:15 p.m.. Andon January 14th, an agent from the New Orleans Office monitored station WNBN-AMs signal from 4:45 until 6:00 p.m. and did not observe any change in transmitter power. A few days later, on January 16th agents determined the station was broadcasting from coordinates other than which the station had registered with the FCC.

On February 22nd the New Orleans FCC Office issued a Notice of Apparent Liability for Forfeiture to Frank Rackley Jr.in the amount of $8,000. Rackley submitted a response to the NAL requesting a reduction of the proposed forfeiture. As a result of its review the FCC concluded that a reduction of the proposed forfeiture to $1,500 is warranted, based on demonstrated inability to pay.

Rackley and WNBN A.M. were given the usual 30 daysfrom the April 24th release of the Report amd Order to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: HAM SENTENCED TO 23 MONTHS ON CHILD PORNOGRAPHY POSSESSION CHARGE

A ham has been sentenced to prison time on federal child pornography charges. Sentencing of Kevin Alfred Strom, WB4AIO, took place on Monday, April 21st in Charlottesville Virginia's U.S. District Court. According to the WVIR Television news website, Strom earlier plead guilty to possessing child pornography on his computer.

The judge hearing the case sentenced Strom to 23 months in prison less credit for time already served plus 15 years supervised probation. The WVIR report indicates Strom could be out of prison by years end.

ON THE WEB: THE SOUNDS OF VLF

The sounds of Very Low Frequency radio can now be heard live on the web. This with word that a collection of live natural radio streams of the VLF band from around the world is available at several websites. Here's a few seconds from a web based receiver in Sheffield in the U-K:

--

Actual web audio

--

The entire list of Very Low Frequency web accessible receivers is far to long to include here. You will find more in this weeks printed Amateur Radio Newsline report. (Via e-mail)

HAM RADIO ON THE WEB: WWW.NH7C.COM OFFERING FREE HAM CLASSIFIEDS

Two weeks ago the ARRL announced that it was dropping its ham radio classified ads from its website. Now, cones the Amateur Radio Social Network that says it welcomes those wanting to post such ads on its NH7C.com cyberspace home.

The Amateur Radio Social Network says that it created NH7C.com with the user in mind and sports many of the latest features available. The latest addition is classified ads that are free as is membership in the group itself

But NH7C.com is not the only site looking for your classified ads. Another is hamads.com also known as www dot qth dot com . That site has been offering free ham radio related classified ads for several years. (KC5FM)

HAM BUSINESS: N5WEB BUYS FORCE 12 ANTENNAS

Mark Hooper, N5WEB is the new owner of Force 12, Inc. antennas and towers. He will be manufacturing the product line in Bridgeport, Texas which is located near the Dallas Fort Worth area.

Introducing himself on the Force 12 website, Hooper says that he built his first radio from a schematic at the age of 10. He received his Novice license and built is own transmitter at the age of 15. Hooper ays that it

was these interests that ultimately led him to a career in electronics as an engineer, much of it supporting manufacturing operations for both large and small companies.

Hooper says that he is looking forward to using his expertise and 20 plus years experience in manufacturing to build the best antenna products on the market. He says that he and his staff look forward to hearing from you. That it is their goal to provide excellent customer service and support for your antenna needs in the coming years.

Hooper says to call or e mail and let us know how we can best be of service. Contact information is on the Force 12 website at /www.force12inc.com (Force 12 Release)

THE SOCIAL SCENE: DARC RETURNING TO DAYTON

After several years of absence the Germany's national ham radio society, the Deutscher Amateur Radio Club will again be at the Dayton Hamvention.

Better known world-wide simply as the DARC, the Deutscher Amateur Radio Club will be represented at Hamvention by Joerg Jaehrig, DJ3HW, who is its IARU Liaison Officer. Also on hand to answer questions regarding ham radio in Germany will be Dennis Haertig, DL7RBI, who is the D-A-R-C Secretary of International Affairs. The two will be bringing with them a 15 minute video presentation titled "60 years of WAE Award" that will be presented in the ARRL sponsored movie room.

Information on the participation in Hamvention by the Deutscher Amateur Radio Club in German can be found on-line at www.darc.de. More on what's planned for this years Dayton gathering is on line at the Hamvention website. Its in cyberspace at www.hamvention.org

(DARC)

NEWSLINE SURVEY RESULTS: GAS PRICES VS. POSSIBLE HAMFEST ATTENDENCE

As the spring and summer ham radio convention season approaches, we have the results of our month-long on-line survey that asks how high the price of a gallon of gas has to go before you decide not to go. And there were some surprises.

We structured the response table starting at $3.75 a gallon which was just below the maximum cost anywhere when the survey began and increased it in 25 cent increments all the way up to $5 a gallon. The latter being a figure nobody thought possible a month ago, but one now being bandied about by some involved in petroleum futures.

That aside, what dd our listeners say? A clear majority, some 42 percent put their limit at the $3.75 a gallon point. But a surprising 23.6 percent said that they would be willing to spring for $5 a gallon to spend hamfest time with their buddies and friends. 18 percent said that $4 a gallon was all that they were willing to spend while the rest was spread out from $3.35 to $3.75.

So how will these numbers translate into actual hamfest attendance? Well only the next two to three months of watching the gate numbers will tell for sure. But Emcommwest in Reno this weekend and the upcoming Dayton Hamvention in Ohio on May 16, 17, and 18 should both be good indicators of how much of an impact high fuel prices are having on your personal ham radio convention presence this year. D-STAR CORNER: SAN DIEGOI D-STAR NET RECORDING NOW AVAILABLE

The audio recording of the D-Star San Diego Group Tuesday Night Tech Net is back. The D-Star San Diego Tuesday Night Tech Net allows D-Star owners and operators a roundtable forum at which to exchange ideas and information regarding the D-Star mode of operation. With the rapid advancement and all the changes taking place in the D-Star realm, this net proves to be quite informative and enjoyable for all who participate. If you are interested in hearing the recording, visit

WORLDBEAT - JAPAN: HAMS GET EXPANDED 80 METER PRIVELEGES

Some good news for hams in Japan. As of Monday April 28th, Radio Amateurs in that nation have been given access to additional frequencies in the 80 meter band oa a co-primary shared basis. As a result of this action, Japanese amateurs are now allowed to operate 3599 to 3612 kHz, 3 680 to 3687 kHz, 3702 to 3716 kHz, 3745 to 3747 kHz and 3754 to 3770 kHz. This is in addition to all subbands that they were previously allowed to use. Japan's Ministry of Internal Affairs and Communications made a public announcement that the domestic Table of Frequency Allocations and the Japanese Amateur Bandplan had been amended to reflect this change. (Southgate)

WORLDBEAT - BRUNEI: ON THE AIR ONCE AGAIN

The Brunei Darussalam Amateur Radio Association has announced that it will be back on air. At a recent press conference held at R-A-C Technologies the groups president announced that the association, which has been inactive for six years, will be holding its reactivation ceremony on Sunday, May 4th at the h National Stadium. Amateur Radio in Brunei really got started in the late 1970's by a number of local hams who formed the Askar Muda radio club. In 1999, the 27th SEANET Convention was successfully held in Brunei. (Borneo Bulletin On-Line)

**

ON THE AIR: MUSEUM SHIPS WEEKEND

On the air, the 2008 Museum Ships Event will be sponsored by The Battleship New Jersey Amateur Radio Station will take place during the period of on June 7th from 0001 to 2359z on June 8th. Ships wishing to participate should send a note to museum@nj2bb.org with the name of ship, callsign, location, QSL information and contact information for person responsible. During this event there is participation of naval ships, lightships, steamships, research vessels and merchant ships. A list of participating ships is available at www.nj2bb.org (Press release)

DX

In D-X. listen out for Croatian special event station 9A08P which will be active through December 31st. This operation is to celebrate the City of Djurdjevac using all bands and modes. A special QSL card will be issued with the complete story on it. All QSO's will be confirmed automatically via the bureau.

And OZ1TL, is expected to be active from Bhutan as A52TL during his stay to attend some of the inauguration ceremonies of the nations new king. Activity will be mainly on CW on most bands including 160, 80 and 40 meters. QSL via his home callsign.

Lastly, for those of you who operate 50 MHz and above, word that HB9HLM, will be active as CN2DX from grid IM63BM in Monaco between July 26th and August 8th. He will have 100 watts on 6 meters and 500 watts on 2. A pair of 7 elements yagi's will be the 2 meter antenna, QSL via EA7FTR.

(Above from various DX news sources)

THAT FINAL ITEM: AN SDR RECEIVER ON THE WWW

And finally this week, a kind of rhetorical question. What does a web based software defined radio sound like and what will it do? Well here's part of the answer. Take a listen:

--

Actual web audio

--

Thats audio from the latest web-based software defined or S-D-R radio located at the University of Twente's amateur radio club in the Netherlands. The system allows visitors to tune over parts of either the 40 or 80 meter bands. When we tuned in 80 was dead but there was activity on 40:

--

Actual web audio

--

What makes this system different from other web-based receivers is, that thanks to the use of Software-Defined Radio technology, this receiver can be tuned simultaneously by multiple users. And when tuning around a band, you can either enter a frequency directly, or click-drag on the frequency scale. Bandwidth can also be controlled, either by the button options, or by click-dragging on the passband edges of the frequency scale. Listen again:

--

Actual web audio

--

The web page also features a log book, a list of connected users and a chat facility. Additional bands are planned for the future. Its all available to experiment with on line at http://websdr.ewi.utwente.nl:8901/

(Southgate)

==> FCC DENIES UTAH MOTORSPORT PARK USE OF AMATEUR RADIO FREQUENCIES

On Thursday, April 24, ARRL General Counsel Chris Imlay, W3KD, filed an
Informal Objection with the FCC regarding a pending application for a
Special Temporary Authority (STA) filed by Miller Motorsports Park in
Tooele, Utah. One day after filing the Objection, the FCC agreed with
the ARRL, saying, "Due to the possibility of interference to Amateur
operators and also the race teams utilizing the proposed frequencies, we
feel that it is not in the public interest to grant [Miller Motorsports
Park's] request."
```

The FCC also advised Miller Motorsports that if they "wish[ed] to pursue other frequencies, [they] should coordinate with the ARRL and National Telecommunications and Information Administration (NTIA)."

Miller Motorsports requested the use of frequencies 448.525, 448.650, 448.060, 448.290 and 448.610 MHz at 4 W ERP. They proposed to use 100 mobile units on each of these and other channels at or above 450 MHz for a race event scheduled May 26-June 1, 2008. The application filed by Miller Motorsports stated that the radios would be used for "security, medical and maintenance for the entire event" and that communications service is "vital to the life and safety of the spectators and drivers of this race event." Miller Motorsports also implied that the NTIA had approved the use of the 448 MHz channels.

The League's Informal Objection pointed out that "Amateur Radio Service licensees make extremely heavy use of the band 420-450 MHz, and especially the segment 440-450 MHz for FM voice repeaters. There are repeater stations in Salt Lake City, of which Tooele is a close-in suburb, using frequencies throughout the 448 MHz range for outputs, including 448.525, 448.625, 448.050 and 448.075 MHz. In addition, there are repeater outputs in other areas of the greater Salt Lake City area which are in regular operation at all times of the day or night, and radio amateurs using mobile stations would be predictably interfered with by operation as proposed in the STA."

The Objection also stated that there was the possibility that some of the spectators at Miller Motorsports Park, or otherwise in the area, might be Amateur Radio operators who might be operating using their portable transceivers "on the precise channels sought by the STA."

The ARRL called the Miller Motorsports Park choice of channels "completely inappropriate. The radio amateurs who are licensed to use these frequencies are under no obligation to either tolerate interference or to cease their own operation, regardless of the interference that might be suffered at any time" by Miller Motorsports.

While the FCC has issued STAs on the amateur allocations from time to time, the ARRL wrote, "many, perhaps a majority, are of no concern to the ARRL due to the choice of frequency band, duty cycle or power level proposed," what Miller Motorsports is requesting is "a completely incompatible and inappropriate use of Amateur Radio allocations." Citing "harmful interference to and from the Amateur Radio Service on channels in the 448 MHz band," the ARRL requested that the FCC deny Miller Motorsports' STA application.

==> NEWSPAPER REPORTS "BPL PLAN IS DEAD IN DALLAS"

The Dallas Morning News has reported that "an ambitious plan for using power lines to deliver fast Internet service to 2 million Dallas-area homes collapsed Thursday." Current Group, LLC has announced plans to sell its Dallas BPL network to Oncor, a regulated electric distribution and transmission business, for $90 million. Oncor reportedly has no plans to offer Internet service but will use the network to detect

distribution network issues
<http://www.dallasnews.com/sharedcontent/dws/bus/stories/DN-current_02bus.ART.State.Edition1.460d413.html>. While Current originally touted the network as a way to offer Internet service to consumers and had entered into a marketing arrangement with DirecTV, the Houston Chronicle quotes Oncor spokesman Chris Schein as confirming that Oncor will use the network only for monitoring the power grid: "Our business is delivering electricity, not being an Internet provider or a television provider." <http://www.chron.com/disp/story.mpl/ap/business/5747397.html>

ARRL Chief Executive Officer David Sumner, K1ZZ, observed that "This announcement underscores yet again that the Bush Administration made a fundamental error in judgment when it erroneously identified BPL as a potential 'third wire' delivering broadband to consumers. As the Court of Appeals for the DC Circuit determined last week <http://www.arrl.org/news/stories/2008/04/25/10064/?nc=1>, the FCC then compounded the error by 'cherry-picking' from its staff studies and ignoring other studies that proved the FCC was underestimating the interference potential of BPL systems. One can only hope that this latest marketplace failure of BPL will send a clear message that the answer to expanding consumer broadband access lies with other, more promising technologies that do not have such a potential to pollute the radio spectrum."

ARRL Laboratory Manager Ed Hare, W1RFI, was quick to point out that BPL was not going away in Dallas. According to Oncor Vice President Jim Greer, Oncor will use the BPL network to spot grid problems to detect large power outages before they affect customers. Oncor will not offer Internet service through the system as Current had originally planned when they built it.

The ARRL has no issues with BPL as long as it does not cause harmful interference to the amateur bands. Current's Dallas system is a good example of that, Hare said, as it is "notched" so as not to interfere with the Amateur Radio Service: "The Current system in Dallas is probably not causing interference to ham radio. Their equipment doesn't use the ham bands. It is also quiet except when in use. For meter reading and other utility applications, nearby modems may make the occasional short burst of noise, but not the cacophony of sound we hear with some other systems. You would probably be able to tell that BPL is there if you tune outside the ham bands. From an EMC perspective, what is needed now to complete this progress are regulations and standards that match BPL's most successful models."

DirecTV customers who get Internet service through Current's network will probably lose service when the deal goes through. "Oncor is not in the telecommunications business, and it has no plans to get into the telecommunications business," said Schein.

Dallas and Houston are the only metropolitan areas in Texas with BPL. In the past, the City of Austin looked at incorporating a BPL system in their community, but decided not to do so. In a report

<http://p1k.arrl.org/~ehare/bpl/COAAE_BPL_Final_Report.pdf> on how the BPL trial it undertook worked for them, the City of Austin summarized its reasons for that decision.

==> EIGHT TORNADOES RAVAGE EASTERN VIRGINIA

When tornadoes swept across the state of Virginia on Monday, April 28, local Amateur Radio operators responded to the call for assistance. According to Ken Murphy, KI4GEM, Assistant Emergency Coordinator for Portsmouth, an EF3 tornado touched down in Suffolk, Virginia around 4 PM local time, plowing its way east into Norfolk, damaging scores of homes, stores and cars and downing dozens of trees and power lines; Suffolk is about 20 miles from Norfolk, Virginia. Soon after the tornadoes touched down, Virginia Governor Timothy M. Kaine declared a State of Emergency and directed state agencies to take all necessary actions to aid in the response to widespread damage from the severe weather. About 140 homes were destroyed, damaged or deemed uninhabitable.

The National Weather Service (NWS) confirmed eight tornadoes in Virginia: City of Suffolk (strong EF3), City of Colonial Heights (EF1), Brunswick County (EF1), Gloucester County (EF0), Mathews County (EF0), Halifax County (EF1), Surry County (EF1) and Isle of Wight County (EF1).

"The tornado produced severe damage to many structures, downed large trees, and destroyed power lines. Approximately 200 injuries were reported and several homes and businesses were destroyed. There were no fatalities," Murphy said. Upon spotting the tornado, Murphy placed a call on the Portsmouth repeater, asking for someone to notify the National Weather Service and the local EMS. A SKYWARN net was activated on another repeater; Portsmouth Emergency Coordinator Dave Livingston, K5SFM, and Bill Farmer, KI4GWC, served as Net control.

"This was an unusual activation in that an ARES AEC from one locality -- Portsmouth -- would not normally be on the scene of a tornado touching down in another locality -- Suffolk," said ARRL Virginia Section Manager Carl Clements, W4CAC. "Murphy requested that NWS be notified of the tornado and that the fire department and emergency teams be notified so they could respond. The Deputy Fire Chief of the Driver Volunteer Fire Department (who was the on-scene commander at the time) was concerned about the number of onlookers entering the disaster area. There were many power lines down and trees in the roadway and on buildings, as well as damaged natural gas mains. Some buildings were gone leaving a massive debris field."

The Driver VFD Chief requested that ARES activate in order to assist the local teams; 10 members of the Portsmouth ARES group responded. "The Chief had Murphy assign hams to the roadblocks at the major intersections to assist the police on the scene with traffic and crowd control. We also kept the Chief informed of the locations of other reported funnel clouds. At one point, the Fire Chief on the scene was advised that one of the team members was tracking the rapidly moving weather still in the area with the help of APRS," Clements said.

A spokesperson for the City of Suffolk said the area around Sentara Obici Hospital in Driver (a community within Suffolk) was hardest hit. The hospital was damaged but still able to treat patients. A spokesperson for the hospital said about 60 injured people were being treated there, and he expected most to be released. "We have lots of cuts and bruises and arm and leg injuries," he said.

Clements said that no further assistance from ARES has been requested. "All local police, fire, and EMS communications are intact and functioning. As in any disaster, the Emergency Management Officials are asking that unless you have a specific assignment from an on-scene agency (Red Cross, Salvation Army, official search and rescue teams and the like), please do not just show up at the stricken areas to offer assistance."

==> SPRING 2008 W1AW FREQUENCY MEASURING TEST SCHEDULED THIS MONTH

Capitalizing on the popular and effective automated online results reporting system developed by Bruce Horn, WA7BNM, for the Frequency Measuring Test (FMT) <http://www.arrl.org/w1aw/fmt/> in November 2007, W1AW will conduct a spring FMT. This FMT will begin on Wednesday, May 21 at 9:45 PM (EDT) (that's the same as 0145 UTC on May 22), replacing W1AW's normally scheduled phone bulletin. W1AW Station Manager Joe Carcia, NJ1Q, recommends that those planning to participate should listen to W1AW's transmissions prior to the event to determine which band -- or bands -- will be best for measurement purposes.

In this edition of the FMT, listeners will be asked to measure the frequency of an audio tone, given an exact frequency for the carrier signal. The tone will be between 1000-2500 Hz. The carrier frequencies will be 3990 kHz (LSB), 7290 kHz (LSB), 14290 kHz (USB) and 18160 kHz (USB).

Measuring audio frequencies of a modulated signal is a useful skill for those interested in digital modes. Proper tuning of these signals is important to obtain the highest quality performance. For non-digital users, it is also important to understand the relationship between the frequencies of the modulated signal's sidebands and its carrier. The techniques for measuring a modulating tone are described in the November 2004 QST in an article <http://www.arrl.org/w1aw/fmt/2004/04fmtsilver.pdf> on the Frequency Measuring Test by H. Ward Silver, N0AX. The FMT Web page <http://www.arrl.org/w1aw/fmt/> also has several interesting articles about measuring on-the-air signal frequencies.

The FMT will start with a general QST call from W1AW at exactly 0145 UTC, transmitted simultaneously on the frequencies listed above. The test will consist of three 60-second key down transmissions for each band, followed by a station identification. The test will last for approximately 15 minutes and will end with station identification. W1AW will identify before, during and after the transmissions. There are no plans at this time for a West Coast station.

As in the November 2007 FMT, your report should be submitted via the FMT Report form on the W1AW FMT Web site <http://www.arrl.org/w1aw/fmt/>. Along with your call sign and e-mail address, enter your most accurate measurement on each band. There will be a window to list your equipment, describe the method you used to make the measurements and enter any Soapbox comments. Participants have 14 days to input their data. Participants may input their data more than once, although the final entry will be the one used for the results. W1AW will post the transmitted frequencies on the FMT Web site following the test. This will allow participants to quickly determine the accuracy of their equipment and methods. A complete package of results will be available via the FMT Web site after the 14-day reporting period is concluded. The results from the November 2007 FMT are available on the 2007 FMT Results Web site <http://www.b4h.net/fmt/fmtresults.php>.

==> ARRL CARD CHECKING AT DAYTON HAMVENTION

DXCC staff and volunteers will be checking cards at the 2008 Dayton Hamvention during all hours of operation on Friday, Saturday and Sunday. The Dayton Hamvention is May 16-18 at the Hara Arena in Dayton, Ohio. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers will be checking cards for the following ARRL awards: DXCC, Worked All States (WAS), VHF/UHF Century Club (VUCC) and Worked All Continents (WAC). In order to help applicants and the card checkers through the process to avoid delays and allow the checkers to serve everyone, Moore offers the following tips:

Preparation
* There is a 120 card limit per applicant.
* Make sure that cards are in proper order -- band first, then mode. Applicants should place cards with multiple QSOs at the end.
* The order on the record sheet must match the order of the cards. The latest forms are on the DXCC Web site <http://www.arrl.org/awards/dxcc/>.
* Have all paperwork completed before coming to the table, and make sure everything is legible.
* List only those QSOs for which you want credit.
* Applicants planning to do a hybrid application (paper application with Logbook of The World) should do the LoTW portion just prior to leaving for Dayton.

Upon Arrival
* Take a number.
* Stay in line.
* Notify the card checker of anything important before they start checking cards. The card checker, upon finishing checking the cards, will review any problem(s) with the applicant.
* Stay with the card checker until completion.
* Vendors may drop off their application to a checker and return later for pickup.

Upon Completion
* The card checker will return your cards to you; DXCC staff will not keep any cards.
* The card checker will advise applicants of the final fees upon completion of the application.
* Payment is due upon completion of your application. Applicants may pay for their award in the following ways: Credit Card or Cash (US or Euro only), Check (from USA bank only), Money Order (US or International). DXCC will not bill applicants.
* For the latest fee information, please see DXCC Rule 15 <http://www.arrl.org/awards/dxcc/rules.html>.

Moore advises that, if possible, applicants should bring a copy of their last credit slip. "Remember," Moore said, "if you are doing a hybrid application -- LoTW plus cards -- be sure you do the LoTW element prior to leaving for Hamvention."

If you have questions concerning the DXCC program, please contact DXCC desk via e-mail <dxcc@arrl.org>.

==> TEN NEW SATELLITES IN ORBIT

Ten satellites reached orbit April 28 aboard an Indian PSLV-C9 rocket launched from the Satish Dhawan Space Center. The primary payloads were India's CARTOSAT-2A and IMS-1 satellites. In addition to the NLS-5 and RUBIN-8 satellites, the rocket carried six CubeSat <http://www.cubesat.org/> research satellites, all of which communicate using Amateur Radio frequencies. All spacecraft deployed normally and appear to be functional at this time.

The SEEDS satellite was designed and built by students at Japan's Nihon University. When fully operational, SEEDS will download telemetry in Morse code and 1200-baud FM AFSK packet radio at 437.485 MHz. The satellite also has Slow-Scan TV (SSTV) capability. Several stations have reported receiving SEEDS CW telemetry and the team would appreciate receiving more reports from amateurs at their ground station Web page <http://sat.aero.cst.nihon-u.ac.jp/gs/english/cardform_e.html>.

AAUSAT-II <http://aausatii.space.aau.dk/eng/> is the creation of a student team at Aalborg University in Denmark. It will downlink scientific telemetry at 437.425 MHz using 1200 or 9600-baud packet.

Can-X2 <http://www.utias-sfl.net/nanosatellites/CanX2/> is a product of students at the University of Toronto Institute for Aerospace Studies, Space Flight Laboratory (UTIAS/SFL). Can-X2 will downlink telemetry at 437.478 MHz using 4 kbps GFSK, but the downlink will be active only when the satellite is within range of the Toronto ground station.

Compass-One <http://www.cubesat.de/> was designed and built by students at Aachen University of Applied Sciences in Germany. The satellite features a Morse code telemetry beacon at 437.275 MHz. Compass-1 will also provide a packet radio data downlink, which will include image data, at 437.405 MHz.

Cute 1.7 + APDII <http://lss.mes.titech.ac.jp/ssp/cute1.7/index_e.html> is a satellite created by students at the Tokyo Institute of Technology. This satellite will not only provide telemetry, it will also offer a 9600-baud packet store-and-forward message relay with an uplink at 1267.6 MHz and a downlink at 437.475 MHz.

Delfi-C3 <http://www.delfic3.nl/> was designed and built by students at Delft University of Technology in the Netherlands. It includes an SSB/CW linear transponder. The satellite will be in telemetry-only mode for the first three months of the mission, after which it will be switched to transponder mode. Delfi-C3 downlinks 1200-baud packet telemetry at 145.870 MHz. The linear transponder, when activated, will have an uplink passband from 435.530 to 435.570 MHz and a corresponding downlink passband from 145.880 to 145.920 MHz.

==>SOLAR UPDATE

Tad "To dazzle when the Sun is down, and rob the world of rest" Cook, K7RA, this week reports: For several weeks we expected today, May 2, to have active geomagnetic conditions. For instance, if you look at a forecast from April 23, it shows an expected planetary A index for May 1-3 of 10, 20 and 15. The next day, April 24, this changed to 8, 20 and 15, and on April 25 it was 10, 15 and 15. For May 1, we see the actual planetary A index for that day was 9, and for the following two days, the predicted values are 10 and 12, which are much more moderate. So obviously as we moved closer to this date, the return of a solar wind stream seemed less likely, although earlier today the planetary K index rose as high as 4, indicating unsettled to active geomagnetic conditions. Sunspot numbers for April 24-30 were 11, 0, 0, 0, 0, 0 and 0 with a mean of 1.6. The 10.7 cm flux was 70.4, 69.8, 69, 68.1, 68.5, 68.6 and 67 with a mean of 68.8. Estimated planetary A indices were 18, 8, 10, 10, 11, 8 and 9 with a mean of 10.6. Estimated mid-latitude A indices were 13, 7, 5, 7, 9, 4 and 4, with a mean of 7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is on May 2. On May 3-4, be on the lookout for the MARAC SSB QSO Party, the MARAC CW QSO Party, the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the 7th Call Area QSO Party, the Portuguese Navy Day Contest, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party. The RSGB 80 Meter Club Championship (SSB) is May 5. Next weekend, the NCCC Sprint Ladder is May 9 and the Nevada Mustang Roundup is May 9-10. The VK/Trans-Tasman 80 Meter Contest (Phone) and the FISTS Spring Sprint are both on May 10. Be sure to check out the SBMS 2 GHz and Up WW Club Contest, the EUCW

Fraternizing CW QSO Party, the CQ-M International DX Contest, the VOLTA WW RTTY Contest and the 50 MHz Spring Sprint on May 10-11. The SKCC Weekend Sprintathon is on May 11 and the RSGB 80 Meter Club Championship (Data) is on May 14. All dates listed are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Japanese Amateurs Receive More Privileges on 75/80 Meters: Japan's Ministry of Internal Affairs and Communications (MIC) announced that Japan's Table of Frequency Allocations and the Japanese Amateur Bandplan <http://www.jarl.or.jp/English/6_Band_Plan/JAbandplan.pdf> have been amended, giving amateurs in that country more privileges on certain frequency blocks in the 75/80 meter band. Japanese amateurs are now allowed to operate the following additional frequencies on the 75/80 meters: 3.599-3.612 MHz, 3.680 to 3.687 MHz, 3.702-3.716 MHz, 3.745-3.747 MHz and 3.754-3.770 MHz. As of April 28, 2008, Japanese amateurs will have privileges on the following frequencies in the 75/80 meter band: 3.500-3.520 MHz (CW only), 3.520-3.525 MHz (Digital Mode and CW), 3.525-3.575 MHz (CW and Phone), 3.599-3.612 MHz (CW and Phone), 3.680-3.687 MHz (CW and Phone), 3.702-3.716 MHz (CW and Phone), 3.745-3.770 MHz (CW and Phone) and 3.791-3.805 MHz (CW and Phone). "This makes it a bit easier for US amateurs to make contacts with Japanese amateurs, especially in contests, since Japan does not have phone privileges on the 160 meter band," said ARRL Membership Services Manager Dave Patton, NN1N. "These new privileges will also make it easier for DXpeditions to work Japan." -- Information provided by JARL <http://www.jarl.or.jp/English/>

* VoIP Hurricane Net Looking to Recruit Net Control Operators: The VoIP Hurricane Net <http://www.voipwx.net/> is looking for Net Control Operators (NCOs) to assist with its weekly Hurricane Preparation Net and during Hurricane Net activations. The VoIP Hurricane Net, created in 2002, is a support net working with WX4NHC <http://www.fiu.edu/orgs/w4ehw/>, the Amateur Radio station at the National Hurricane Center (NHC). The VoIP Net Management team is looking for NCOs from any geographic area to maintain a net for as long as emergency communications are required before, during and shortly after hurricanes; this could be up to 24 hours a day and sometimes for several days. Net Control Operators from the Pacific, Asia, Australia/New Zealand and other international areas can play a critical role in assisting net operations during the overnight hours of a North American activation during their local daytime, providing North American NCOs rest during their normal overnight hours. Fluent Spanish speakers are also encouraged to apply to become NCOs in order to further support operations in South and Central America, Mexico and Puerto Rico. The VoIP Net Management team will be offering NCO training in the coming weeks. If you're interested in becoming an NCO, please contact Director of VoIP Hurricane Net Operations Rob Macedo, KD1CY <rmacedo@rcn.com>, or VoIP Hurricane Net Weekly and Activation Net Control Scheduler Jim Palmer, KB1KQW <kb1kqw@voipwx.net>. -- Information provided by VoIP Hurricane Net

* No ARRL Audio News on May 16: There will be no ARRL Audio News on Friday, May 16. The ARRL Letter will be released on that day. ARRL Audio News will return on Friday, May 23.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2006 and 2007 YA/LY1Y operations in Afghanistan have been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

402. Differences..!

Newsgroup: rec.radio.amateur.moderated
Date: 2008-05-03 11:57:45 UTC
From: Ivor Jones <ivor@thisaddressis.invalid>
Message-ID: <682uuaF2psiitU1@mid.individual.net>
Source record: 2973

Just perusing the ARRL letter on rec.radio.info and the lead story was very interesting. It's about the ARRL objecting to the use of some 70cm frequencies for a commercial event.

This paragraph in particular caught my eye:

>"The ARRL called the Miller Motorsports Park choice of
>channels 'completely inappropriate. The radio amateurs who
>are licensed to use these frequencies are under no obligation
>to either tolerate interference or to cease their own operation,
>regardless of the interference that might be suffered at any
>time' by Miller Motorsports."

Just goes to show how things are different in the US to here in the UK. Over here we are only secondary users of the 70cm band (the primary user of just about everything above 2m is the Ministry of Defence) and so we have to put up with anything and everything, including car alarm keyfobs on 433.92 MHz as an example. We also only get 430-440 MHz rather than your 420-450.

Even in the 2m band (144-146 not 144-148 MHz..!), of which we are primary users,we cannot claim protection from interference.

Ah well..!

73 Ivor G6URP

If I recall properly we're secondary to the military in
that band as well. Indeed, 70cm repeater operators are learning that the
hard way... as many repeaters are having to reduce power or even go QRT
at the request of our military, to protect a radar system.

But the motorsports folks have no regular authority in that band at all.

I'm not sure I understand why they thought they needed amateur spectrum
for that project.

The Pave/Paws system that is pushing some repeaters off 70cm predates the complaints by several decades, and I take the military's new attitude to be another nail in the coffin of ham radio's former "favorite son" status at the Pentagon.

It used to be that we hams were a corps of operators who could be pressed into service quickly during a war or other crisis. Now, with Morse as deeply buried as its creators and military electronics too secret to be entrusted to soldiers and sailors who haven't been vetted for security clearances, we're yesterday's news in the E ring.

We'll have to find another reason to justify the allocations we enjoy. It's going to be hard work, and not nearly as easy as learning Morse (not that that would help now). We're going to have to get better - in fact, much better - at public relations: the Red Cross and other disaster relief agencies have known the importance of image all along, but now hams have got to get in the game and advertise ourselves as an anlternative to traditional communications during hurricanes, floods, earthquakes, etc.

Of course we've had this debate before. Older hams such as I feel that we followed the program and did what was expected of us, and now I resend being pushed aside in favor of a Federal Emergency Management Agency which is, to my jaundiced eye, proficient only at promising what others will have to deliver and claiming credit for what others have done. It's a cold, cruel world, and we must get better at telling the public and the their elected officials how much we do.

Bill

Anyone with some level of technical knowledge might wonder why a
billion dollar (boondoggle) "radar system" can't discriminate between
a fixed, known "target" (like a repeater)and one that is moving, comes
from over the horizon which might be something nasty?

Sounds like some real shoddy engineering took place at taxpayer
expense. I can think of 3 or 4 ways to remove false targets w/o
loosing any system level accuracy or sensitivity. In fact, didn't
they perfect that during the cold war?

Gee... Thinking about it some. All Abdulah (or Ivan or whoever)
needs to do is buy a 440 rig, an amp and a yagi and go out as a
"rover"; 3 or 4 kW ERP down the bear's craw for a while then move.

Sigh....

Take a look at this month's issue of CQ for a possible explanation of
the problem.

To sum it up briefly: PAVE PAWS is a phased-array radar system, with
a large number of individual turnstile antennas on each side. During
reception, the signals picked up by the various individual antennas
are combined electrically/electronically, in ways which cause them to
mix in-pase for signals coming from the desired direction and
out-of-phase for other directions.

Older-generation phased array antenna systems perform the phase
shifting by switching individual phase shifters (delay lines or
similar) in series with the feedlines from the individual antennas.
The delayed signals are then combined and detected. If you want to
point the beam in a different direction, you change all of the
phase-shifter delays.

The newer generation of phased-array radar systems actually digitizes
the incoming signal at each antenna, and then does the linear mixing
(addition/subtraction) entirely in the digital domain.

Why the change? I gather that it allows for both a finer degree of
control of the delays (allowing higher resolution in beam-pointing),
and also allows multiple different delay-and-combine operations to be
performed in parallel (just add banks of DSPs), allowing one to track
multiple targets simultanously.

The disadvantage of this new system (as stated in CQ): it has rather
less ability to reject off-axis signals than the older delay-line
method of phasing. In the delay-line system, off-axis interference
would tend mix out-of-phase *before* it was detected, and would
largely cancel out. In the new system, *every* individual antenna and
digitizer receives the interfering signal at full strength - there's
no phase cancellation in the analog domain.

This would leave the newer systems at a significant disadvantage with regard to saturation and desensitization by strong off-axis signals. It's not so much a question of false targets appearing, I think, but a question of the system losing the ability to detect the real targets. The digigal method of doing phase-shifting and beamforming is faster and more precise than the switched-analog method, but apparently somewhat less robust in this regard.

As Scotty said, "The more complicated they make the plumbing, the easier it is to plug up the drains."

Even weather radar can do that with drops of water. :-)

If I was trying to do real-time analysis of such weak signals with the goal of protecting the nation, I'd take advantage of every technical and legal option available to me to limit or remove the potential for interference from very strong local signal sources.

Do you also object to the "National Radio Quiet Zone" in West Virginia?

Bill Horne wrote on Sat 3 May 2008 under the thread 'Discussions' in RRAM:

>The Pave/Paws system that is pushing some repeaters off 70cm predates
>the complaints by several decades, and I take the military's new
>attitude to be another nail in the coffin of ham radio's former
>"favorite son" status at the Pentagon.

As a veteran of the US Army Signal Corps 1952 to 1960 and as an engineer who has been involved in DoD electronics during my civilian career, I've seen NO evidence that US amateur radio was ever in some "favorite son" status in the US military.

>It used to be that we hams were a corps of operators who could be
>pressed into service quickly during a war or other crisis.

Perhaps this was true in 1941. It was NOT true in 1952 when I voluntarily entered US Army service (during the Korean War active phase), trained at the Signal School at Fort Monmouth, NJ, and subsequently assigned to long-distance, high-volume message traffic handling on a 24/7 basis at a Far East Command Hq station in Tokyo. I served in that assignment for three years, had access to documents and reports on communications within the military and queried many on the (then) modern methods of communications by radio.

>From the military point of view of 56 years ago, having an
interest in radio or the more general electronics field is only
important towards assignment in a particular military occupation
specialty (still familiarly called 'MOS'). Knowing on-off keying
CW skills via amateur radio MIGHT get one assigned to Field Radio
school (then the only Army MOS actually requiring OOK CW skill).
Field Radio MOS then involved using HF from a truck-transportable
station that was also equipped with teleprinters; teleprinted
messaging was the norm in the Korean War (active phase '50-'53).
The MAJORITY of 'radio' communications back then, a half century
ago, was by VOICE and that over line-of-sight ranges. Military
radio plans in the field were already organized into three
overlapping radio bands from high HF into low VHF, the bands
subdivided for infantry-artillery-armor unit use. No one needed
any morse code skills to operate those radios then. Indeed, it
was more akin to one-way talking on a telephone, something that
most civilians had already done in the 1950s.

>Now, with
>Morse as deeply buried as its creators and military electronics too

>secret to be entrusted to soldiers and sailors who haven't been vetted
>for security clearances, we're yesterday's news in the E ring.

I have NOT seen any of that "burial" nor of the "secrecy" alleged to any Pentagon "ring" in my Army service nor in the many years that followed as a civilian working on DoD contracts involving communications. The "secrecy" is actually on a very low Confidential level, the lowest of the three classifications. As a matter of fact, most Army radios of a half century ago where NOT used by signal personnel nor did they ever require any sort of security classification; no more so than revealing ANY military information to the enemy on anything.

I have no personal knowledge of what actually transpires in ANY "ring" of the Pentagon. I must depend on periodicals and documents published by defense electronics and electronics professional associations to yield such information. In those, and in archived copies of "Signal" (a quarterly of the Army Signal Corps, available new to signal personnel) there has been NO such statements of any "favoritism" expressed from a half century ago to today.

SECRECY in communications is regularly carried out today by UNvetted "soldiers and sailors" using a variety of cryptologically embedded (but selectable) means within radios. The standard small-unit (battalion or below) field radio is the SINCGARS family operating 30 to 88 MHz. The first SINCGARS went operational in 1989, almost two decades ago. Over 300,000 R/Ts basic to the AN/PRC-119 man-pack transceiver have been built by ITT, Fort Wayne, IN. More are available in HTs built by other firms plus the contracts awarded to Harris Corporation for newer, smaller SINCGARS-compatible multi-band radios. All of that family have their coding set by a "hopset" entry (encryption key and frequency-hopping sequence settings) which IS controlled by a "vetted" signal officer. The actual coding method is digital, beginning with a pseudo-random sequence generator involving digital feedback of a digital shift register could be known by an unfriendly...but the permutations of possible keys is so large that it is impractical for them to carry around super-computers in the field to defeat the cryptology in time to be effective. Note: The electronics technology to do all that has been known (and most things published about it openly) for over three decades, some of it public for four decades. In short, today's US military CAN use very robust, secure codes to allow UNvetted military personnel to communicate. They have had the capability to do so for nearly two decades.

PAVE PAWS has been around for decades. It is in the technology classification using multiple receivers to decrease the antenna beam width with an ability to enhance phase shifting of the incoming wavefront (allows other processing refinements of returns). Anyone can gather information on its general technological structure. Since it IS primary in its assigned operating frequency and IS part of

National Defense, that National Defense ought to be considered
primary by US citizens who wish to survive. Is a radio hobby
more important than national survival?

>We'll have to find another reason to justify the allocations we enjoy.
>It's going to be hard work, and not nearly as easy as learning Morse
>(not that that would help now). We're going to have to get better - in

>anlternative to traditional communications during hurricanes, floods,
>earthquakes, etc.

Please leave the morse code test issue OUT. That has been settled
for US amateur radio by the FCC after much, much debate for too long
a time.

IMAGE for the general public MUST be aimed OUTSIDE of amateur radio
publications. It cannot remain the insider topic WITHIN amateur
radio groups or publications. If it is REALLY there then it could
(and should) get out into the mainstream. Such emergency good works
news just haven't gotten out to the general public. The public sees
FCC issues as they affect broadcasting and cell phones in the national
news. maybe something about business radio of public safety radio.
Amateur radio news is not an important issue for such media.
The public has rarely seen amateur radio communications during
emergencies during national news...it HAS seen various National Guard
units and local government agencies doing communications on the news,
including FEMA equipment (going back to 1994 and the Northridge
Earthquake in January with quickly-transported video message displays
relayed by satellite for their own health-and-welfare messages seen
in handwriting of senders and shown on local TV).

I'm not going to comment on the Katrina hurricane situation. That
involves many more NON-amateur radio policies among local and state
agencies. The Katrina hurricane happened over two years ago and
the USA has had more emergencies since then. Rehashing the Katrina
situation does NO good in attempting to get the word out to the
general public about amateur radio. If ham radio is really as good
as some declare it, it should be worth national attention. It has
gotten very little on the national news in the last half century.
QED.

One thing that should NOT continue is to keep thinking in the
paradigms of pre-WWII 'radio' as is often presented in amateur
radio magazines. Technology has gone through several plateau jumps
of advancement since that long-ago time. Fantasies of some amateur
radio licensees are still rooted to back then. Those are lost in
the reality of today's radio capabilites and uses. The general
public has its own fantasies and it is foolish to attempt trying
to tell them other fantasies.

Amateur radio is a HOBBY. Let's try to focus on that.

Model vehicles are a hobby for others. The Academy of Model Aeronautics doesn't pretend to advance the state of the art of aviation but it was successful in lobbying for a hundred frequency channels for radio-control two decades ago. Consider that hobbyists are citizens and that the US government does listen to its citizens. Work from that basis.

Technical for sure but it appears that even technology available to
the general public isn't in (effective) use.
A known and fixed "target" in ANY digital processing system is very
easily noted and then removed from the data stream.
Legal resources? Sounds like the typical "When all else fails, blame
the ham" excuse.

>Do you also object to the "National Radio Quiet Zone" in West
>Virginia?
Absolutely not! And, all a ham has to do there is to coordinate in
advance. They have MANY issues with RFI from non-ham sources to
contend with there.
Wonder if PAVEPAWS is going to start shutting down microwave ovens and
wireless dog fences next? :-)

Bp
PS - No complaints w/ the government entity but w/ the contractor(s).

They obviously don't understand what amateur radio is all about.

Maybe - or maybe not. Secondary status means no interference need be
tolerated by the primary.

There used to be a 50 watt limit on 420-450 MHz for amateurs due to
the possibility of interference to radar.

> It used to be that we hams were a corps of operators who could
> be pressed into service quickly during a war or other crisis.

That's still the case. But it doesn't mean that the primary users of a
band have to put up with interference from secondary users.

I'm not sure what you mean by "Morse as deeply buried as its
creators".

We hams continue to use Morse Code on the air - extensively, too!
MARS is running Morse Code nets again, on an experimental basis.

It's true that Morse Code has all but been eliminated by the US
military for its own communications uses. That's no surprise, even
though Morse Code was used extensively by the US military in both
World Wars, Korea, and Vietnam. But that doesn't mean hams should stop

using Morse Code.

> We'll have to find another reason to justify the allocations we
> enjoy.

How about these:

1) Public service communications (not just in emergencies, but for events like parades, marathons, bike races, etc.) Remember the search for Space Shuttle debris a few years back? Amateurs provided communications for at least some search groups, and it turned out to be more useful and flexible than cell phones or other radio services.

2) Education in radio and electronics. Learn-by-doing, IOW. Recently, ARRL ran a homebrew contest to design a 40 meter CW/SSB transceiver that would use less than $50 in parts. Several entries met all the requirements, and a winner was recently announced. What better way to learn radio than by building an operating a homebrew station?

3) Historical preservation. We have museums, historic districts, etc., in other areas, why not in radio? We hams have shown that old and new technologies can coexist, and an active operation is so much better than a dry nonfunctional museum display.

4) Experimentation/wilderness area. Most of the rest of the radio spectrum is channelized, digitized, and carefully planned as to its users and uses. The amateur bands are like a wilderness area, without all the central planning and channelization, where operator skill and technical knowhow can try all sorts of new and old things.
And where all citizens who can pass the basic tests for a license have access to lots of spectrum, modes, and activities.

> It's going to be hard work, and not nearly as easy as learning

Morse Code is still worth learning, IMHO.

Agreed - but also as a fun thing to do. Emergency and public service comms are just one part of what hams do.

The key factor is that the "served agencies" want different things today in the way of communications. In some emergencies they won't need hams at all, in others they will really need amateurs to help out. But they're the customer, as it were.

Because they probably bought cheap amateur equipment, opened it out,
and then found out that there weren't any channels available in the
450-470 MHz band that they could get licenses and frequency
coordination for. Several sports events did just that until they got
caught. One of my "day jobs" is as frequency coordinator for systems
in the 450 MHz band, and we run into this all the time. The Congress
refuses to give the FCC the necessary funding to apprehend them, and
the Justice Department refuses to prosecute what they claim is petty
offenses.

I've ranted about this before. I'm glad that Chris Imlay (ARRL
General Counsel) got on this thing as hard as he did. We all owe a
round of thanks to him.

The ham who gave me my novice exam, WA1BGR (SK), had a 10 KW generator in his backyard that he received from Air Force surplus via MARS. Not your $2,000.00 toilet seat, to be sure, but certainly a step up from the equipment available to the average ham, especially in 1964 New Hampshire, where power failures were a regular event. Would you be more comfortable if I said "poor relation" instead?

The fact is that equipment and expertise flowed from the military to the hams who were willing to work for it. That couldn't have happened by accident, and I don't believe it was an accident that ham allocations in shortwave bands survived during the era before geostationary satellites, when there was pressure from other governments and from corporate users here to carve out larger portions for broadcasting or commercial use.

I said we were a trained corps of "_operators_", not just CW operators. I know that military radios almost always use voice: I ran the Navy MARS station at Danang in 1971 and 1972. I got the job because I had a ham license and I was there, and the unit commander cared about what I could _do_, not what my MOS was.

FWIW, CW still came in handy on a couple of occasions: when signals dropped too low for phone patches, I could slide the KWM-2A down to the ham band and operate "maritime mobile" on CW to get health-and-welfare traffic through. One occasion I remember involved a seaman with a pregnant wife who was headed home on emergency leave due to complications of some kind: I'll never forget the look on his face when I read him the reply to the "ARL Two, ARL Nineteen" priority message I had sent minutes before - "Your wife and newborn son both OK congratulations dad".

Of course, Health and Welfare traffic isn't a military necessity, but only a fool would neglect the morale of his men, and it didn't matter to the CO that I knew CW or that I used SSB most of the time - what _mattered_ was that I knew about long-path propagation, about how important it was to scrape the corrosion off the coax connectors, and that I could get the job done. They don't teach anything about operating "maritime mobile" at Fort Monmouth.

Well, I suppose anyone with a soldering gun could fix a KY-28 when the pins come off: but only a ham would know that he could get solder from the tube pins of a trashed PRC-25 and use a fire to heat up a knife for

the job. It wasn't me, but I know it _was_ a ham that did it.

I could be sarcastic and say "What a surprise! An official publication
that didn't talk about unofficial policies!", but I'll just point out
that WA1BGR had his generator, and lots of other hams who put in the
time with MARS had those and other trophies to show for their work,
including Model 19 TeleType sets when they were still _the_ standard
means of digital communication, temporary antenna masts that could give
a club a winning edge on Field Day, and even access to military training
for their sons that gave the young men a competitive edge in ROTC
scholarship selection.

It's at least as important as not allowing oneself to be swayed by
jingoistic appeals to misplaced patriotism. Even assuming that PAVE PAWS
accomplishes it's stated mission and provides warning of a
submarine-launched nuclear attack, and even assuming that anyone
survives such an event, Ham Radio operators and equipment would be
essential to keep life going.

> a time.

You're the one who brought it in: as I said before, we were a trained
corps of operators, not just CW operators. Hams aren't just trained to
pound brass: those that homebrew their own gear or compete in Field Day
or participate in disaster-preparedness are trained to think on their

feet, and that means they care about getting the job done, not the mode(s) they use to do it.

> IMAGE for the general public MUST be aimed OUTSIDE of amateur radio

That's the problem: the agencies that welcome our support are very good at claiming the credit and putting _THEIR_ brand name in front of the public, but ham operators must become more agressive and effective at establishing *our* *own* identity. When you lift the veil that covers the inner workings of most "public service" organizations, you will find that their first priority and best-funded effort is advertising _their_ name and _their_ accomplishments.

Wearing a "Red Cross Volunteer" shirt when the TV cameras arrive doesn't help ham radio: we need to have "Amateur Radio Emergency Service" or "Radio Amateur Civil Emergency Service" and similar labels on our backs so that the public realizes that we're still out there and able to help anyone that needs it, not simply a part of the Red Cross or other agency.

> The public sees

[snip]

> If ham radio is really as good as some declare it, it should be
> worth national attention. It has gotten very little on the
> national news in the last half century.

That's our fault, not someone else's: noone is awarded national attention because they're "worth" it, no matter how hard they work at going good. We'll get national attention when _we_ make it a priority to do so - not only during, but before and after the events that draw media attention. All the other players are vying for their 15 seconds of fame, and we're fools if we _assume_ that anyone will give away so much as 15 milliseconds to us.

> One thing that should NOT continue is to keep thinking in the
> paradigms of pre-WWII 'radio' as is often presented in amateur

> public has its own fantasies and it is foolish to attempt trying

> to tell them other fantasies.

I don't think in terms of "pre-WWII" radio: I think in terms of what can be accomplished with today's tools using today's training. However many "plateau jumps" technology goes through, the reality is that it will still require operators on the ground to set it up, to maintain it, and to safeguard it during operation.

I don't presume to know the general public's fantasies, but we're not going to be fantasizing when we plan how we'll make the public aware of our status and our achievements, just as other organizations and agencies do.

[snip]

Long story short: what's important to the media is selling soap. That's what they make money at, so that's what they pay attention to. In order to sell soap, the cameramen seek images that they know will keep the viewers tuned in during the soap commercials. The Red Cross knows this, the Salvation Army knows this, and the National Guard officers assigned to media liason (that _is_ a separate MOS now, isn't it?) know it too.

They help the media to sell soap, and they get their names and their agenda in front of the public as a result. If ham radio is to have any influence in Washington or at the International frequency allocation conferences, we must learn how to sell our own brand of soap.

HTH. YMMV. HAND.

Well, here in the USA amateurs are definitely the secondary users of
420-450 MHz.
So while we can complain, we don't have the same "standing", as it
were.

I think the radar system can indeed discriminate. One problem, I
think, may be this:

Radar that uses a single antenna for both transmit and receive cannot
"see behind" a
reflecting obstacle, nor an interfering RF source. So the amateur
repeater casts a "shadow"
as it were.

To make it more of a sporting course, the amateur signal is
intermittent, and FM. Which may look
like all kinds of things on the radar display.

>
> Sounds like some real shoddy engineering took place at taxpayer

Maybe, but probably not. Some things are fundamental limitations of
the physics involved.

> I can think of 3 or 4 ways to remove false targets w/o
> loosing any system level accuracy or sensitivity. In fact, didn't
> they perfect that during the cold war?

Of course the processing system may be able to be programmed to ignore
the amateur repeater - which would make it the perfect place to hide
something.

Remember that the radar system in question is probably being used in
roles it was not originally designed for. That's probably why the
problem didn't show up before. For example, if the radar was meant to
look for high-altitude intruders, things like ground clutter and RF
sources below a few hundred feet could simply be ignored. If the
system is now being adapted to look for low-altitude and water-bourne
intruders, those RF sources become a big headache that the system
wasn't designed to handle.

> needs to do is buy a 440 rig, an amp and a yagi and go out as a
> "rover"; 3 or 4 kW ERP down the bear's craw for a while then move.

Maybe. But the result would probably be just the opposite: firing up that setup would announce his exact bearing and altitude. IOW, announcing "HERE I AM" to the radar system. With no legitimate sources of RF in the area, and no "shadows" to hide behind, finding the intruder would be easier and faster.

This sort of thing isn't new. When you don't know the exact threat, you try to plug every possible hole.

Way back in WW2, the Allies spent a lot of time and expense developing receivers that had extremely low local-oscillator radiation. Only approved receivers could be used aboard Allied vessels. The concern was that enemy U-boats could detect and find Allied convoys by listening for the local-oscillator radiation. When you have dozens of ships all monitoring the same frequency using big antennas and unshielded receivers, the total LO radiation could be heard a long way off. And while radio silence could be maintained in a convoy most of the time, the receivers were needed for weather reports, U-boat warnings, distress calls and such.

It turned out that the U-boats did not listen for the LO radiation after all. But this was not known until after the war.

The first ham I ever met was Sam, K3RTR, (SK). He had a complete RTTY setup in his basement shack (near the post office in Upper Darby, PA, back in 1966 or so. He was very active in Navy MARS, too. Even a 12-year-old newcomer like me got the connection.

I think the equipment flow was both an incentive for the volunteers and a recruiting tool. It certainly was better than simply scrapping older stuff, or getting a few pennies per pound in surplus.

I recall that, officially, the equipment handed out through MARS channels did not actually belong to those who got it; they could not sell it and if MARS ever wanted it back they had to return it. In reality I don't think the Navy ever came looking for Sam's Model 19, but of such distinctions are entire programs made possible.

As to the survival of the amateur HF bands, I think there were several factors involved. One was the fact that those bands were relatively narrow - from 1958 to 1979, we US hams had access to only 3.3 MHz of the 27 MHz of bandspace from 3 to 30 MHz. More than half of that 3.3 MHz was the relatively-undependable 10 meter band, and parts of 75 and 40 meters were shared with SW broadcasting. So the potential gain in spectrum to be had from amateurs was small.

The HF amateur bands were and are allocated by international treaty. If the US tried to change that treaty to give more bandspace to the military, it would be clear to the other side, of course.

There was also the influence of well-known amateurs such as Gen.
Curtis LeMay, Barry Goldwater, Art Collins and even Arthur Godfrey.

Besides, there was plenty of historic precedent. Before WW2, the Army
had used parts of 80 meters for communications during training
exercises. When the war ended, US hams did not get all their bands
back right away, as the various services needed time to move off of
them. Note that it took many years before we got all of 160 back
(which is MF, not HF, but it proves the point).

Great story!

I have known a few amateurs who were military radio operators in Korea
during the early part of that conflict, and they did indeed use Morse
Code for military communications.

> Of course, Health and Welfare traffic isn't a military necessity, but

Like I said, practical radio skills....

This sort of thing shows up in various ways.

Way back in EE school (class of 1976), I was in a class where the
day's subject was analysis of a common-source JFET amplifier with
tuned input and output circuits. Prof. K. drew the circuit on the
board and asked us what it would do if the tuned circuits were
resonant at about the same frequency.

Everyone in class said it would amplify signals near the resonant
frequency of the tuned circuits. I offered that if certain conditions
were met, it would oscillate. The other students thought I was nuts
because we hadn't gotten to oscillators yet, but Prof. K asked why I
responded that way and what the conditions would be. I replied that
real JFETs have significant capacitance between gate and drain, and if
the gain were high enough, etc., the conditions for oscillation would
be met. Prof. K said "That's right, very good" which astounded the
rest of the class.

Then he asked "You're a ham radio operator, right?" which surprised me
even more, since I didn't know him well at all. I said I was and he
replied that the hams in his classes always knew the practical end of
things and how to turn theory into practice.

Exactly. Lots of examples of that, even today.

> the agencies that welcome our support are very good

I would say "assertive" rather than "aggressive", but the concept is
basically the same.

That's a concept that needs to be pushed. One of the modern paradigms
is to deemphasize the need for skilled, trained, knowledgeable
people. It's always as if the technology just happens.

Perhaps that view is changing a little - note the cell-phone TV
commercials where the huge crowd of people follows the customer with
the cell phone.

> I don't presume to know the general public's fantasies, but we're not

> influence in Washington or at the International frequency allocation
> conferences, we must learn how to sell our own brand of soap.
>
Actually, I would say we have several kinds of soap to sell. Emergency
and public-service comms is certainly one kind, but there are many
others. All have a place.

In fact, this is what can make amateur radio difficult to sell. There are so many different activities that are part of Amateur Radio that it's tough to come up with a quick visual or sound-bite. Whether it be the ham pounding brass on 80 meters with a homebrew hollow-state rig, or the ham on the shuttle talking to middle-school kids, or the ham providing communication at the Boston Marathon, the next hurricane, earthquake, etc., it's all ham radio and it's all good.

Getting that message across is our challenge

>problem didn't show up before.

I haven't chimed in because I had a foot on both camps, so to speak.
The problem is not new, and was handled on a case-by-case basis until
it became a "real big" problem when the system was upgraded. Most if
not all of the ham repeaters which fall in the "circle of interest"
for the Beale AFB site were in my District (San Francisco) and I
knew/know several of the repeater owners personally.

A practical example of the problem in the non-military world: One
would have problems using the usual consumer type in-line cable
amplified splitter with a VHF/UHF receiver such as a scanner because
the receiver deals in signals of the order of 0.5 uV or less while the
amplifier is designed to deal with signals in the order of 1 mV or
more and consequently the noise floor is much higher.

Whether the contractor(s) designing the system and/or running the
tests are competent or not is an exercise left for the reader.

I am told by a ranking MARS member that the loan/giveaway program stopped many years ago. We used to see a lot of military surplus gear on the market even up into the late 1950s - I remember the ARC-5 stuff that you and I got started with, and the surplus tank low-band FM receiver that I had for monitoring the Sheriff and the Highway Patrol before crystallized receivers and scanners became consumer items -- but that's all history now. Post-Korean War stuff never hit the market.

I am told that what the military doesn't give/sell/loan to foreign governments and even our own National Guard is scrapped (i.e. crushed beyond usefulness) , no doubt due to the pressure of the equipment manufacturers (yes, there are still quite a few left in the USA) who are more than happy to sell new stuff to amateur and commercial users alike at listed prices.

Incorrect. Amateur radio operating protocol is nothing like what
is used in the US military.

That "case" might have been valid prior to WWII but that time
period was 67 and more years ago.

>> Now, with Morse as deeply buried as its creators and military
>> electronics too
>> secret to be entrusted to soldiers and sailors who haven't
>> been vetted

>
>I'm not sure what you mean by "Morse as deeply buried as its
>creators".

I would suggest you borrow a 'communications receiver' that can
tune in the HF spectrum OTHER than amateur radio band allocations.

For one thing, the US military had all but abandoned morse code
mode before 1953 for any mass-volume messaging connecting North
America to military bases around the rest of the world.

For another thing, the US military has abandoned HF for any mass-
volume messaging and now uses secure military communications
satellites, troposcatter, and the DSN (Digital Switched Network)
for 24/7 communications. DSN has very robust security and is the
major system of 'flash' alerts to land bases. Alerts for
submarines (to listen to HF thru microwaves for the main message)
are slow-speed encrypted data at VLF that can be received while
submerged. The US military still keeps HF radios on a standby
basis but only uses them for periodic operational checks. MARS
is not a part of the daily US military messaging routine, although
it is much closer to the use of operations protocol than amateurs.

>We hams continue to use Morse Code on the air - extensively, too!

Please define "extensively" (with or without exclamation mark).

No one has stated or implied that amateur use of morse code was not "extensive." In an unofficial poll at the ARRL website some time ago, #1 communications mode on amateur bands was voice.

>MARS is running Morse Code nets again, on an experimental basis.

Military Affiliate Radio System mission was changed about five years ago to act in accord with other US government agencies to (ostensibly) link them together. Army MARS Hq is at Fort Huachuca, AZ, the same military base that houses the Army Military Intelligence training facilities.

>It's true that Morse Code has all but been eliminated by the US
>military for its own communications uses.

That is not true. For routine tactical or strategic communications the US military has abandoned morse code.

The M.I. school at Fort Huachuca still trains some in morse code signal intercept analysis but that is NOT communications per se. To attempt stating that SIGINT operations "use morse code" is like saying the Army still uses muskets and Revolutionary War uniforms because one Army unit in Washington, DC, has them for ceremonial duties.

>That's no surprise, even
>though Morse Code was used extensively by the US military in both
>World Wars, Korea, and Vietnam.

Morse code was used "extensively" in World War ONE. In that 1914 to 1918 period voice communications was relegated to wireline communications circuits. Teleprinter circuits had already been established before the US entry into WWII, including its use on USN ships (see the 'SIGABA' descriptions on various websites for online encryption capability over teleprinter as early as 1940).

As a soldier during and just after the Korean War, doing mass-volume communications via HF, I can assure you that morse code was NOT used for such communications about logistics or military planning plus (in a secondary basis) broadcasting news and 'health and welfare' messages carried for the Red Cross and other agencies to military members.

The vast majority of communications carried on during the recognized active period of US involvement in Vietnam was voice and teleprinter. Like the Korean War, the Vietnam War was not a 'true' war yet service members were killed or wounded as a part of that actual warfare.

During the prosecution of the Korean War, the US military routinely handled about a quarter million messages a month through military facilities. That was nearly doubled for the Vietnam War. Morse code communications MIGHT have been used in rare instances for both wars but its role was so minor as

to be discounted compared to the MASS of messaging needed to maintain troops and equipment far from the USA.

All of that military communications information is public and available to anyone who cares to look for it. I would suggest the U.S. Army Center For Military History as a starting point for very detailed historical accounts of the US Army since the Revolutionary War.

>But that doesn't mean hams should stop using Morse Code.

NOBODY has said "hams should stop using" it. Please try to restrain generating another sub-thread about it. Please try to educate yourself about radio uses outside of amateur radio as described other than the ARRL publications or website.

In order to EDUCATE THE PUBLIC, I would suggest channeling your promotion OUTSIDE of amateur radio venues. The general public and lawmakers don't much look into ham radio venues.

In 2004 electric power failures in western Washington state were a
regular event. All rural homes in Kitsap County, WA, have fireplaces
and stacks of wood outside for that...despite electric power rates
there being among the lowest in the USA.

[snip]

Well, I seem to have sparked quite a debate..!

However, a lot of it seems to have gone more than a little OT (which doesn't surprise me and is actually quite interesting, so don't consider it a moan..!)

But.. what are the thoughts on my original point, that of the differences in attitude of the authorities in the US and UK about protection from interference from commercial operators using frequencies within the amateur bands..? It seems to me, unless I've misunderstood, that in the US you can still claim a certain degree of protection from other users, whereas here we can't.

I still have some ARC-5 stuff in working order, and lots of parts. A
couple of LM frequency meters, and a couple of ME-297 VOMs.

I got started with stuff a lot more basic than an ARC-5, too.

At least here in Philly, WW2 surplus was common well into the 1970s.
Fair Radio Sales, to name one mailorder place, was still selling WW2
surplus at low prices in that same timeframe. The N2EY library has
some of their catalogs....

For example, the 1976 Fair Radio catalog lists the BC-457 and BC-458
at $14.95 each (new condition), and the R-23, R-25 and R-26 at prices
from $15.95 to $22.95. Earlier catalogs have a much wider selection at
much lower prices.

>Post-Korean War stuff never hit the market.

Not in the quantities of WW2 stuff, obviously.

I think that one factor in the enormous amount of WW2 surplus was that
American industry was pouring the stuff out in enormous quantities by
1945, building up for at least another year of full scale combat, when

the war suddenly ended. That situation has not recurred since.

A look in the 1994 Fair Radio catalog shows the following:

Collins 490T1 (CU-1666) antenna coupler for 618T, $400 used

AM-6155/GRT-22 RF power amplifier, 225-400 MHz, 50W output, $235

R-1051B/URR HF receiver, used, $750

RT-618C & AM-3007 HF transceiver set, $795

RT-749/ARC-109 UHF transceiver, 225-400 MHz, $495

RT-594/ARC-3A HF transceiver, $210

R-390A receiver prices from $135 to $330

(you get the idea - there's a lot more)

So there must have been some path for some surplus to the US market, although except for a few things the prices would be a problem.

> I am told that what the military doesn't give/sell/loan to foreign

Excellent! I am delighted to hear that, but not surprised.

Add K2ORS, aka "Shep" (though he used the name Parker on the ham bands) to the above list.

73 es tnx for the info

There is considerable history of frequency allocations available at the International Telecommunications Union (ITU) website. Some of it is free for download or perusing. The ITU-R handles largely civil radio allocations but also takes into account military uses. Mass-volume messaging just on HF bands by common carrier services were already established in the latter half of the 1930s. That is also explained in the 'Collins Sideband Book' by Bruene, Shoenike, and Pappenfus. The migration of mass-volume messaging from HF to microwaves via commsat and, later, high-speed optical fiber cable, were done to avoid the ionospheric disturbances common to HF.

WARC-79 (World Administrative Radio Conference of 1979) yielded more bands to radio amateurs worldwide. There were some added expansions to 'SW BC' but, by bandwidth count, amateurs got more than broadcasters. The '40m interference' issue of broadcasters versus amateurs took until WRC-03 (World Radio Conference of 1953) to achieve a compromise that won't be complete for a few years from now. Broadcasters were granted new bands in HF at WRC-03. In the last four decades there have been MANY changes to HF use by many radio services...and FAR MORE above 30 MHz. The migration of common carrier radio services from HF provided more space for individual fixed radio communications on HF. There is still room for other radio services on HF but few want it.

The international radio use of the spectrum above 30 MHz over the last half century has been so extensive it could fill a small book to contain its changes. Those who have access to the huge table of frequency allocations in Part 2, Title 47 C.F.R. over the years can infer what they want. It covers civil and government frequency allocations from 9 KHz to 300 GHz.

The migration of common carrier services from HF took about a quarter century to complete. It didn't happen overnight. The number of slots on the geosynchronous orbit were filled over a decade ago.

'Shortwave' broadcasters like their migration to satellite relay because it relieves the outages occurring on HF as the ionosphere changed. That's unfortunate for SWLs who were

accostumed to essentially free programming but is a definite improvement of the fading and other effects on purely HF paths. Successful tests of DRM (Digital Radio Mondial) have been going on for at least four years. Adoption of DRM as a standard 'SWBC' mode is delayed by such listeners not desiring to obtain DRM-compatible receivers. Technically this digital broadcasting scheme has worked out very well.

So far there have been NO auctions established for US civil radio services below 30 MHz. The HF ham allocations can be said to be safe from takeover. Speculating on HF being gobbled up by capitalists is more fantasy than reality.

Long-haul mass-messaging services have been increased by 'repeaterless' fiber optic cables (amplification pumping and signal reconditioning only required at land stations). One of the longest today is the double 4 GPS optical fiber carrying digital signals running from the UK through the Med, under the Indian Ocean, around southeast Asia, then north to Japan. At 10 bits per circuit, each 4 GBS path can carry 100,000 circuits simultaneously...and full-duplex at that. There are many of other optical fiber paths in the world, over land and under water.

USA radio amateurs were denied a full band on 60m due to failure of proponents from recognizing that many fixed HF frequencies in-around that band had already occupied those spots for decades. USA hams got only five separated channels, each just big enough to carry one SSB voice channel. I see that as just poor planning by the ARRL who petitioned for it.

HF on the EM spectrum has far fewer users (other than hams now than it did four decades ago. The US military uses it now for backup (with limited traffic handling) as a sort of last-resort contingency use.

Of course, US hams use HF 'extensively.' For hobby purposes. It is NOT 'pioneering the [HF] airwaves' (that being done in the 20s and 30s) but some like to imagine they are doing that.

The Military Affiliate Radio System was never a part of the tactical or strategic radio communications effort/network/system within the US military since it began (under another name) in pre-WWII US Army. It was generally considered to be a Public Relations activity akin to Special Services functions such as the AFRS (later changed to AFRTS, Armed Forces Radio and Television Service) or the Special Service traveling sports teams. Those of us who did the 24/7 grunt work of keeping all units communicating with one another did not consider MARS to be 'great.' None of us 24/7 grunt communicators required any federal license to do our jobs.

>had sent minutes before - "Your wife and newborn son both OK
>congratulations dad".

FWIW, I can relate a similar tale. The 250-TTY torn-tape relay floor at ADA Control had many operators on each shift. Each was assigned a group of circuits. TTY tape was chadless, both punched and printed. Red Cross and other agencies got lowest priority handling after the start of the 'radio day' (about 2 AM local time). One TTY operator spotted a message to another on his shift. He showed the tape to his friend who was overjoyed at the news that he was now a newborn father. Red Cross people wanted to pass the message to recipient in person. New father blurted out "I already knew it." That sparked a lot of indignity to the officials who only thought of 'procedure' and 'order of things.' He was reported to his company commander. CO was caught in a bind, being good to his men but also having to play politics with higher officials. I did some mild pleading of his case,

suggesting Company Punishment (similar to Captain's Mast in USN). CO caught the drift and, knowing I had been scheduled as CQ (Charge of Quarters) that night, remanded his 'punishment' to me to handle while on CQ. Newborn father was still feeling good despite being chewed out so his 'punishment' was largely to keep me from falling asleep while on the 5 PM to 8 AM next-day CQ period. NO MARS involvement there, none needed.

BTW, a military purchased Collins KWM-2 is the AN/FRC-93 and is the commercial version with all crystals, not limited to amateur radio bands (of 1975). There's an FRC-93 TM on the Internet, PDF size of about 6 MB. I have one. It is essentially the technical manual written, produced by Collins.

In three years of my assignment with ADA in the Army, there was only ONE day of a two-hour total radio blackout on HF in 1955. Minimum RF power output at ADA was 1 KW on HF. That is only 10 db higher than typical ham radio HF transmitters. All operations were 24 hours a day, 7 days a week, and remained that way until 1963 when Army downsizing had all ops transferred to USAF, equipment, sites and all. USAF gave it all up with sites, buildings given to the Japanese in 1978. That was 30 years ago.

Personally I'd rather have, say, 1 MHz of worldwide-exclusive-amateur allocation than 2 MHz of shared bandspace. But that's a minor thing, really.

The big problem here in the USA with regard to amateur bands is that our FCC tolerates too much RFI from unlicensed emitters. For example, plasma TVs and other consumer electronics are notorious RF noisemakers. The whole BPL controversy is a classic example of a bad engineering idea being pushed for the wrong reasons. There's lots more, but a lot of it boils down to lack of enforcement resources coupled with the idea that the RF spectrum doesn't need as much protection from noise pollution.

Recently, there was a particular brand/model of flat screen TV that radiated significant RF on the emergency-locator frequency. That caused quite a bit of excitement....

>"maritime mobile" at Fort Monmouth.

Fort Monmouth is the home of CECOM, the ARMY's Central Electonics COMmand. The US Army waterborne vehicles are limited to river-crossing large inflatables although some are sent to USN or USMC schools for landing craft, hovercraft training. The "AN/" in a military nomenclature stands for Army-Navy and has for 6 decades. Any soldier, sailor, or airman can operate an "AN/" equipment if so authorized. Land field communications equipment is usually built to withstand total submergence in water. That CAN happen on land.

Rest assured that field radio and radio relay students at Fort Gordon, GA, (Camp Gordon in the 50s) DID learn about short- and long-path [RF] propagation...and how to keep coaxial connectors, indeed all connectors clean and workable...and MUCH more. NVIS techniques have been taught for three decades at Gordon, usually referred to as 'Nevis' as its familiar name.

Fort Gordon has taught operation of the standard small-unit land radio for two decades, the AN/PRC-119 plus its mobile and fixed versions (same R/T), plus the airborne unit, the first of the SINCGARS family. SINCGARS compatible radios don't have frequency or band selectors in the usual sense. It has a touch-screen with display to enter both the code key and the frequency-hopping key as determined by the local signal officer. First operational in 1989, it was field tested in the First Gulf War, then used 'extensively' in the Second Gulf War plus Afghanistan. Digitized voice, digital data, selectable clear-channel or encrypted anywhere in the 30 to 88 MHz region. ITT Fort Wayne, IN, has made 300K+ of those and Harris Corporation now has contracts for more in a newer, smaller version. It is remarkably robust, especially in crypto mode, can be netted. Internal time base can be calibrated via GPS signals via an AN/PSN-11 'Plugger' by plugging it into a connector on its front panel. There are SINCGARS-compatible HTs now on duty in Iraq and Afghanistan.

>Well, I suppose anyone with a soldering gun could fix a KY-28 when the

The AN/PRC-25 was solid-state except for the single vacuum tube
in the PA. AN/PRC-77 was its fully solid-state version. Both
were VHF with channelized tuning (considered abhorent by a few
hams) but turned out to be mainstays for Vietnam field radio use.
Both are now obsolete.

Having seen the innards of both up close and personal, there are
plenty of places to obtain solder from it...if that was a real
necessity. Jury-rigged repairs have been going on with ALL
military land equipment since before WWII and not just by licensed
radio amateurs. <shrug>

Opponents to amateur radio use of anything could point (accurately)
to "jingoistic" statements of "misplaced patriotism" towards the
ARRL. <shrug> There are many sides to any issue.

>Ham Radio operators and equipment would be
>essential to keep life going. [after a nuclear holocaust]

I've had one complete physical exam since getting my amateur radio
license last March. My primary physician had detected no new
super-human powers in my body. :-)

That absolute statement is unprovable. Radio amateurs are as mortal
as any other human being. As one who has seen electronic equipment
developed for all possible 'radio' environments. Amateur radio gear
is NOT close to rad-hardened military equipment. It is essentially
consumer electronics grade although better than most consumer stuff.
Only two ready-made HT radios (as I recall) are advertised as fully
submersible.

Boosters of amateur radio licensee qualities tend to forget that there are many, many more 'civilians' who are knowledgeable and proficient in radio communications equipment and techniques. Their numbers may be MORE than the total number of ham licensees in the USA. Licensed radio amateurs in the USA make up only about a quarter of one percent of the total population.

>...Hams aren't just trained to
>pound brass: those that homebrew their own gear or compete in Field Day
>or participate in disaster-preparedness are trained to think on their
>feet, and that means they care about getting the job done, not the
>mode(s) they use to do it.

That's a lovely thought, but misleading. Lots of 'civilians' are also able to "think on their feet" and do so regularly. Utility repairpersons reacting to large-scale damage repair are one such example that I've observed up-close and personal.

My observation of 'Field Day' since its onset has been a radio contest carried out in a park on a nice day in June with picnic food. When QST had a two-page article on Field Day recipies, that pretty much wiped out any notion in my mind that Field Day was any 'emergency exercise.'

The following is just an informal observation...

Here in the USA, we have two regulatory agencies for radio: FCC, which does non-government radio, and NTIA, which does government/military radio. NTIA trumps FCC, of course. The radar-interference case mentioned elsewhere in this thread clearly shows who has priority on the band in question.

But your question is about *commercial* (nongovernment) users/ intruders into the amateur bands, where such use is not part of the regulations.

In theory, those intruders are breaking the law and should be removed by the FCC. In practice, the FCC is complaint-driven, which means amateurs must identify the intruder and complain to the FCC. Helping with such complaints is one of the major functions of the ARRL and its legal department.

But simply complaining to FCC does not mean the problem will be solved, because FCC's resources are very limited. The motorsports story referred to required a lot of work on the part of the ARRL and the amateurs involved.

Could you give some specific examples of the paradigms you mean, the "plateau jumps" in technology, and the fantasies you describe?

> Amateur radio is a HOBBY. Let's try to focus on that.

Amateur radio isn't *just* a hobby, though. The record of public service communication by radio amateurs shows there is a lot more to it, to give just one example.

> Model vehicles are a hobby for others. The Academy of Model
> Aeronautics doesn't pretend to advance the state of the art of
> aviation but it was successful in lobbying for a hundred
> frequency channels for radio-control two decades ago.

Let's consider that idea in detail...

Model control radio frequencies consist of those 100 channels near 70 MHz. Power output is limited to 1 watt and the transmitting antenna can be no larger than a quarter-wave monopole.

Model control isn't about using radio for its own sake, which IMHO is the heart-and-soul of amateur radio. Model control is about using radio for a single purpose, as a means to an end.

Does anyone think amateur radio should be limited by rules similar to those for model control? Or that the kind of allocations given to model-control enthusiasts would be adequate for amateur radio?

>�Consider
> that hobbyists are citizens and that the US government does
> listen to its citizens. �Work from that basis.

It seems to me that you are saying that radio amateurs should not talk about their roles in emergency communication (Hurricane Katrina, for example), public service communication (New York City Marathon), experimentation (K3TUP and cancer research), education (Space Shuttle hams), etc. IOW, all that should be deemphasized and ignored.

It seems to me that you're saying we hams should define ourselves as hobbyists *only*, and expect that to be the sole reason we have amateur bands and FCC/ITU protection.

Is that correct?

Ah, thanks. However, over here we do have "legal" intrusions into some of the amateur bands, most are in the microwave region, notably 10GHz, where we lost a sizeable chunk a while back.

The main one though is 431-432 MHz which is not available for use within 100km of Charing Cross (central London) and also for some distance around the military radar installation at Fylingdales in Yorkshire. In the London area I believe it's allocated to taxis of all things..! There isn't a lot of amateur activity in that segment, I think some wide-split repeaters may have inputs or outputs there but generally it's a low-occupancy segment of the band, so all in all it's not a major hassle.

It's the principle of the thing that annoys me, though. Even where we are primary users, such as 2m, we can claim *no* protection from interference, even if the cause of said interference shouldn't be there.

Actually, Len, the first "migration" was to the pre-fiber undersea cables. I was involved in moving Israel's circuits off HF onto the Haifa-Marseilles cable (and thence onto the TAT-5 cable) in 1967, several years before the parallel Intelsat satellite service was turned on. We had several ISB circuits to NY - double hop, mind you - and the rest of our circuits were HF to London, Paris, Athens, Moscow, and several other European cities and thence by landline and TAT-5 to the rest of the world. Of course, that all changed when Intelsat and the fiber cables came into service.

Very much out of the spotlight, states and counties have been setting
up HF networks on "commercial" frequencies for disaster relief, search
and rescue, and other functions where VHF/UHF won't do. I'm involved
with that here. This is in parallel with, not supplanting, the
volunteer services that amateur operators are rendering on HF, VHF,
and UHF through the ARES/RACES organizations. Not surprisingly, most
of the career professional Emergency Communication managers of these
governmental units are hams as well.

You've been saying that for years, Len. It's disingenuous at best.

It's accurate to say that none of you had to have an _FCC_ license to
do your job. In reality, the "Federal license" that was required was
the assignment to your job by military superiors - who could yank you
out of there for any reason, real or imagined, effectively 'canceling"
that "license". At least the FCC has to hold a hearing at which you
can defend yourself.

The first of which (TAT-1) became operational in 1956.

Both the coaxial (copper) and fiber cables under the oceans require repeaters if their length exceeds 100 km or so. Some of the early undersea coaxial cables with their vacuum-tube repeaters are still functional, but their capacity is trivial compared to the fibers.

Great story, Phil! Does any of that remain as a backup? My guess would be that it is long gone.

>From a capacity standpoint, satellites are the backup now in most places, because the fiber bandwidth is so much greater.

It wasn't just ionospheric disturbance that pushed the change to satellites and cable, either. There's only so much useful HF spectrum, and the newer technologies offer many orders of magnitude greater bandwidth.

>Of course, that all changed when Intelsat and
> the fiber cables came into service.

And it continues to change. In this area, direct fiber-to-the-customer is becoming the standard; many homes here have no copper communications and little if any radio reception at all. Everything comes through the fiber - telephone (multiple lines if you want), highspeed internet, and TV. The fiber is RFI-and EMI-immune, too. The biggest headache they present for us hams is that sometimes the

switching power supply for the customer equipment is electrically noisy.

IMHO the real threat to Amateur Radio isn't the possible reallocation of the HF amateur bands to other services (although that's always a possibility, and VHF/UHF are not nearly so secure).

The major threat today, I think, is that the bands we have - MF, HF, VHF and UHF - are slowly being made less-usable or even unusable by a combination of factors:

1) Lack of enforcement against intruders, such as unlicensed use of 10 meters by truckers and others, spreading out from 11 meters. This has been a problem since at least the 1970s.

2) Reduction in the number of housing units where a ham can have a reasonable antenna system. Boilerplate anti-antenna CC&Rs have been pretty standard since the 1970s in many areas, and once in place they are often impossible to remove.

3) Consumer electronics that are not adequately RFI proofed.

4) Consumer electronics and other devices that make excessive RF noise in the ham bands. As the number of such devices increases, the noise floor in many locations rises to unusable levels.

5) A regulatory environment where the above problems are simply not given any priority. (You know more about that than I, Phil!)

The biggest headache for the subscriber is that all of the eggs are in
one basket and all it takes is some bozo with a backhoe to sever the
cable (trunk or drop) and everything goes away.

Things must have changed since my initial training in international radio regulation in the mid-1960s where the British Post Office (the forerunner of the RA) was held up as a model of "we'll lock you up if you don't have a licence to operate there" - and the French were pointed out as an example of "the ordinary citizen needs a radio as much as he needs a machine gun".....hams were a grudging exception, and of course when cellphones became available, everyone got one because they knew that cellphones were not radios, right? <g>

Then again, the FCC in the US - where I ultimately spent most of my professional career - was also very involved in "catching bad guys". The epidemic of unlawful CB operations of the 1970s and 80s - for which most of the world's governments never forgave the US - and an unfortunate shift in regard to what the government's obligations were - changed all that.

Notwithstanding the historical precedents of military-civilian sharing of frequency bands, granting commercial interests licenses to operate in the amateur bands is basic bad regulatory policy. All of us old-time regulation professionals knew that as an article of faith. The new crop is guided more by the buck (or the Euro, or the quid) than by what good regulatory policy is.

As far as the military goes, I learned early in the game that de facto the military of any country can operate on any frequency that it so desires if (1) it doesn't interfere with anything operating in that country and it (2) doesn't identify. If it wants to play the gentleman game the country will notify the operation to the ITU Radiocommunications Bureau (ITU-R) which now does what the International Frequency Registration Bureau (IFRB) did before ITU reorganization. Whether the information is accurate or not is an exercise left for the listener.

Pikers! Why didn't they apply for 20 kW and REALLY cause
interference?? <g> It almost sounds like they are using something
"off the shelf" that is being used elsewhere where the ham band ends
at 430 MHz. I've seen this stuff before.

My gut feeling is that with the present "leadership" at the FCC
(despite the fact that several good friends are in the Homeland
Security and Public Safety Bureau and wouldn't support it but for
pressure from above) it will be granted on a secondary priority behind
all the other secondary priority users. I hope that I am wrong and it
is denied.

Another reason to support the ARRL Spectrum Defense Fund.

The main problem in the UK is not the commercial use of 431-432 in the London area, rather the proliferation of licence exempt low power devices. Everything from key fobs to weather stations and tower crane anti-collision systems. They are popping up quite legally all over 70cms.

Even one 70cms repeater was ordered off the air because it was stopping people from remotely opening their car doors in a nearby carpark!

The UK has a Pave Paws derivative at Fylingdales at that caused a ban on new repeater applications in 70cms, the military being worried about the increase in noise floor that additional signals would introduce.

Won't they have a bunch of bandwidth next february
when all the analog TV broadcasting goes dark? Then
they could choose a band that is even better at "building
penetration", etc.

Indeed. My friend Colin G3USA (great callsign, eh..!) tells me that in his
early days on air in the 60's an amateur could expect to be regularly
visited by an officer of the Radio Investigation Service who would check
your logbook and that you knew how to use a wavemeter for example.

In my 25 years of being licensed I've never been inspected once.

Good point: that explains a lot, doesn't it? It all comes down to money, and given a choice between something ready-made and tested that can be marked up 10,000%, or a one-of assembly that costs more than you'd ever dare to charge, the choice seems obvious.

Hmmm, you know, that also explains why 146-148 MHz isn't available to hams in large portions of the world. Lot's of rigs from the U.S. market, easy to buy and use, can be plugged-and-played anywhere the governments choose. Must have been a similar process for 220.

I guess we hams _have_ been experimenters after all: we provided the funding to design and debug reliable gear that will now make life easy for some entrepreneurs. It wasn't the kind of experiment I would have chosen to start myself, but C'est la Vie.

What ever happened to all that TV spectrum that's supposed to be made available for "homeland security" next year? Does a bomb-sniffing robot not qualify, or has the thought of participating in a spectrum auction frightened the manufacturer into an attempted "land grab" instead?

The answer is obvious. You know, I'd like to see Michael Powell's investment portfolio: I bet that there are a lot of good stock tips to

be gleaned from it.

If I had been asked to make a choice of whether they _should_ be
available, I'd probably have shaken my head sadly and said "No". Given
that the PRC-25 covered not only the Low-VHF public safety bands and
some TV frequencies, but also the aircraft marker-beacon channel, as
well as six meters, I'd have to (reluctantly) agree with whomever else
said "No" in this case.

It's a shame, but it's also easy to understand: the FCC was _very_ badly
burned by the Citizen's Band fiasco, and I'd bet other government
bureaucrats in and out of the military had that fresh in their minds as
Vietnam was winding down and the PRC-25's were filling up warehouses.

It's really more simple than that actually. At the end of World War Two, every one thought, "Well, that's the end of that. There will NEVER be another war now."

The military planners were looking at another 8 years of combat in the Pacific and on the island of Japan to bring a conclusion to World War Two. When the second atomic bomb was dropped, Japan threw in the towel and quit.

With the rather sudden end of the war with Japan, that left stocks for the planned additional 8 years of warfare with no place to use it.

So there really was more "war surplus" stuff available at the end of World War Two.

Most of the equipment used in Europe was left behind or just thrown off of ships etc rather than bring it back. Or we would still be seeing equipment for sale.

By the time Vietnam was over, the military, having found themselves fighting an enemy that didn't have any problems using our own equipment, they decided "No, that's not gonna happen again" and the move towards "demilitarizing" equipment rather than just auctioning it off by the pallet, or disposing it like the last time around.

I thought that they where going to auction all that new found spectrum to the likes of Google and Sprint to be used for nationwide data/voice services. I don't recall if they where going to slice out any for other service types but here's hoping they do. Seems like a small slice dedicated to this kind of thing might be useful.

I can imagine that with all the hoopla between the primary spectrum user on 440 and the ham repeaters in the east and west that this might not fly with the FCC. Can you imagine the possible interference this might cause with the Air Force?

A quick Google search show several surplus outfits selling these things.

Having used them in the military, I can't imagine why a ham would
want one these days.

They are also overpriced in my opinion.

> > filling up warehouses.

I'm interested in more detail about how different people see "the
Citizen's Band fiasco.

IMHO, what happened was that FCC created UHF CB in 1948, and it went
OK except that its popularity was limited. This was because, in those
days, the good UHF equipment cost too much and the inexpensive UHF
equipment had pretty dismal performance.

So in 1958, FCC created 27 MHz CB, with the idea that the
equipment would be simpler and less expensive, while still giving
adequate performance for the intended uses. And it worked - for a
while.

But what FCC never counted on was that large numbers of people would
buy CB sets and simply ignore the regulations for CB. FCC could not
begin to adequately enforce the rules once the CB culture had become
one of simply ignoring them.

How do others see it?

> It's really more simple than that actually. At the end of World
> War Two, every one thought, "Well, that's the end of that. There
> will NEVER be another war now."

Well, the WW2 veterans I have known didn't think that way. But that's
really a minor thing.

> The military planners were looking at another 8 years of combat
> in the Pacific and on the island of Japan to bring a conclusion
> to World War Two. When the second atomic bomb was
> dropped, Japan
> threw in the towel and quit.

Do you have a source for the 8 years figure? From what I have read, and veterans' accounts, the invasion of Japan was expected to take a year or so, with enormous casualties on both sides.

But as you said, the atomic bomb, plus continued conventional bombing and the near-blockade by USN submarines, made all that pretty academic.

One WW2 veteran I knew well, who was in 7th Air Force B-24s, had 13 missions to Japan when the war ended. It took 40 missions to get rotated home, and he said that even in mid-1945 the chances were 1 in 3 a B-24 crew would not survive 40 missions.

> With the rather sudden end of the war with Japan, that left stocks
> for the planned additional 8 years of warfare with no place to use
> it.

Agreed, whether it was for 1 year or 8 years. Plus a lot of stuff was being made for Lend-Lease.

> So there really was more "war surplus" stuff available at the end
> of World War Two.
>
> Most of the equipment used in Europe was left behind or just thrown
> off of ships etc rather than bring it back. Or we would still be
> seeing equipment for sale.

I don't know if that's really true. From the veterans I have known some stuff was left behind, of course, because occupation troops still needed some things. But after May 1945, usable stuff from the European and other theatres was shipped back to the US for use in the invasion of Japan.

When the war ended suddenly, there whole supply chain was full of stuff in all stages of completion.

Remember that while the war ended in 1945, we were still seeing WW2 surplus for sale 25+ *years* later.

> By the time Vietnam was over, the military, having found
> themselves
> fighting an enemy that didn't have any problems using our own
> equipment, they decided "No, that's not gonna happen again" and > the
> move towards "demilitarizing" equipment rather than just
> auctioning
> it off by the pallet, or disposing it like the last time around.

Yep - but there's more to the story.

WW2 required enormous quantities of equipment, and American industry was almost totally dedicated to war production. For just one example, almost 20,000 B-24 bombers of various suffixes were produced in less than 5 years, which means 20,000 complete radio sets plus spares for them. And that's just one kind of airplane!

Korea, Vietnam and other conflicts were simply not on that scale.

In addition, much of the hardware produced for WW2 was essentially obsolete when the war ended. Piston-engine propeller fighter aircraft were already being replaced by the first-generation jets by 1945, for example. The use of HF for short-range radio was being replaced by VHF. Radar had gone through several generations during the war; in 1941 a 112 MHz radar was state-of-the-art, while in 1945 there were 10 GHz sets in mass production.

So there was a lot of old stuff in warehouses and in the supply chain to be disposed of.

Perhaps the biggest factor is simply this: A lot of WW2 surplus gear was easily adapted to ham use. A BC-342 receiver, for example, could be easily adapted for use in the ham shack. While it might not have been state-of-the-art even in 1946, it was a dern good ham rx for $50-70.

But later surplus, when we hams could get it, wasn't so easily used as ham gear. And it wasn't nearly so inexpensive.

That's an interesting comment....

How could an amateur radio advocacy organization be more effective?
Unlike the NRA, there's no radio-equivalent to the Second Amendment.

As for the ARRL being "weak and ineffectual", note the recent court decision on FCC's actions wrt BPL. That required taking the FCC to court, which is a pretty bold and risky move. Or note how FCC ruled against those motorsports' use of 440 - ARRL had a big role in that.

Sure, ARRL doesn't always win, but neither does the NRA.

Most of all, I don't see the ARRL as "FCC's compliant and obsequious lapdog". Time after time, ARRL has opposed FCC on issues affecting amateur radio.

What would you have an advocacy group do differently, given the limited number of US hams?

RESCUE RADIO: SURVEY SAYS TECHNOLOGY PARAMOUNT TO PLANNERS AND FIRST RESPONDERS

First responders say that responding to a major disaster is their top worry and technology plays a key role in planning. Bill Pasternak, WA6ITF, has more:

--

The May issue of Popular Communications Magazine says that sixty five percent of 200 public safety officials and first responders cited the ability to respond to natural disasters as a top concern. This, in response to a nationwide survey conducted jointly by the Association of Public Safety Communications Officials and telecommunications manufacturer Motorola.

The survey revealed that in the area of interest in new technology, some 47 percent of those surveyed had interested in new satellite tracking technology. Another 41 percent said automatic license plate recognition was a paramount issue.

Regarding the area of communications, given a hypothetical funding increase for their departments, public safety officials seemed to agree that almost as much needed to be spent on communications technologies than on training of personnel. Communications improvements were only topped by the need for additional personnel.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

RADIO LAW: FCC REFUSES PETITION TO EXPAND 2 METER REPEATER SUBBANDS FOR DIGITAL OPERATIONS

I'm Burt Hicks, WB6MQV, with late breaking news. Dateline Washington D-C where the Federal Communications Commission on May 7th denied a petition filed by two California hams asking that an additional repeater subband be created on 2 meters. This, ostensibly to permit the introduction of digital voice repeaters in areas where no spectrum exists for them.

In the petition for Rule Making filed last October 10th, Ken D. Chafin, W6CPA, and Leon J. Brown, KC6JAR, Commission amend its rules to allow repeater stations to transmit in the 145.5 to145.8 MHz segment of the 2 meter amateur band. This, in addition to the 2 meter frequency segments currently authorized for repeater station operation. In their petition Chafin and Brown argued that additional spectrum is needed for repeater stations because some amateur repeater stations have begun using certain digital communication protocols, and "digital voice operation is incompatible with existing analog operations . This, because digital voice users are unable to determine if the desired frequency is in use by analog users and can inadvertently cause harmful interference to those users. The pair also argued that coordinating groups have been unable to separate analog and digital voice repeater operations to avoid harmful interference because the available repeater spectrum in the 2 meter band is fully occupied by existing analog users in most metropolitan areas."

After consideration of their request, the agency concluded that the Petition does not present grounds for the Commission to propose to amend its rules. That repeater stations are authorized to transmit on any frequency in the 2 meter band except the 144.0 to 144.5 MHz and 145.5 to146.0 MHz frequency segments. These two segments were excluded to minimize the possibility of harmful interference to other amateur service stations and operating activities, especially "weak signal" operations. The FCC says that allocating an additional three hundred kilohertz of the 2 meter band to repeater operation would not be consistent with that concern. Rather, it would likely result in increased interference to non-repeater stations.

Moreover, to the extent that the petition proposes a separate frequency segment for use by digital but not analog repeater stations, the FCC note that when the Commission has previously addressed the issue of interference between amateur stations engaging in different operating activities, it has declined to revise the rules to limit a frequency segment to one emission type in order to prevent interference to the operating activities of other amateur radio service licensees Rather, the Commission noted that

interference between amateur stations is already addressed by Section 97.101(b) and (d) of the Commissions Rules. These require amateur licensees to cooperate in selecting transmitting channels and in making the most effective use of amateur frequencies, provide that no amateur frequency will be assigned for the exclusive use of any station allocated to the Amateur Radio Service, and prohibit operators from willfully or maliciously interfering with or causing interference to any radio communication or signal.

The bottom line. The FCC says no new repeater subband will be created to cater to the desires of digital voice operators. Rather, those wanting to use this or any other emerging modes will have to do so within the context of the existing Amateur Services rules. Rules that say repeaters, be they analog or digital have to stay in their own R-F back yards and operate in a way as to cause no interference to other users of bands where repeater and non repeater operations both exist. It also might be viewed as a kind of subliminal warning to coordinators who are considering putting digital voice repeaters in spectrum outside of established repeater subbands to reconsider and not make such a move. (FCC)

HAM RADIO IN SPACE: 7 NEW CUBESAT - HAMSATS ALL OK

The April 28th launch of 10 satellites aboard an Indian Space Research rocket put 7 amateur radio cubesats and 3 commercial scientific birds into space. Telemetry indicates that all solar panels and antennas have properly deployed. Other telemetry shows values for all on orbit housekeeping activities are normal. More on these birds is on line at the U-R-L in this weeks printed Newsline report.

An excellent source of information for each of these satellites can be found at: http://space.skyrocket.de/index_frame.htm (scroll down to the April 28 data). Also see Ralph W0RPK Cubesat Webpage at: http://showcase.netins.net/web/wallio/CubeSat.htm. (ANS)

THE BPL WAR: NEWSPAPER REPORTS "BPL PLAN IS DEAD IN DALLAS

Broadband Over Powerline or B-P-L appears to be a dead issue in Dallas, Texas.

The ARRL quotes a Dallas Morning News report that a plan for using power lines to deliver Internet service to 2 million area homes collapsed. This after Current Group, LLC announced plans to sell its Dallas B-P-L network for $90 million to Oncor.

Oncor is a regulated electric distribution and transmission business that reportedly has no plans to offer Internet service. Instead it will use the network to detect power distribution monitoring.

Current originally touted the network as a way to offer Internet service to its consumers and had entered into a marketing arrangement with DirecTV. DirecTV customers who get Internet service through Current's network will probably lose service when the deal goes through.

Dallas and Houston are the only metropolitan areas in Texas with BPL Internet access to customers homes. Austin had also considered the use of B-P-L but decided against it.

More is on-line at <http://www.dallasnews.com/sharedcontent/dws/bus/stories/DN-current_02bus.ART.State.Edition1.460d413.html>http://www.dallasnews.com/sharedcontent/dws/bus/stories/DN-current_02bus.ART.State.Edition1.460d413.html

BREAKING DX NEWS: MARKET REEF WILL BE ON IN JULY

Some breaking news in the world of D-X. Word has been released that six well known operators will activate Market Reef between from July 11th to the 14th . The expedition is time so that the operators will be able to take part in the I-A-R-U High Frequency World Championship event on July 12th and 13th.

The group says that it will have three stations on the air on 160 through 6 meters. All operators will use their home calls portable Oh J Zero before and after the IARU Contest, except for O-H-1-V-R who will use O-J-Zero-V-R. QSL each station to his or her home calls and O-J-Zero-V-R via OH1VR.

A special callsign for the contest has been applied for and is not yet known. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

RADIO LAW: COMPANY WANTS TO TRANSMIT DRM IN ALASKA

Digital Aurora Radio Technologies has applied to the FCC to use Short Wave Digital Radio Mondiale in Alaska. A report on the 26 MHz D-R-M site at www.26mhz.us say that the company has applied to the FCC for authorization to experiment with statewide DRM in the 5, 7 and 9 MHz shortwave bands. While no specific frequencies are mentioned the company says that its ultimate goal of this project is to provide a terrestrial digital radio service to the citizens of Alaska.

A unique element of the proposed station is its use of government surplus over-the-horizon radar transmitters for the project. Tests by the system manufacturer, Continental Electronics, demonstrated the capability of the transmitter to broadcast Digital Radio Mondiale with excellent performance characteristics and within the spectral mask recommended by the ITU for this mode

The FCC has assigned the callsign WE2XRH to this station, but its license was pending at the time of this writing. Digital Aurora Radio Technologies is home based in Delta Junction Alaska, approximately 130 miles southeast of Fairbanks. Digital Radio Mondiale or DRM is an open, non-proprietary digital standard for sound and data broadcasting, world-wide. (Southgate)

RESCUE RADIO: THE VOIP HURRICANE NET WANTS YOU

If you are skilled in emergency communications then the Voice over Internet Protocol or VoIP Hurricane Net wants you.

According to a press release the VoIP Net Management team is looking for operators from any geographic area to maintain a net for as long as emergency communications are required before, during and shortly after hurricanes. This could be up to 24 hours a day and sometimes for several days.

Net Control Operators from the Pacific, Asia, Australia, New Zealand and other international areas are also very essential. They play a critical role in assisting net operations during the overnight hours of a North American activation during their local daytime. This, by providing North American controllers a rest period during their normal overnight hours. Also needed are hams fluent Spanish in order to further support operations in South and Central America, Mexico and Puerto Rico.

The net management team will be offering control operator training in the coming weeks. If you're interested please contact Rob Macedo, KD1CY, who is the Director of Net Operations or Scheduler Jim Palmer, KB1KQW who is the nets weekly Activation Net Control. Both are good in the callbook or at QRZ.com.

The VoIP Hurricane Net was created in 2002. It serves as a support network providing services to WX4NHC. Thats the amateur radio station at the National Hurricane Center in Miami, Florida. (VOPI Net Release)

**

RESCUE RADIO: FCC WANTS CELL SITES TO HAVE EMERGENCY POWER

The government wants every cellular telephone tower in the country to have at least 8 hours of battery or other power backup at every one of the nations cellular tower and other receive and transmit sites, but it has not addressed how the cell phone infrastructure will be able to handle the millions of calls that might be expected during a man made or natural disaster. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The FCC says that when Hurricane Katrina hit the Gulf Coast in 2005, wind and flooding knocked out power to hundreds of cell towers and cell sites. This says the regulator lead to the silencing of wireless communication

exactly when emergency crews and victims needed it.

To avoid similar telecommunications collapse in the future, the Federal Communications Commission wants cellular transmitter sites in the U.S. to have at least eight hours of backup power in the event mains power fails. Several cellular service providers agree that their networks need to become more resilient to disaster, but they oppose the FCC's backup power regulations, claiming they were illegally drafted and would present a huge economic and bureaucratic burden.

A federal appeals court in Washington, D.C., has already placed put the new regulations on hold while it considers an appeal by some in the wireless industry. But the FCC is expected to fight hard to get its way. The agency says that the need for backup power at cell sites in the event of emergencies has been made abundantly clear by recent events, and the cost of failing to

have such power may be measured in lives lost.

There is one fallacy with the FCC argument. While battery power at cell sites might keep them operational unless the tower falls or the site is totally destroyed, it does not mean that very many calls would get through. The very nature of the cellular telephone infrastructure is rather fragile and was not developed to be a stand alone emergency communications system. Thats because its open for anyone, anywhere to use 24 hours a day.

What the FCC has yet to address is how to handle the call volume that would likely bring cellular service to a halt if an emergency like the agency is describing were to come to pass. An emergency where a decentralized two way radio system would likely be the only form of communications system to survive. An emergency communications system such as that provided free of charge by radio amateur across the United States and world wide.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

There are almost 210,000 cell towers and roof-mounted cell sites across the country and carriers have said many would require some modification. At least one industry estimate puts the price tag for an 8 hour back up power system at up to $15,000 each. (Published reports)

**

PUBLIC SERVICE: SOUTHWEST MISSOURI SKYWARN AT EMNERGENCY EXPO

Hams who are active in the Southwest Missouri SKYWARN network along with the National Weather Service, demonstrated what they do during the Family Preparedness Festival on Saturday, May 3rd at the Springfield Expo Center. The display was part of an emergency expo sponsored by Convoy of Hope and the Springfield, Missouri Chamber of Commerce.

The Southwest Missouri SKYWARN group handed out packets of information from the National Weather Service on severe weather spotting and safety . They

also had a tornado simulator operational and screened videos of tornadoes and severe thunderstorms taken from the field.

Ham radios and other specialized equipment used in severe weather spotting was in full operation for public viewing. Information was available to anyone looking to become a ham radio operator and the needed training to participate in SKYWARN. (eHam)

**

PUBLIC SERVICE: NEW POLL - ARE THEY COMING OUR WAY

Bill Morine, N2COP, says that for the first time in several years, his local club in Williamgton, North Carolina, has been asked by two non-profit groups to provide communications for events. The first was the local air show where there were 10 hams helped to coordinate a crowd of 20,000. The second is an upcoming local YMCA group that will be hosting a 1,300 participant triathlon in November.

Accordong to Bill, in both cases, staff members said they had approached cellular service providers which had supplied phones to their events since the 1990s. The cell carriers said they didn't want to any longer donate phones or air time to the events

Bill says that if this trend is true, it can re-open public service opportunities and media exposure for amateur radio. He and we are curious if anyone else out there is witnessing the same thing. Please check the on-line polls area at www dot arnewsline dot org to respond. (N2COP, ARNewsline")

NAMES IN THE NEWS: 5TH ANNUAL ARMAD ON MAY 24

May is Military Appreciation Month and the fifth annual Amateur Radio Military Appreciation day -- better known as ARMAD -- will take place May 24th.

ARMAD is an award winning event and live forum involving Amateur Radio Operators from around the world to spread messages of support for our Military Veterans, and Active Duty Members.

A non-political Amateur Radio Project that has grown rapidly, ARMAD has received recognition and support from many local communities and national organizations.

ARMAD encourages our Amateur Radio Operators from our communities to gather at public venues such as shopping malls, parks, VA Hospitals and sporting events, to allow the public to express verbal positive support live over two way radio for members of the Military, Veterans, Reserves, National Guard, and Military Support Groups.

ARMAD has produced a public service spot suitable for airplay on any radio station. We've heard it and its great. For more information please visit

www.armad.net. (armad)

**

NAMES IN THE NEWS: GW1FKY CALL IS IN SPACE

The Southgate News reports that Ken Eaton GW1FKY had always dreamed of one day flying in space. Now, thanks to the Technical University of Delft, GW1FKY is orbiting the earth. At least he is vicariously. The story goes like this.

When the team building the Delfi-C3 satellite, attended the AMSAT-UK International Space Colloquium they made a very generous offer to help boost AMSAT-UKs satellite building fund. They decided to allow one Amateur's callsign to fly in space onboard their satellite. This chance to have your call sign fly on the satellite was auctioned at the Annual AMSAT-UK Dinner and there was fierce bidding to win this privilege. Ken Eaton GW1FKY was the winner and his call sign was put into Delfi-C3 and has now been launched into Earth orbit. (Southgate)

**

HAMVENTION NEWS: DAYTON EXECUTIVE HOTEL CLOSES

Turning to Hamvention related news, word that the Dayton Executive Hotel, a 253-room hotel on Needmore Road, has closed. WHIO-TV reported Tuesday, April 29th that the hotel, that the hotel has 231 rooms, but it was only about 10 percent booked. Former employees told the station that mainly construction workers were their guests at the present time.

In relation to the Dayton Hamvention, the Dayton Executive Hotel was one of the closest to the Hara Arena. Located at the Needmore Road exit of Interstate 75, it was mainly frequented by smaller vendors and flea market sellers who wanted to stay as close to the Hara complex.

At airtime its unknown as to how many Hamventiuon goers, if any, will be affected by the Dayton Executive Hotel closure. (News reports)

THE SOCIAL SCENE: 350 ATTEND EMCOMMWEST IN RENO

Emcommwest, an ARRL Specialty Convention sported a record crowd of over 350 people this year in Reno, Nevada.

Keynote speaker, Dennis Dura, K2DCD Emergency Preparedness and Response Manager from the ARRL said that he was delighted with the convention and that he just may have to make this event one of his regular visiting sites.

Riley Hollingsworth, K4ZDH special council of the FCCs enforcement Bureau, who thanked amateur radio emergency communicators for their hard work with disasters and for assisting many served agencies. He said that amateurs should be commended for their work in support to their nation and local communities.

Mr. Ham Radio, Gordon West, WB6NOA came in from southern California, as a forum presenter and banquet speaker. His presentation kept the capacity crowd on their toes as he did one of his famous presentations, this time with a piece of smoking gear, allegedly purchased at the Saturday morning swap meet. This was one of the highlights of the weekend.

Emcommwest will be back next year May 1-3 once again in Reno. For pictures of the event, check the website at www dot emcommwest dot org. (Emcommwest)

CHANGING OF THE GUARD: FORMER K7ANQ - AGE 99 - SK

99 year old former Alaska resident Lily Osterback Alford, the former K7ANQ, died April 24th at home in Lake Stevens, Washingtron.

According to the Anchorage Daily News, it was in the 1930's that newspapers labeled Lily as the 'Queen of the North.' because she had the ability to communicate with people all over the world on the family's homemade transmitter and receiver.

According to family members Lily was half Aleut. Her greatest moment of fame came in the early 1930s as the only 'Indian Girl' in the United States to hold a ham radio license at that time.

A memorial celebration of the life of Lily Osterback Alford was held at the Bitterlake Community Center in Seattle, Washington. (Anchorage Daily News)

**

EMERGING TECHNOLOGY: INTERNET INTO THE JET BLUE

The Internet is taking to the sky and its using radio to do it. Jim Damron, N8TMW, has the details:

--

JetBlue Airways will be teaming up with Research in Motion and Yahoo to provide free e-mail and instant messaging on its flights. Network World says that this means that there are now at least four airlines with announced plans to experiment with in-flight broadband connectivity. Others involved in bringing passengers a similar service include American Airlines, Alaska Airlines and the newly formed Virgin America.

What does not seem to be on the table at this time is in-flight cellular telephone use. While many business people believe it would be advantageous to be able to conduct deals from on high, others in the general public say that they do not want to be annoyed by someone chatting away coast to coast as they try to grab a few hours of sleep. So for now it looks as if text messaging and maybe Internet browsing will be the first major step in bringing the Internet to the sky.

From Charleston West Virginia, I'm Jim Damron, N8TMW, reporting.

--

Look for more airlines to jump on board the inflight web access band-wagon before years end. (Science OnLine)

WORLDBEAT - ITALY: ITALIAN HAMS GET 4 METER BAND

Italy's Ministry of Communications has authorized Italian amateurs to use three spot frequencies on the 4 meter or 70 MHz band. All modes are permitted at a maximum of 25 watts effective radiated power on 70.100, 70.200 and 70.300MHz, plus or minus 25 kHz. This experimental allocation runs until December 31, 2008. Further information can be found at www.space.it/70MHz. (SouthgaTE)

**

WORLDBEAT - UK: RSGB COMPLETES MOVE TO NEW HQ

The Radio Society of Great Britain has completed its relocation to its new headquarters in Bedford and is fully operational. The Bedford office is purely administrative and will not be open to visitors.

A new visitors center, the RSGB Pavilion, will be set up at Bletchley Park. It will include the National Amateur Radio Library and Museum and the GB3RS shack. Bletchley Park is an estate located in the town of Bletchley, in Buckinghamshire. During World War II, it was the location of the United Kingdom's main Nazi axis code-breaking operation.
